

SURFACE MINING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – VI (Mining Engineering)

Sub Code	15MN61	IA Marks	20
Number of Lecture Hours/week	04(L)	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credit = 04			
Course objectives:			
This course will enable students to:			
<ol style="list-style-type: none">1. Understand the basic concept of surface mining and associated methods.2. Learn various aspects of drilling and blasting practices in open cast mines.3. Learn application of various heavy earth moving machinery and their selection criteria.			
Modules			Teaching Hours
MODULE- 1: Introduction			
General consideration for the applicability of opencast mining, limits of open cast mining and its advantages and disadvantages. Method of opening box cut, selection of site for box cut.			10 Hours
MODULE- 2: Open Pit Layout and Design			
Planning the layout and open pit mine with special reference to large mechanized mines. Optimum dimensions of open pit mines. Removal of over burden and disposal, open cast bench- number, height, width and slope angle of the bench. Factors affecting the stability of the slope. Various types of slope failures, problems on slope failures. Ground water control.			10 Hours
MODULE- 3: Drilling and Blasting			
Drillability, mechanics of drilling, major types of drilling machines, basics of mechanics of blasting, principles of fragmentation. Design of blasting: with special reference to heavy blasting, air blasting, ground vibration, fly rocks novel methods of drilling, smooth blasting and pre-splitting.			10 Hours
MODULE- 4: Surface Mining Methods			
Casting, strip, quarrying and Placer Mining. Excavation and loading: Shovels, Dragline, Front-end loader, Stackers, Graders. Non-Cyclic Surface Mining: Bucket Wheel Excavators and Continuous surface miners.			10 Hours

MODULE- 5: Transport Equipments	
Dumpers, Aerial ropeways- mono cable and bi cable types and their constructional details. Shovel – dumper combination, high angle conveyor and in-pit crusher. Selection of equipments.	10 Hours
<p>Course outcomes:</p> <ol style="list-style-type: none"> 1. An understanding of various design parameters associated with different methods of surface mining. 2. Ability to design blasting round to have desired productivity with minimum damaging effect. 3. Ability to select appropriate equipment for excavating, loading and transporting material in opencast mines. 	
<p>Question Paper Pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>TEXT BOOKS:</p> <ol style="list-style-type: none"> 1. Surface Mining Technology by S.K.Das, Lovely Prakashan, Dhanbad, 1994. 2. Surface Mining by G.B.Mishra, Dhanbad Publishers, 1978. 	
<p>REFERENCE BOOKS:</p> <ol style="list-style-type: none"> 1. Elements of Mining Technology, Vol. – I, D.J.Deshmukh, 6th Edition, Central Techno Publications, Nagpur, 1998. 2. Opencast Mining – R.T. Deshmukh, M. Publications, Nagpur, 1996. 3. Latest Development of Heavy Earth Moving Machinery Amithosh De, Annapurna Publishers, Dhanbad, 1995. 4. Rock Slope Engineering, Hock and Bray, The Institution of Mining and Metallurgy, 1981. 5. Introductory Mining Engineering, Hartman, John Wiley and Sons, 1987. 6. Surface Mining: The American Institute of Mining Metallurgical And Petroleum Engineers In. 1968. 	

MINERAL PROCESSING & FUEL TECHNOLOGY

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – VI (Mining Engineering)

Sub Code	15MN62	IA Marks	20
Number of Lecture Hours/week	04(L)	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80

Credit = 04**Course objectives:**

This course will enable students to:

1. To review all unit operations in mineral processing and fuel technology.
2. To understand the importance and principles of materials handling in the mineral processing plant. To explain the methods of analysis of comminution theory, selection criteria for crushing, grinding and screening equipment, selection principles for mineral concentration techniques, criteria for mineral concentration equipment selection.
3. To analyze mineral beneficiation flow sheets for coal, copper, lead, iron, chromite and uranium.

Modules	Teaching Hours
Module 1: Fuel Technology	
Solid fuels: Wood, peat, lignite, coal, anthracite; proximate and ultimate analyses; coal characteristics for different industrial uses; characteristics of Indian coals; caking and coking properties; Liquid fuels: Petroleum - its products and testing methods. Gaseous fuels: Natural gas, producer gas and water gas.	10 Hours
Combustion of Coal: Mechanism of coal combustion, combustion systems (Combustion stoichiometry), carbonization of coal: Low temperature carbonization, high temperature carbonization.	
Module 2: Introduction to Mineral Processing, and Comminution	
Introduction: Scope, objectives and limitations of mineral processing; Liberation and beneficiation characteristics of minerals and coal. Laboratory sampling.	10 Hours
Comminution: Definition, objectives and principles of comminution, theories of comminution, stages of comminution,	
Module 3: Crushing, Grinding and Size Separation	
Crushing & Grinding: Different types of crushing and grinding equipment - their application and limitations; numerical Problems.	10 Hours

