R		REACT	Semester	6	
Course Code		BCSL657B	CIE Marks	50	
Teaching Hours/Week (L:T:P: S)		0:0:1:0	SEE Marks	50	
Credits		01	Exam Hours	100	
Examir	nation type (SEE)	Practical			
Course objectives:					
•	• Enable students to develop React applications utilizing functional and class-based components, effectively				
managing state with hooks and lifecycle methods .					
<ul> <li>Introduce, now to pass data dynamically between parent and child components using props, ensuring modula</li> </ul>					
and reusable component design.					
Create dynamic and responsive applications, integrating forms, validation, task management systems, and style     components					
	Lise Deast Deuter for novigation	outornal ADI integration for dynamic data bandli	ng and CCC stuling t	tachniquae	
•	for modern LU/UX design	external API integration for dynamic data handli	ng, and CSS styling t	.echniques	
		Functionants			
	Use create react app to set up a t	experiments	aful component with	h usoStato	
1.	Add an input field and a $$ elev	ment that displays text based on the input Dynam	$\frac{1}{1}$	1 > content	
	as the user types.	nent that displays text bused on the input. Dynam	ieuny update the sh	17 content	
2.	Develop a React application that demonstrates the use of props to pass data from a parent component to child				
	components. The application shou	and include the parent component named App that	serves as the central	l container	
	Displays additional information	such as convright details or a tagline. Pass data (	e q title tagline or	ng. rooter.	
	information) from the App compo	opent to the Header and Footer components using	props Ensure that t	the content	
	displayed in the Header and Foote	r components is dynamically updated based on the	e data received from	the parent	
	component.			, and parone	
		Developed and the second secon	4 04 4 1 1 1	D: 1 /1	
3.	Create a Counter Application Usin	g React that demonstrates state management with	the useState hook. I	Jisplay the	
	Ensure the counter updates dyna	mically when the buttons are clicked. Use the	useState book to n	nanage the	
	counter's state within the compon	ent. Prevent the counter from going below a spec	ified minimum valu	ie (e.g., 0).	
	Add a "Reset" button to set the cor	unter back to its initial value. Include functionality	to specify a custom	increment	
	or decrement step value.	5	1 2		
	Develop a Ta Da List Application			Ctt	
4.	Develop a To-Do List Application	using React functional components that demons	trates the use of the	e usestate	
	de list Maintain a list of tasks usi	ng state. Drovide an input field for users to add	to manage and disp	ally rondor	
	the list of tasks below the input	field. Ensure each task is displayed in a user fri	andly manner Alley	any render	
	delete tasks from the list. Mark to	neid. Ensure each task is displayed in a user-in	enuly manner. Ano	w users to	
		isks as completed of pending, and visually different	indate them.		
5.	Develop a React application that o	lemonstrates component composition and the us	e of props to pass da	ata. Create	
	two components: FigureList: A	parent component responsible for rendering	multiple child cor	mponents.	
	BasicFigure: A child component	designed to display an image and its associate	d caption. Use the	FigureList	
	component to dynamically render	r multiple BasicFigure components. Pass image UF	Ls and captions as p	props from	
	the FigureList component to each	BasicFigure component. Style the BasicFigure con	nponents to display	the image	
	and caption in an aesthetically pl	easing manner. Arrange the BasicFigure compon	ents within the Figu	ureList in a	
	grid or list format. Allow users to	o add or remove images dynamically. Add hove	r effects or animation	ons to the	
	images for an interactive experient	nce.			
6	Design and implement a Poast E	orm that collects user input for name, email, ar	d password Form	Fields are	
0.	Name Email Descured Ensure	of the transmission of the second secon	ion Validata the com	ail field to	
	Name, Email, Passworu. Ensure a	an neius are nneu beiore anowing iorm submiss	on valuate the em	an neiù to	

