

## VIII Semester

| <b>GREEN CHEMISTRY</b>   |   |             |     |
|--|---|-------------|-----|
| Course Code  | <b>21BSC81</b>  | CIE Marks   | 50  |
| Teaching Hours/Week (L: T:P: S)  | 2:2:0   | SEE Marks   | 50  |
| Total Hours of Pedagogy  | 40  | Total Marks | 100 |
| Credits  | 03  | Exam Hours  | 03  |
| Course Learning Objectives:  |   |             |     |
| CLO 1  | Discuss about the role of principles of green chemistry.  |             |     |
| CLO 2  | Explain the importance of green synthesis.  |             |     |
| CLO 3  | Interpret the knowledge of prevention of hazardous chemicals in reactions.  |             |     |
| CLO 4  | Evaluate the efficiency of green catalysts.   |             |     |
| CLO 5  | Interpret the use of biocatalysts.  |             |     |
| <b>Pedagogy (General Instructions)</b>   |   |             |     |
| These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.  |   |             |     |
| These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.  |   |             |     |
| 1. Lecturer method (L) does not mean only traditional lecture method, but different type of teaching methods may be adopted to develop the outcomes.   |   |             |     |
| 2. Show Video/animation films to convince abstract concepts.   |   |             |     |
| 4. Encourage collaborative (Group Learning) Learning in the class  |   |             |     |
| 5. Ask at least three HOTS (Higher order Thinking) questions in the class, which promotes critical thinking  |   |             |     |
| 6. Adopt Problem Based Learning (PBL), which fosters students' Analytical skills, develop thinking skills such as the ability to evaluate, generalize, and analyse information rather than simply recall it.   |   |             |     |
| 7. Topics will be introduced in a multiple representation.   |   |             |     |
| 8. Show the different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them.   |   |             |     |
| 9. Discuss how every concept can be applied to the real world - and when that's possible, it helps improve the students' understanding.  |   |             |     |
| <b>Module-1 Introduction to Green Chemistry</b>  |   |             |     |
| Basic introduction and explaining goals of Green Chemistry. Limitations/Obstacles in the pursuit of the goals of Green Chemistry, Principles of Green Chemistry with their explanations and examples and special emphasis on Designing a Green Synthesis using these principles.   |   |             |     |
| <b>Pedagogy</b>  | <b>Chalk and talk/power point presentation:</b> Basic introduction and explaining goals of Green Chemistry.             |             |     |
|  | <b>Videos/Learning material:</b> Principles of Green Chemistry with their explanations and examples.                    |             |     |
|  | <b>Self-study:</b> Phase transfer catalysts.  |             |     |
| <b>Module-2 Green Solvents in Organic Synthesis</b>  |   |             |     |
| Green Solvents, Supercritical fluids (SCFs), Super Critical Water (SCW), Supercritical Carbon Dioxide (SC-CO <sub>2</sub> ); Pyrolysis of t-butylbenzene, Pinacol-pinacolone rearrangement, Beckmann rearrangement, Diels-Alder reactions, Reduction of aromatic nitro compounds. Reaction in Supercritical Carbon Dioxide; Kolbe – Schmitt reaction, Friedel–Crafts reaction. |   |             |     |
| <b>Pedagogy</b>  | <b>Chalk and talk/power point presentation:</b> Green Solvents, Supercritical fluids (SCFs), Super Critical Water (SCW) |             |     |
|  | <b>Videos/Learning material:</b> Pyrolysis of t-butylbenzene, Pinacol-pinacolone  |             |     |