<p>Size separation: Laboratory size analysis and interpretation; Settling of solids in fluids; Industrial screens; Mechanical classifiers and hydro-cyclones: Numerical problems.</p>	
<p>Module 4: Concentration Process</p>	
<p>Gravity concentration methods: Jigging, heavy media separation, flowing film concentrator's - theory, application and limitations.</p> <p>Froth flotation: Physico-chemical principles; Reagents; Machines; Flotation of sulphides, oxides and coal.</p> <p>Electrical and magnetic methods of concentration: Principles, fields of application and limitations.</p>	<p>10 Hours</p>
<p>Module 5: Float & Sink Test, Dewatering and Flow Sheets</p>	
<p>Float and sink test: procedure for float and sink test, construction of washability curves.</p> <p>Dewatering: Principles and techniques: thickening, filtration, and drying techniques.</p> <p>Simplified flow sheets: coal, copper, lead, zinc, gold, iron, manganese ores and lime stone.</p>	<p>10Hours</p>
<p>Course outcomes: At the end of the course students will be able to:</p> <ol style="list-style-type: none"> 1. Ability to understand the importance and principles of materials handling in the mineral processing plant. 2. Ability to explain the methods of analysis of comminution theories, selection criteria for crushing, grinding and screening equipment, selection principles for mineral concentration techniques, criteria for mineral concentration equipment selection. 3. Ability to analysis the mineral beneficiation flow sheets for coal, copper, lead, iron, chromite and uranium. 	
<p>Question Paper Pattern:</p>	
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module.

UNDERGROUND METAL MINING			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – VI (Mining Engineering)			
Sub Code	15MN63	IA Marks	20
Number of Lecture Hours/week	04(L)	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credit = 04			
Course objectives:			
This course will enable students to:			
<ol style="list-style-type: none"> 4. Understand the construction of the mine developments to the deposit. 5. Understand the different methods of extraction of ore blocks in metal mine. 6. Understand the modern methods of extraction of ore blocks in metal mine. 7. Understand the problems, method of extraction in deep mining and machineries used. 			
Modules			Teaching Hours
MODULE- 1: Introduction to Metal Mining and Mine Development			
Present status of Indian metal mining industry, scope and limitations of underground Metal mining, Methods of developments, Choice of level interval and block length-shape, size, position; excavation and equipping of shaft station, grizzly, ore/waste bin, main ore pass system, underground crushing and loading stations, arrangements for dumping into main ore pass, Cross-cuts, drifts, and declines: their shape, size and position.			10 Hours
MODULE- 2: Stope and Stoping			
Classification of stoping methods, factors affecting the choice of stoping methods like depth, dip, width, grade of ore, physio mechanical characteristics of ore and wall rock. Open stoping/Unsupported stoping – room and pillar, sublevel, large diameter blast hole/DTH, shrinkage and vertical crater retreat methods - their applicability, stope layouts, stope preparation, ground breaking, mucking, ventilation and supporting, haulage and dumping.			10 Hours
MODULE- 3: Stoping Methods			
Supported stoping – post and pillar, square set, longwall, cut and fill- their applicability, stope layouts, stope preparation, ground breaking, mucking, ventilation and supporting, haulage and dumping			10 Hours
Caving stoping – top slicing, sublevel caving, and block caving; their applicability, stope layouts, stope preparation, ground breaking, mucking, ventilation and supporting, haulage			

and dumping. Indian case studies.	
MODULE- 4: Special Methods:	
Solution mining, in-situ leaching, borehole mining, underground retorting Problems of deep mining and their remedial measures. Case studies.	10 Hours
MODULE- 5: Design of Stopes	
Mining of parallel and superimposed veins, Pillar recovery Dilution, loss and recovery in stoping. Design of stopes: Stope design and production planning, scheduling, oms.	10Hours
Course outcomes: At the end of the course students will be able to:	
<ol style="list-style-type: none"> 4. Ability to construct the mine developments to the deposit 5. Ability to extract the ore block by different methods. 6. Ability to extract the ore block by modern methods. 7. Ability to identify the machineries used, methods of extraction and to analyse the problems in deep underground mine. 	
Question Paper Pattern:	
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 	
TEXT BOOKS:	
<ol style="list-style-type: none"> 1. Elements of Mining Technology Vol. II – D.J.Deshmukh, 6th edition Central Techno Publication, Nagpur, 1998. 2. Introductory Mining Engg - by H.L.Hartman 	
REFERENCE BOOKS:	
<ol style="list-style-type: none"> 1. Underground mining methods handbook - by Hustrulid SME publication 2. Metalliferrous mining of ores - by Borosov et.al. 3. SME Mining Engineering Handbook, Edited - by H.L.Hartman SME publication 4. Techniques in Underground Mining Selection - Richard E. Gertsch et al, SME 1998 	

