## Third Semester Aeronautical/Aerospace Enge [Fluid Mechanics]

TIME: 03 Hours
Max. Marks: 100
Note: 01. Answer any FIVE full questions, choosing at least ONE question from each MODULE.

| Question No. | Description | Bloom's Taxonomy Level | CO | Marks |
| :---: | :---: | :---: | :---: | :---: |
| Module 1 |  |  |  |  |
| 01 (a) | Distinguish between manometers and mechanical gauges. What are the different types of mechanical gauges used explain briefly? | L1 | 3 | 8 |
| (b) | Prove that the intensity of pressure at a point in static field is equal in all directions. | L2 | 1 | 6 |
| (c) | What are the gauge pressure and absolute pressure at a point 3 m below the free surface of liquid having density of $1.53^{*} 10^{3}$ $\mathrm{kg} / \mathrm{m}^{3}$ if the atmospheric pressure is equivalent to 750 mm of mercury? The specific gravity of mercury is 13.6 and density of water is $1000 \mathrm{~kg} / \mathrm{m}^{3}$. | L3 | 2 | 6 |
| (OR) |  |  |  |  |
| 02 (a) | Prove that the rate of increase of pressure in a vertically downward direction must be equal to the specific weight of fluid at that point. | L2 | 1 | 8 |
| (b) | Prove that centre of pressure lies below the centre of gravity of vertically immersed plane surface in a static fluid. | L2 | 1 | 8 |
| (c) | A stone weighs 392.4 N in air and 196.2 N in water. Compute the volume of stone and its specific gravity | L3 | 2 | 4 |
| Module 2 |  |  |  |  |
| 03(a) | Derive the general three dimensional continuity equation and then reduce it to continuity equation for steady, two dimensional in compressible flow. | L2 | 1,2 | 12 |
| (b) | The velocity potential function is given by expression $\phi=-$ $x y^{3} / 3-x^{2}+x^{3} y / 3+y^{2}$ <br> i) find the velocity components in $\mathrm{x} \& \mathrm{y}$ directions. <br> ii)show that $\phi$ represents possible case of fluid flow. | L3 | 2 | 8 |
| (OR) |  |  |  |  |
| 04(a) | Derive an expression of energy equation in global form of conservation equation | L2 | 1,2 | 10 |
| (b) | Obtain an expression in differential form for navier stokes equations. | L2 | 1,2 | 10 |
| Module 3 |  |  |  |  |

| 05 (a) | Derive the Euler's equation of motion for steady flow and obtain Bernoulli's equation from it. State the assumptions made in derivation of Bernoulli's equation | L2 | 1,2 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| (b) | Explain a venturimeter. Derive an expression for discharge. Why venturimeter is better than orifice meter? | L2 | 1,2 | 10 |
| (OR) |  |  |  |  |
| 06 (a) | The pressure difference $\Delta \mathrm{p}$ in a pipe of diameter D and length 1 due to viscous flow depends on the velocity V , viscosity $\mu$ and density $\rho$. Using Buckingham's $\pi$ - theorem, obtain an expression for $\Delta \mathrm{p}$. | L3 | 2 | 10 |
| (b) | The resisting force R of supersonic plane during flight can be considered as dependent upon the length of the aircraft 1 , velocity V , air viscosity $\mu$, air density $\rho$ and bulk modulus of air k. express the functional relationship between these variables and resisting force. | L3 | 2 | 10 |
| Module 4 |  |  |  |  |
| 07 (a) | Derive an expression for a lift force on rotating cylinder which represents kutta- joukowsky equations? | L2 | 1,2 | 10 |
| (b) | What are the boundary layer conditions that must be satisfied by a given velocity profile in laminar boundary layer flows. | L2 | 2 | 10 |
| (OR) |  |  |  |  |
| 08 (a) | Obtain von karman momentum integral equation. | L2 | 2 | 10 |
| (b) | Air flows at $10 \mathrm{~m} / \mathrm{s}$ past a smooth rectangular flat plate 0.3 m wide 3 m long. Assuming that the turbulence level in the oncoming stream is low and that transition occurs at $\mathrm{Re}=$ $5^{*} 10^{\wedge} 5$, calculate ratio of total drag when the flow is parallel to the length of the plate to the value when flow is parallel to width | L3 | 2 | 10 |
| Module 5 |  |  |  |  |
| 09 (a) | Briefly explain the concept of propagation of disturbances in fluid and derive an expression for velocity of sound. | L2 | 1,2,3 | 10 |
| (b) | Show by means of diagrams the nature of propagation of disturbance in compressible flow when mach number is less than one, is equal to one and is more than one. | L3 | 1,2,3 | 10 |
| (OR) |  |  |  |  |
| 10(a) | State bernoulli's theorem for compressible flow. Derive an expression for bernoulli's equation when the process is isothermal process | L2 | 2 | 10 |
| 10(b) | Find the mach number when an aeroplane os flying at $1100 \mathrm{~km} / \mathrm{hr}$ through still air having pressure of $7 \mathrm{~N} / \mathrm{cm}^{2}$ and temperature $-5^{0} \mathrm{C}$. wind velocity may be taken as zero. Take R $=287.14 \mathrm{~J} / \mathrm{kgK}$. Calculate the pressure, temperature and density of air at stagnation point on the nose of the plane. Take $\mathrm{k}=1.4$ | L3 | 2 | 10 |