|   |  |
|---|--|
|   | rearrangement, Beckmann rearrangement, Diels-Alder reactions.<br><b>Self-study:</b> Epoxidation reaction.  |
| <b>Module-3 Solvent free reactions (Solid State Synthesis)</b>  |  |
| Solid state reaction at room temperature: Aldol condensation, Reformatsky reaction, Synthesis of quinoxaline derivatives.<br>Microwave assisted solid state reactions using solid support: Synthesis of heterocyclic compounds; Synthesis of benzimidazole, Synthesis of oxazoles/thiazoles, Synthesis of oxadiazoles, Synthesis of N-arylated pyrrole derivatives, Synthesis of quinolones, Synthesis of furans.   |  |
| <b>Pedagogy</b>   | <b>Chalk and talk/power point presentation:</b> Solid state reaction at room temperature: Aldol condensation, Reformatsky reaction, Synthesis of quinoxaline derivatives.<br><b>Videos/Learning material:</b> Microwave assisted solid state reactions using solid support: Synthesis of heterocyclic compounds; Synthesis of benzimidazole, Synthesis of oxazoles, Synthesis of oxadiazoles.<br><b>Self-study:</b> Synthesis of thiazoles   |
| <b>Module-4 Catalysis and Green Chemistry</b>   |  |
| Catalyst and Catalysis; Homogeneous catalysis, Heterogeneous catalysis, Catalysis in Green chemistry, Biocatalysis, Reactions using biocatalyst, Biocatalytic conversion of penicillin to 6-aminopenicillanic acid.<br>Photocatalysis, Titanium dioxide (TiO <sub>2</sub> ) as a green photocatalyst for destroying organic pollutants, Some important photocatalytic applications of TiO <sub>2</sub> - Photocatalytic disinfection or sterilization.<br>Polymer supported catalysis - Reaction using polymer supported catalyst, Substitution reaction. |  |
| <b>Pedagogy</b>   | <b>Chalk and talk/power point presentation:</b> Catalyst and Catalysis; Homogeneous catalysis, Heterogeneous catalysis, Catalysis in Green chemistry, Some important photocatalytic applications of TiO <sub>2</sub> - Photocatalytic disinfection or sterilization<br><b>Videos/Learning material:</b> Biocatalysis, Reactions using biocatalyst, Biocatalytic conversion of penicillin to 6-aminopenicillanic acid.<br>Photocatalysis, Titanium dioxide (TiO <sub>2</sub> ) as a green photocatalyst for destroying organic pollutants<br><b>Self-study:</b> Polymer supported catalysis - Esterification reaction |
| <b>Module-5 Future trends in Green Chemistry</b>  |  |
| Introduction; Oxidation-reduction reagents and catalysts; Biomimetic, multifunctional reagents; Combinatorial green chemistry; Proliferation of solvent less reactions; Non-covalent derivatization; Biomass conversion, co crystal controlled solid state synthesis (C2S3).  |  |
| <b>Pedagogy</b>   | <b>Chalk and talk/power point presentation:</b> Introduction; Oxidation-reduction reagents and catalysts<br><b>Videos/Learning material:</b> Biomimetic, multifunctional reagents<br><b>Self-study:</b> Biomass conversion, co crystal controlled solid state synthesis (C2S3)   |
| Course outcome (Course Skill Set)<br>At the end of the course the student will be able to:  |  |
| CO 1  | Describe about the principles of green chemistry with example.   |
| CO 2  | Explain the importance of green solvents.  |
| CO 3  | Brief significance of biocatalysis and Photocatalysis.   |
| CO 4  | Enumerate use of combinatorial green chemistry   |

**Assessment Details (both CIE and SEE)**

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE).

**Continuous Internal Evaluation:****Three Unit Tests each of 20 Marks (duration 01 hour)**

1. First test at the end of 5<sup>th</sup> week of the semester
2. Second test at the end of the 10<sup>th</sup> week of the semester
3. Third test at the end of the 15<sup>th</sup> week of the semester

**Two assignments each of 10 Marks**

4. First assignment at the end of 4<sup>th</sup> week of the semester
5. Second assignment at the end of 9<sup>th</sup> week of the semester Group discussion/Seminar/quiz any one of three suitably planned to attain the COs and POs for **20 Marks (duration 01 hours)**
6. At the end of the 13<sup>th</sup> week of the semester The sum of three tests, two assignments, and quiz/seminar/group discussion will be out of 100 marks and will be scaled down to 50 marks (to have less stressed CIE, the portion of the syllabus should not be common /repeated for any of the methods of the CIE. Each method of CIE should have a different syllabus portion of the course).

**CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.**

**Semester End Examination:**

Theory SEE will be conducted by University as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

1. The question paper will have ten questions. **Each question is set for 20 marks.**
2. There will be **2 questions from each module**. Each of the two questions under a module (with a maximum of 3 sub-questions), should have a mix of topics under that module. The students have to answer 5 full questions, selecting one full question from each module.