ROCK MECHANICS			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – VI (Mining Engineering)			
Sub Code	15MN64	IA Marks	20
Number of Lecture Hours/week	04(L)	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	80
Credit = 04			
Course objectives:			
This course will enable students to:			
<ul style="list-style-type: none"> 8. To describe the importance of Rock Mechanics in the field of mining and identify of the physical and mechanical properties of rocks. 9. To understand stress and strain in rocks and the physical and mechanical properties of rocks, and failure criteria for rock and rock mass. 10. To calculate stress and strain in rocks, determination of rock properties by lab and in-situ method. 			
Modules			Teaching Hours
MODULE- 1: Introduction to Rock Mechanics:			
Definition, Scope and importance, development and application of rock mechanics in mining. Discontinuities; Description of discontinuities, Introduction to mapping and hemispherical projection of discontinuities, Barton’s shear strength of joints.			10 Hours
MODULE- 2: Analysis of Stress and Strain			
Analysis of Stress: Introduction, Definition and basic concepts, stress in a plane, (two dimensional stress), Mohr’s Circle of stress, Secondary principal stress, equations of equilibrium, plane stress equations.			10 Hours
Analysis of Strain: Introduction, Definition and basic concepts, strain in a plane, (two dimensional stress), Mohr’s Circle of strain, equations of compatibility, stress-strain relationship, basic equations in elastic theory, plain strain equations, elasto plastic behaviour of rocks. Stress – strain curves of various rocks.			
MODULE- 3: Physico-Mechanical Properties of Rocks			
Specific gravity, hardness, porosity, moisture content, permeability, thermal conductivity. Compressive, tensile and shear strengths. Modulus of elasticity, Poisson’s ratio and triaxial strength. Swell index, slake durability, point load index, Protodyakonov index and RQD. Time dependent properties of rock: Creep			10 Hours

deformation and strength behaviour; Creep test and rheological models.	
MODULE- 4: Strength and Deformability of Rock Mass	
In-situ Strength Properties of Rocks: Necessity and requirement, methods of in-situ stress measurements - Plate load test, cable jack test, borehole test, dilatometer test, flat jack test, hydraulic fracture and velocity propagation.	10 Hours
Failure criteria for rock and rockmass: Theories of rock failure; Coulomb, Mohr and Griffith criteria; Empirical criteria.	
MODULE- 5: Static and Dynamic Elastic Constants of Rocks	
Static: Introduction, definition, instrument, measurement of deformation: mechanical, optical, electrical gauges, LVDT, calculation of elastic constants of rocks.	10Hours
Dynamic: Introduction, elastic wave, Propagation of elastic wave in rock media; Determination of dynamic strength and elastic constants of rock.	
Course outcomes: At the end of the course students will be able to:	
<ol style="list-style-type: none"> 8. Ability to describe the importance of Rock Mechanics in the field of mining and identify of the physical and mechanical properties of rocks. 9. Ability to understand stress and strain in rocks and the physical and mechanical properties of rocks and failure criteria for rock and rock mass. 10. Ability to calculate stress and strain in rocks, determination of rock properties by lab and in-situ method. 	
Question Paper Pattern:	
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 	
TEXT BOOKS:	
<ol style="list-style-type: none"> 1. Strata Mechanics in Coal Mining, Jeremic, K.L. Jeremic, Rotterdam, Balkema, 1985. 2. Fundamentals of Rock Mechanics – Jager & Cook, Methuen andco. London, 1969. 	
REFERENCE BOOKS:	
<ol style="list-style-type: none"> 1. Continuum Theory of rock Mechanics Csaba Asszonyi, Transtech Publications, 1979. 2. Hand Book on Mechanical Properties of rocks R.D. Lama, V.S.Vutukuri, Vol. I to IV, Transtech Publications, 1978. 	