## [Fluid Mechanics]

Third Semester Aeronautical /Aerospace Engg. B.E. Degree Examination

TIME: 03 Hours
Max. Marks: 100

| Note: | 01. Answer any FIVE full questions, choosing at least ONE | questio |  | MODULE |
| :---: | :---: | :---: | :---: | :---: |
| Question No. | Description | Marks | CO | Bloom's Taxonomy Level |
| Module 1 |  |  |  |  |
| 1 (a) | What is temperature lapse rate? Obtain an expression for temperature lapse rate. | L2 | 2 | 8 |
| (b) | Prove that pressure and temperature for an adiabatic process at a height z from sea level for static air are <br> a. $\quad \mathrm{P}=\mathrm{P}_{0}\left[1-\left(\frac{\mathrm{k}-1}{\mathrm{k}}\right) \frac{\mathrm{gZ}}{\mathrm{RT} 0}\right]^{\mathrm{k} k-1}$ <br> b. $\mathrm{T}=\mathrm{T}_{0}\left[1-\left(\frac{\mathrm{k}-1}{\mathrm{k}}\right) \frac{\mathrm{gZ}}{\mathrm{RT} 0}\right]$ | L3 | 2 | 12 |
| (OR) |  |  |  |  |
| 02 (a) | Give reasons for the following: <br> a. Viscosity changes with temperature rise <br> b. Mercury is preferred in manometer liquid <br> c. Light weight objects can float on the free surface of liquid. <br> d. Free surface of water in capillary tube is concave | L1 | 1,2 | 8 |
| (b) | Explain the phenomenon of capillarity. Obtain an expression for capillary rise and capillary fall. | L2 | 2 | 8 |
| (c) | Determine the specific gravity of fluid having viscosity $0.005 \mathrm{Ns} / \mathrm{m}^{2}$ and kinematic viscosity $0.05 * 10^{-4} \mathrm{~m}^{2} / \mathrm{s}$. | L3 | 2 | 4 |
| Module 2 |  |  |  |  |
| 03(a) | A source and a sink of strength $4 \mathrm{~m}^{2} / \mathrm{s}$ and $8 \mathrm{~m}^{2} / \mathrm{s}$ are located at ($1,0) \&(1,0)$ respectively. Determine the velocity and stream function at a point $\mathrm{P}(1,1)$ which is lying on the flownet of the resultant streamline. | L3 | 2 | 10 |
| (b) | Obtain an equation of stream function \& potential function. Draw stream line and potential lines for source flow. | L2 | 2 | 6 |
| (c) | Given the velocity field, $V=5 x^{3} \mathrm{i}-15 \mathrm{x}^{2} \mathrm{yj}$, obtain the equation for streamlines. For above given velocity field, check for the continuity and irrotationality. | L3 | 2 | 4 |
| (OR) |  |  |  |  |
| 04(a) | Obtain an integral form and differential form of energy equation using control volume approach. | L2 | 2 | 10 |