**Suggested Learning Resources:****Books**

1. Ahluwalia, V.K., Kidwai, M.R. New Trends in Green Chemistry, Anamalaya Publishers (2005).
2. Anastas, P.T. & Warner, J.K, Green Chemistry- Theory and Practical, Oxford University Press (1998).
3. Matlack, A.S. Introduction to Green Chemistry, Marcel Dekker (2001).
4. Cann, M.C. and Connely, M.E. Real-World cases in Green Chemistry, ACS (2000).
5. Ryan, M.A. and Tinneland, M. Introduction to Green Chemistry, American Chemical Society, (2002).
6. Lancaster, M. Green Chemistry: An Introductory Text RSC Publishing, Second Edition, 2010

| 7. Topics will be introduced in a multiple representation.   |   |                               |     |
| 8. Show the different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them.   |   |                               |     |
| 9. Discuss how every concept can be applied to the real world - and when that's possible, it helps improve the students' understanding.  |   |                               |     |
| <b>Module-1 Nuclear Chemistry</b>  |   |                               |     |
| Fundamental Particles of nucleus (nucleons), Concept of nuclides and its representation, Isotopes, Isobars and isotones (with specific examples), Force operating between nucleons (n-n, p-p, & n-p), Qualitative idea of stability of nucleus (n/p ratio).  |   |                               |     |
| <b>Pedagogy</b>  | <b>Chalk and talk/power point presentation:</b> Fundamental Particles of nucleus (nucleons), Concept of nuclides and its representation,<br><b>Videos/Learning material:</b> Isotopes, Isobars and isotones (with specific examples), Force operating between nucleons (n-n, p-p, & n-p)<br><b>Self-study:</b> Qualitative idea of stability of nucleus (n/p ratio).  |                               |     |
| <b>Module-2 Radiochemistry</b>   |   |                               |     |
| Natural and artificial radioactivity, interaction of radiation with matter, Radioactive disintegration series, Radioactive displacement law, Radioactivity decay rates and numericals, Half-life and average life, Nuclear binding energy, mass defect and calculation of defect and binding energy, numericals on half life period, Nuclear reaction, Spallation, Nuclear fission and fusion. |   |                               |     |
| <b>Pedagogy</b>  | <b>Chalk and talk/power point presentation:</b> Natural and artificial radioactivity, interaction of radiation with matter, Radioactive disintegration series, Radioactive displacement law, Radioactivity decay rates and numerical.<br><b>Videos/Learning material:</b> Half-life and average life, Nuclear binding energy, mass defect and calculation of defect and binding energy, numericals on half life period, Nuclear reaction, Spallation. |                               |     |

|  |  |
|--|--|
|  | <b>Self-study:</b> Nuclear fission and fusion.   |
| <b>Module-3 Nuclear Reactor</b>  |  |
| Fission energy, The Natural uranium reactor, the four factor formula- The reproduction factor K, the classification of reactor. Reactor power, Critical size of thermal reactor, excess reactivity & control, the Breeder reactor, The Indians nuclear energy programme, Reprocessing of spent fuel: Recovery of Uranium & Plutonium, Nuclear waste management.<br>Isotopes for nuclear reactors: Isotope separation, separation of selected isotopes, Plutonium.                      |  |
| <b>Pedagogy</b>  | <b>Chalk and talk/power point presentation:</b> Fission energy, The Natural uranium reactor, the four factor formula- The reproduction factor K, the classification of reactor. | <b>Module-4 Measurement of Nuclear Radiation</b>   |  |
| Activity and Counting Rate, basic principle and instrumentation of Gas-Filled Detectors , Ionization Chambers, Proportional Counters, Geiger–Müller Counters, Scintillation Detectors, Semiconductor Detectors, Choice of Detectors, Spectrometry.   |  |
| <b>Pedagogy</b>  | <b>Chalk and talk/power point presentation:</b> Activity and Counting Rate, basic principle and instrumentation of Gas-Filled Detectors , Ionization Chambers, Proportional Counters, Semiconductor, Spectrometry.<br><b>Videos/Learning material:</b> Geiger–Müller Counters, Scintillation Detectors<br><b>Self-study:</b> Detectors, Choice of Detectors  |
| <b>Module-5 Applications of radioactivity</b>  |  |
| Typical reaction involved in preparation of radioisotopes: $^3\text{H}$ , $^{14}\text{C}$ , $^{22}\text{Na}$ , $^{32}\text{P}$ , $^{35}\text{S}$ , and $^{137}\text{I}$ General principles of using radioisotopes. - Physical constants – Diffusion coefficients, surface area, solubility. - Analytical applications- neutron activation analysis, dilution analysis, radiometric titration. - Industrial applications – radiation gauging, friction and wear out, gamma radiography. |  |
| <b>Pedagogy</b>  | <b>Chalk and talk/power point presentation:</b> Typical reaction involved in preparation of radioisotopes: $^3\text{H}$ , $^{14}\text{C}$ , $^{22}\text{Na}$ , $^{32}\text{P}$ , $^{35}\text{S}$ , and $^{137}\text{I}$ General principles of using radioisotopes. - Physical constants – Diffusion coefficients, surface area, solubility. -<br><b>Videos/Learning material:</b> Analytical applications- neutron activation analysis, dilution analysis, radiometric titration. radiation gauging, friction and wear out, gamma radiography.<br><b>Self-study:</b> Industrial applications |