3. Mechanics and Engineering, Charles Jaeger, Cambridge University Press, 1979.
4. Rock Mechanics for Underground Mining, 2nd edition, Brady and Brown, Kluwer Academic Publishers, 1993.
5. Ground Mechanics in Hard rock Mining, M.L. Jeremic, Oxford & IBH Publishing Co. Pvt. Ltd., New Delhi, 1987.

Professional Elective-II MINE DISASTERS AND RESCUE [As per Choice Based Credit System (CBCS) scheme] SEMESTER – VI (Mining Engineering)			
Sub Code	15MN651	IA Marks	20
Number of Lecture Hours/week	03(L) + 01(T)	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credit = 03			
Course objectives: This course will enable students to: <ol style="list-style-type: none"> 1. To understand the causes of mine fire and spontaneous heating. 2. To know how to tackle the mine disasters like mine fire and inundation. 3. To understand the lighting in underground and open cast mine. 4. To understand the rescue and recovery operation in a mine. 			
Modules			Teaching Hours
MODULE- 1:			
Mine Fires: Classification, surface and underground fires, prevention and control of underground fires, firefighting, study of atmosphere behind sealed off area, re-opening of sealed off area.			08 Hours
MODULE- 2:			
Spontaneous Heating: Mechanism, factors governing spontaneous heating, stages of spontaneous heating, symptoms of spontaneous heating in underground mines, detection and prevention of spontaneous heating, interpretation of mine air samples, Graham's Index, Problems.			08 Hours
MODULE- 3:			
Disasters: Types of Disasters, mechanism, ignition temperature, lag on ignition, causes and coal dust and fire damp explosions. Stone dusting, stone dust barriers and water barriers, investigation after the explosion, Explosibility Limit, Problems on Explosibility limit, Inundation: Causes, measures against inundations. Dewatering water logged workings, precautions to be taken when approaching old water logged workings, safety boring apparatus. Problems.			08 Hours

MODULE- 4:	
Mine Illumination: Technical terms in lighting and photometry, Underground lighting, electric safety lamp, different types of portable lamps, Layout of lamp room. Methods of illumination in underground mines- fixed system, mobile system. Mine Lighting in Opencast mines: Lighting in opencast mines, standards for mine lighting, Illumination survey, Luminance calculations, Problem	08 Hours
MODULE- 5:	
Mine Rescue: Mine Rescue and equipment, short distance apparatus, self-contained breathing apparatus (not specific to any equipment), Principle of operation, advantages, self-rescuers, organization of rescue. Mine Recovery: recovery work in connection with fires, explosions and inundations. Calculation on available time for recovery or rescue.	08 Hours
Course outcomes:	
At the end of the course students will be able to:	
<ol style="list-style-type: none"> 1. An ability to know the causes of mine fire and spontaneous heating. 2. An ability to tackle the mine disasters like mine fire and inundation. 3. An ability to design the lighting in underground and open cast mine. 4. An ability to carry out the rescue and recovery operation in a mine. 	
Question Paper Pattern:	
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 	
TEXT BOOKS:	
<ol style="list-style-type: none"> 1. Mine Disasters and Mine Rescue, M.A. Ramulu, Oxford & IBH Publishing Co. Ltd., 1991. 2. Elements of Mine Technology Vol. II by D.J.Deshmukh, 6 th Edition, Central Techno Publications, Nagpur. 	
REFERENCE BOOKS:	
<ol style="list-style-type: none"> 1. Fires in Coal Mines L.C. Kaku, 2 nd Edition Oriental Publishers, 1985. 2. Mine Ventilation, S. Ghatak, Vol. I, Coal Field Publishers, Asansol, 1983. 3. Underground Mine Lighting – Torter, Vol. II, Trans Tech Publication, Frg, 1982. 4. Environmental Engineering in Mines, V.S. Vutukuri & R.D. Lama, Cambridge University Press, 1992. 	