| (b) | Derive the Navier stokes equations by control volume approach. Mention the applications of continuity, momentum and energy equations. | L3 | 2 | 10 |
| :---: | :---: | :---: | :---: | :---: |
| Module 3 |  |  |  |  |
| 05 (a) | The inlet and throat diameters of a horizontal venturimeter are 30 cm and 10 cm respectively. The liquid flowing through the meter is water. The pressure intensity at inlet is $13.734 \mathrm{~N} / \mathrm{cm}^{2}$ while the vacuum pressure head at the throat is 37 cm of mercury. Find the discharge of water through venturimeter. Take $\mathrm{C}_{\mathrm{d}}=0.98$. | L3 | 2 | 8 |
| (b) | Find discharge through a trapezoidal notch which is 1 m wide at the top and 0.40 m at the bottom and 30 cm in height. The head of water on the notch is 20 cm . Assume Cd for rectangular portion $=0.62$ while for triangular portion $=0.6$ | L3 | 2 | 6 |
| (c) | Obtain an expression for discharge over a rectangular notch with neat sketch. | L2 | 1 | 6 |
| (OR) |  |  |  |  |
| 06 (a) | Derive on the dimensional analysis suitable parameters to present the thrust developed by a propeller. Assume that the thrust P depends upon the angular velocity $\omega$, speed of advance V , diameter D , dynamic viscosity $\mu$, mass density $\rho$, elasticity of the fluid medium which can be denoted by the speed of sound in the medium C. | L3 | 2 | 10 |
| (b) | A test was made on a pipe model 15 mm in diameter and 3 m long with water flowing through it at the corresponding speed for frictional resistance. The head loss was found by measurement to be 7 m of water. The prototype pipe is 300 mm in diameter and 240 m long through which air is flowing at $3.6 \mathrm{~m} / \mathrm{s}$. density of water and air is $1000 \mathrm{~kg} / \mathrm{m}^{3}$ and $1.22 \mathrm{~kg} / \mathrm{m}^{3}$ respectively and coefficients of viscosity of water and air are $0.01 \& 0.00018$ poise. find i) the corresponding speed of water in the model pipe for dynamic similarity. ii) pressure drop in the prototype. | L3 | 2 | 10 |
| Module 4 |  |  |  |  |
| 07 (a) | For the velocity profile for laminar boundary flow $\frac{u}{U}=\sin \left[\frac{\pi y}{2 \delta}\right]$. Obtain an expression for boundary layer thickness, shear stress, drag force on one side of the plate and coefficient of drag in terms of Reynolds number | L2 | 2 | 10 |
| (b) | For velocity profile for turbulent boundary layer $\frac{u}{U}=\left[\frac{y}{\delta}\right]^{(1 / 7)}$, obtain an expression for boundary layer thickness, shear stress, drag force on one side of the plate and coefficient of drag in terms of Reynolds number. Given $\tau_{0}=0.0225 \rho \mathrm{U}^{2}\left[\frac{\mu}{\rho \delta U}\right]{ }^{(1 / 4)}$ | L2 | 2 | 10 |
| (OR) |  |  |  |  |
| 08 (a) | Define and obtain expression for: | L2 | 1,2 | 10 |

|  | i) displacement thickness ii) momentum thickness iii) energy thickness |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| (b) | Consider two different points on the surface of the airplane wing flying at $80 \mathrm{~m} / \mathrm{s}$. the pressure coefficient and flow velocity at point 1 are -1.5 and $110 \mathrm{~m} / \mathrm{s}$, respectively. The pressure coefficient at point 2 is -0.8 . assuming incompressible flow, calculate the flow velocity at point 2 | L3 | 2 | 6 |
| (c) | With neat sketch, explain the airfoil characteristics. | L1 | 2 | 4 |
| Module 5 |  |  |  |  |
| 09 (a) | Derive an expression for the velocity of sound wave for compressible fluid when process is assumed as i) isothermal \& ii) adiabatic. | L2 | 2 | 10 |
| (b) | Calculate the stagnation pressure, temperature and density on the stagnation point on the nose of a plane, which is flying at $800 \mathrm{~km} / \mathrm{hr}$. through still air having pressure $8 \mathrm{~N} / \mathrm{cm}^{2}(\mathrm{abs})$, temperature $-10^{\circ} \mathrm{C}$. Take $\mathrm{R}=287.14 \mathrm{~J} / \mathrm{Kg} \mathrm{K}$ and $\mathrm{k}=1.4$ | L3 | 2 | 10 |
| (OR) |  |  |  |  |
| 10(a) | Derive an expression for stagnation pressure, temperature and density for compressible flow. | L2 | 2 | 15 |
| 10(b) | Find the velocity of bullet fired in standard air if the mach angle is $30^{\circ}$. Take $\mathrm{R}=287.14 \mathrm{~J} / \mathrm{kg} \mathrm{K}$ and $\mathrm{K}=1.4$ for air. Assume temperature as $15^{\circ} \mathrm{C}$. | L3 | 2 | 5 |