**Course outcome (Course Skill Set)**

At the end of the course the student will be able to:

|     |  |
|-----|--|
| CO1 | Demonstrate the concepts of nuclear and radiation chemistry.                                   |
| CO2 | Explain working of nuclear reactor   |
| CO3 | Identify the suitable instruments to be used in Measurement and detection of nuclear radiation |
| CO4 | Illustrate the applications of radio isotopes  |

**Assessment Details (both CIE and SEE)**

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 35% (18 Marks out of 50) in the semester-end examination (SEE).

**Continuous Internal Evaluation:****Three Unit Tests each of 20 Marks (duration 01 hour)**

1. First test at the end of 5<sup>th</sup> week of the semester
2. Second test at the end of the 10<sup>th</sup> week of the semester
3. Third test at the end of the 15<sup>th</sup> week of the semester

**Two assignments each of 10 Marks**

4. First assignment at the end of 4<sup>th</sup> week of the semester
5. Second assignment at the end of 9<sup>th</sup> week of the semester Group discussion/Seminar/quiz any one of three suitably planned to attain the COs and POs for **20 Marks (duration 01 hours)**
6. At the end of the 13<sup>th</sup> week of the semester The sum of three tests, two assignments, and quiz/seminar/group discussion will be out of 100 marks and will be scaled down to 50 marks (to have less stressed CIE, the portion of the syllabus should not be common /repeated for any of the methods of the CIE. Each method of CIE should have a different syllabus portion of the course).

**CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.**

**Semester End Examination:**

Theory SEE will be conducted by University as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

1. The question paper will have ten questions. **Each question is set for 20 marks.**
2. There will be **2 questions from each module.** Each of the two questions under a module (with a maximum of 3 sub-questions), should have a mix of topics under that module. The students have to answer 5 full questions, selecting one full question from each module.