	ensure it follows the correct email format (e.g., example@domain.com). Optionally enforce a minimum password length or complexity. Display error messages for invalid or missing inputs. Provide visual cues (e.g., red borders) to highlight invalid fields. Prevent form submission until all fields pass validation. Log or display the entered data upon successful submission (optional). Add a "Show Password" toggle for the password field. Implement client-side sanitization to ensure clean input.		
7.	Develop a React Application featuring a ProfileCard component to display a user's profile information, including their name, profile picture, and bio. The component should demonstrate flexibility by utilizing both external CSS and inline styling for its design. Display the following information: Profile picture, User's name, A short bio or description Use an external CSS file for overall structure and primary styles, such as layout, colors, and typography. Apply inline styles for dynamic or specific styling elements, such as background colors or alignment. Design the ProfileCard to be visually appealing and responsive. Ensure the profile picture is displayed as a circle, and the name and bio are appropriately styled. Add hover effects or animations to enhance interactivity. Allow the background color of the card to change dynamically based on a prop or state.		
8.	Develop a Reminder Application that allows users to efficiently manage their tasks. The application should include the following functionalities: Provide a form where users can add tasks along with due dates. The form includes task name,Due date,An optional description. Display a list of tasks dynamically as they are added. Show relevant details like task name, due date, and completion status. Include a filter option to allow users to view all Tasks and Display all tasks regardless of status. Show only tasks marked as completed. Show only tasks that are not yet completed.		
9.	Design a React application that demonstrates the implementation of routing using the react-router-dom library. The application should include the Navigation Menu: Create a navigation bar with links to three distinct pages, Home, About, Contact. Develop separate components for each page (Home, About, and Contact) with appropriate content to differentiate them. Configure routes using react-router-dom to render the corresponding page component based on the selected link. Use BrowserRouter and Route components for routing. Highlight the active link in the navigation menu to indicate the current page		
10	Design a React application featuring a class-based component that demonstrates the use of lifecycle methods to interact with an external API. The component should fetch and update data dynamically based on user interactions or state changes. Use the componentDidMount lifecycle method to fetch data from an API when the component is initially rendered. Display the fetched data in a structured format, such as a table or list. Use the componentDidUpdate lifecycle method to detect changes in the component's state or props. Trigger additional API calls to update the displayed data based on user input or actions (e.g., filtering, searching, or pagination). Implement error handling to manage issues such as failed API requests or empty data responses. Display appropriate error messages to the user when necessary. Allow users to perform actions like filtering, searching, or refreshing the data. Reflect changes in the displayed data based on these interactions.		
Course At the e	Course outcomes (Course Skill Set): At the end of the course the student will be able to: Illustrate Beact basics and state components		
•	Develop React applications that utilize component composition, passing data through props. Use dynamic state updates, event handling, and custom logic to increment, decrement, and reset state values.		

- Implement forms in React that collect and validate user input.
- Demonstrate interaction with external APIs, dynamic content generation and manage state in real-time applications.

#### Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

## **Continuous Internal Evaluation (CIE):**

CIE marks for the practical course are **50 Marks**.

The split-up of CIE marks for record/ journal and test are in the ratio **60:40**.

- Each experiment is to be evaluated for conduction with an observation sheet and record write-up. Rubrics for the evaluation of the journal/write-up for hardware/software experiments are designed by the faculty who is handling the laboratory session and are made known to students at the beginning of the practical session.
- Record should contain all the specified experiments in the syllabus and each experiment write-up will be evaluated for 10 marks.
- Total marks scored by the students are scaled down to **30 marks** (60% of maximum marks).
- Weightage to be given for neatness and submission of record/write-up on time.
- Department shall conduct a test of 100 marks after the completion of all the experiments listed in the syllabus.
- In a test, test write-up, conduction of experiment, acceptable result, and procedural knowledge will carry a weightage of 60% and the rest 40% for viva-voce.
- The suitable rubrics can be designed to evaluate each student's performance and learning ability.
- The marks scored shall be scaled down to **20 marks** (40% of the maximum marks).

The Sum of scaled-down marks scored in the report write-up/journal and marks of a test is the total CIE marks scored by the student.

### Semester End Evaluation (SEE):

- SEE marks for the practical course are 50 Marks.
- SEE shall be conducted jointly by the two examiners of the same institute, examiners are appointed by the Head of the Institute.
- The examination schedule and names of examiners are informed to the university before the conduction of the examination. These practical examinations are to be conducted between the schedule mentioned in the academic calendar of the University.
- All laboratory experiments are to be included for practical examination.
- (Rubrics) Breakup of marks and the instructions printed on the cover page of the answer script to be strictly adhered to by the examiners. **OR** based on the course requirement evaluation rubrics shall be decided jointly by examiners.

- Students can pick one question (experiment) from the questions lot prepared by the examiners jointly.
- Evaluation of test write-up/ conduction procedure and result/viva will be conducted jointly by examiners.

General rubrics suggested for SEE are mentioned here, writeup-20%, Conduction procedure and result in -60%, Viva-voce 20% of maximum marks. SEE for practical shall be evaluated for 100 marks and scored marks shall be scaled down to 50 marks (however, based on course type, rubrics shall be decided by the examiners)

Change of experiment is allowed only once and 15% of Marks allotted to the procedure part are to be made zero.

The minimum duration of SEE is 02 hours

# Suggested Learning Resources:

Books:

- 1. Beginning React JS Foundations Building User Interfaces with ReactJS: An Approachable Guide, Chris Minnick, Wiley publications , 2022.
- 2. Learning React Functional Web Development with React and Redux , Alex Banks, Eve Porcello · 2017