## VIII Semester

| <b>ELECTROCHEMISTRY LAB</b>  |  |  |            |         |
|--|--|--|------------|---------|
| Course Code  | <b>21BSCL83</b>  |  | CIE Marks  | 50      |
| Teaching Hours/Week (L:T:P: S)   | 1:0:2  |  | /SEE Marks | 50      |
| Credits  | 02   |  | Exam Hours | 3 Hours |
| CLO 1  | Understanding the applications of redox reactions in the determination of strength of salts  |  |            |         |
| CLO 2  | Explain the transport number of ions in solution.  |  |            |         |
| <b>Experiments</b>   |  |  |            |         |
| <b>Sl. No</b>  |  |  |            |         |
| 1  | Determination of dissociation constant of a monobasic acid potentiometrically.   |  |            |         |
| 2  | Verification of Onsager's equation; Determine the equivalent conductance of a strong electrolyte at several dilutions.                                 |  |            |         |
| 3  | To determine the relative strength of two acids by conductance measurements.   |  |            |         |
| 4  | To determine the solubility of a sparingly soluble salts in water by conductance measurements.   |  |            |         |
| 5  | Conductometric determination of degree of hydrolysis and hydrolysis constant of (i) CH <sub>3</sub> COONa (ii) NH <sub>4</sub> Cl                      |  |            |         |
| 6  | Conductometric titration of very weak acid like phenol.  |  |            |         |
| 7  | To determine transport number of Cu <sup>2+</sup> and SO <sub>4</sub> <sup>2-</sup> by Hittorf's method.   |  |            |         |
| 8  | Potentiometric titration of antipyretic drug (Paracetamol) in different solvent media like Acetic acid and Dimethylformamide.                          |  |            |         |
| 9  | Assay of active pharmaceutical ingredient; analysis of purity of sulphanilamide in sulpha drugs potentiometrically using standard potassium bromide.   |  |            |         |
| 10   | Assay of active agents in surfactants; analysis of Lidocaine hydrochloride in ointment potentiometrically by using standard sodium hydroxide solution. |  |            |         |
| <b>Course outcomes (Course Skill Set):</b>   |  |  |            |         |
| At the end of the course the student will be able to:  |  |  |            |         |
| <b>CO1</b> Determine the dissociation constant, drug concentration potentiometrically.   |  |  |            |         |
| <b>CO2</b> Determine the relative strength of two acids, degree of hydrolysis and hydrolysis constant of salts conductometrically.   |  |  |            |         |
| <b>CO3</b> Determine the pharmaceutical ingredients potentiometrically.  |  |  |            |         |
| <b>Assessment Details (both CIE and SEE)</b>   |  |  |            |         |
| <b>Continuous Internal Evaluation (CIE):</b> The CIE marks awarded in case of Practical shall be based on the weekly evaluation of laboratory journals/ reports after the conduction of every experiment and one practical test. |  |  |            |         |

**Semester End Evaluation (SEE):** The practical examinations to be conducted as per the time table of University in a batch wise with strength of students not more than 10-15 per batch.

1. All laboratory experiments are to be included for practical examination.
2. Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.
3. Students can pick one experiment from the questions lot prepared by the examiners.
4. Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero.

**Books:**

1. Vogel's Textbook of Practical Organic Chemistry, 5th Edition, Pearson Education India, 2003.
2. Mann, F.G. & Saunders, B.C. Practical Organic Chemistry, Pearson Education, 2009.
3. Yadav, J. B; Advanced Practical Physical Chemistry, Goel Publishing House, Meerut, 2002. 21<sup>st</sup> Ed.,
4. Furniss, B.S.; Hannaford, A.J.; Smith, P.W.G.; Tatchell, A.R. Practical Organic Chemistry, 5th Ed., Pearson (2012).
5. Mendham, J., A. I. Vogel's Quantitative Chemical Analysis 6<sup>th</sup> Ed., Pearson, 2009.

2. [https://www.youtube.com/results?search\\_query=conductometric+titration+of+strong+acid+vs+strong+base](https://www.youtube.com/results?search_query=conductometric+titration+of+strong+acid+vs+strong+base)

| <b>POLYMER CHEMISTRY AND COMPOSITE MATERIALS</b>  |  |             |     |
|---|--|-------------|-----|
| Course Code   | 21BSC841   | CIE Marks   | 50  |
| Teaching Hours/Week (L:T:P:S)   | 2:2:0  | SEE Marks   | 50  |
| Total Hours of Pedagogy   | 40   | Total Marks | 100 |
| Credits   | 3  | Exam Hours  | 3   |
| <b>Course Learning Objectives:</b>  |  |             |     |
| CLO 1: Understand the basics and significance of polymers, polymerization methods   |  |             |     |
| CLO 2: Explain the mechanism of polymerization, polymer processing and synthetic polymers   |  |             |     |
| CLO 3: Describe the polymer properties and elastomers   |  |             |     |
| CLO 4: Explain conducting polymers, biodegradable polymers and plastics management.   |  |             |     |
| CLO 5: Explain the manufacturing and uses of composites   |  |             |     |
| <b>Pedagogy (General Instructions)</b>  |  |             |     |
| These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.   |  |             |     |
| These are sample Strategies, which teacher can use to accelerate the attainment of the various course outcomes.   |  |             |     |
| 1. Lecturer method (L) does not mean only traditional lecture method, but different type of teaching methods may be adopted to develop the outcomes.  |  |             |     |
| 2. Show Video/animation films to convince abstract concepts.  |  |             |     |
| 4. Encourage collaborative (Group Learning) Learning in the class   |  |             |     |
| 5. Ask at least three HOTS (Higher order Thinking) questions in the class, which promotes critical thinking   |  |             |     |
| 6. Adopt Problem Based Learning (PBL), which fosters students' Analytical skills, develop thinking skills such as the ability to evaluate, generalize, and analyse information rather than simply recall it.  |  |             |     |
| 7. Topics will be introduced in a multiple representation.  |  |             |     |
| 8. Show the different ways to solve the same problem and encourage the students to come up with their own creative ways to solve them.  |  |             |     |
| 9. Discuss how every concept can be applied to the real world - and when that's possible, it helps improve the students' understanding.   |  |             |     |
| <b>Module-1 Polymers and methods of polymerization</b>  |  |             |     |
| Polymers and macromolecules – Monomers – Homo and hetero polymers – Copolymers - Classification based on the origin (natural, semi synthetic and synthetic), thermal behaviour (thermoplastics and thermosetting plastics), synthesis (addition and condensation), structure (linear, branched chain and cross linked) and intermolecular forces (elastomers, fibres, plastics and elastomers) – Tacticity. Methods of polymerization- Bulk polymerization, solution polymerization, Suspension polymerization and Emulsion polymerization. |  |             |     |
| <b>Pedagogy</b>   | <p><b>Chalk and talk/power point presentation:</b> Polymers and macromolecules – Monomers – Homo and hetero polymers – Copolymers -Classification based on the origin (natural, semi synthetic and synthetic), thermal behaviour (thermoplastics and thermosetting plastics), synthesis (addition and condensation), structure (linear, branched chain and cross linked) and intermolecular forces (elastomers, fibres, plastics and elastomers) – Tacticity.</p> <p><b>Videos/Learning material:</b> Methods of polymerization- Bulk polymerization, solution polymerization, Suspension polymerization and Emulsion polymerization.</p> <p><b>Self-study:</b> Importance of polymers, Polymerization, degree of polymerization</p> |             |     |
| <b>Module-2 Mechanism of polymerization and Polymer processing</b>  |  |             |     |

|   |   |
|---|---|
| Chain and step growth polymerizations – Free radical polymerization with mechanism taking polyethylene as example, Polymer Processing: Calendaring, Blow moulding, Extrusion moulding compression and injection moulding.   |   |
| Preparation, properties and uses of polyethylene (LDPE and HDPE), polystyrene, PVC, Teflon, and PMMA. Adhesives-Introduction, Types (natural and synthetic), synthesis, properties and uses of epoxy resin and phenol-formaldehyde resin.   |   |

Each method of CIE should have a different syllabus portion of the course).</p> <p><b>CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.</b></p> |  |

## VIII Semester

### **Semester End Examination:**

Theory SEE will be conducted by University as per the scheduled timetable, with common question papers for the subject (duration 03 hours)

1. The question paper will have ten questions. **Each question is set for 20 marks.**
2. There will be **2 questions from each module**. Each of the two questions under a module (with a maximum of 3 sub-questions), should have a mix of topics under that module. The students have to answer 5 full questions, selecting one full question from each module.

### **Suggested learning Resources:**

#### **Books**

1. Billmeyer F.W., Text book of polymer science, Jr. John Wiley and Sons, 1994.
2. Gowariker V.R., Viswanathan N.V. & Jayader Sreedhar, Polymer Science, Wiley Eastern Ltd., NewDelhi.
3. Sharma, B.K., Polymer Chemistry, Goel Publishing House, Meerut, 1989.
4. Arora M.G., Singh M. and Yadav M.S., Polymer Chemistry, 2nd Revised edition, AnmolPublications Private Ltd., New Delhi, 1989.
5. Maurice Morton, Rubber Technology- van Nostrand, Reinhold, New York.
6. J.A. Bryolson, Plastic materials.
7. R.P. Singh, C. K. Das & S. K. Mustafi, Polymer Blends &Alloys –an Overview, Asian Books Pvt. Ltd. 2002 (Ist Edn).
8. Joel R Fried, Polymer Science & Technology, (2nd Edn), Prentice-Hall of India, New Delhi.