Professional Elective-II MINE SAFETY ENGINEERING [As per Choice Based Credit System (CBCS) scheme] SEMESTER – VI (Mining Engineering)			
Sub Code	15MN652	IA Marks	20
Number of Lecture Hours/week	03(L) + 01(T)	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credit = 03			
Course objectives:			
This course will enable students to:			
<ol style="list-style-type: none"> 1. Describing safety management system and risk management in Indian mining industries. 2. Formation of safety audits and control in mining industries. 3. Producing of risk analysis using statistical methods and analysis of mine accidents. 			
Modules			Teaching Hours
MODULE- 1: Introduction			
Safety management systems in Indian mining industry; Need for Mine safety; Mine safety statistics.			08 Hours
MODULE- 2: Risk Management			
Risk Management related terms and definitions; Basic concept of risk; Difference between hazards and risks; Risk components and types, Risk management objectives, Risk management process; Risk analysis objectives in hazardous system life cycle; Functions of a risk manager; Hazards Identification and Risk Assessment (HIRA).			08 Hours
MODULE- 3: Statistical methods of Risk analysis			
Appraisal of advanced techniques – fault tree analysis, Failure Mode and Effect Analysis (FMEA) ; Failure Mode Effect and Critical Analysis (FMECA) - Definitions, Descriptions, Applications, Benefits ,. Similarities and differences between FMEA & FMECA			08 Hours
MODULE- 4: Mine Accident Analysis			
In-depth study of accidents due to various causes; and Human Behavioral Approach in mine safety.			08 Hours

MODULE- 5: Safety audits and control	
Safety audit - Objectives, Frequency, and methods; Safety Audit Process Flowchart; Baseline Data for Safety Audit; Safety records management, Training of Miners, Mine Vocational Training Rule, 1966. Recent trends of development of safety engineering approaches.	08 Hours
<p>Course outcomes:</p> <p>At the end of the course students will be able to:</p> <ol style="list-style-type: none"> 5. Gain insights of safety management system and risk management in Indian mining industries. 6. Formulate safety audits and control in mining industries. 7. Produce risk analysis using statistical methods and analysis of mine accidents. 	
<p>Question Paper Pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module. 	
<p>TEXT BOOKS:</p> <ol style="list-style-type: none"> 1. Mine Safety by Prof. Kejriwal 2. Occupational Safety and Health in Industries and Mines by C.P.Singh 3. Indian Mining Legislation – A Critical Appraisal by Rakesh & Prasad. 4. Safety in Mines : A survey of accidents, their causes & prevention (1901 to 2000) 	
<p>REFERENCE BOOKS:</p> <ol style="list-style-type: none"> 1. Safety in Mines, by Prof. B. K. Khejriwal. 2. System Safety engineering and risk assessment: A practical approach, by N. J. Bahr Publisher : Taylor and Francis 3. System Safety engineering and management, by H. E. Roland and B. Moriarty Publisher : Wiley Interscience 	

Open Elective-II TUNNELING ENGINEERING [As per Choice Based Credit System (CBCS) scheme] SEMESTER – VI (Mining Engineering)			
Sub Code	15MN661	IA Marks	20
Number of Lecture Hours/week	03(T)	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credit = 03			
Course objectives: This course will enable students to: <ol style="list-style-type: none"> 1. Design tunnels, rock support and grouting and evaluate the most important issues in the procedure 2. Evaluate tunnel excavation method from technical and production aspects 3. Analyze cost and time for ordinary tunnels based on risks and construction management principles 4. Carry out a basic design of tunnel ventilation 			
Modules			Teaching Hours
MODULE- 1:			
Introduction: Scope and application, historical developments, art of tunnelling, tunnel engineering, future tunnelling considerations. Types of Underground Excavations: Tunnel, adit, decline, shaft; parameters influencing location, shape and size; geological aspects; planning and site investigations.			08 Hours
MODULE- 2:			
Tunnelling Methods: Types and purpose of tunnels; factors affecting choice of excavation technique; Methods - soft ground tunnelling, hard rock tunnelling, shallow tunnelling, deep tunnelling; Shallow tunnels – cut and cover, cover and cut, pipe jacking, jacked box excavation techniques, methods of muck disposal, supporting, problems encountered and remedial measures.			08 Hours
MODULE- 3:			
Tunnelling by Drilling and Blasting: Unit operations in conventional tunnelling; Drilling - drilling principles, drilling equipment, drilling tools, drill selection, specific drilling, rock drillability factors; Blasting -			08 Hours

explosives, initiators, blasting mechanics, blast holes nomenclature; types of cuts- fan, wedge and others; blast design, tunnel blast performance - powder factor, parameters influencing, models for prediction; mucking and transportation equipment selection.	
MODULE- 4:	
Tunnelling by Roadheaders and Impact Hammers: Cutting principles, method of excavation, selection, performance, limitations and problems. Tunnelling by Tunnel Boring Machines: Boring principles, method of excavation, selection, performance, limitations and problems; TBM applications.	08 Hours
MODULE- 5:	
Supports in Tunnels: Principal types of supports and applicability, NATM. Ground Treatment in Tunnelling: Adverse ground conditions and its effect on tunnelling; introduction to ground control. Tunnel Services: Ventilation, drainage and pumping Tunnelling Hazards: Explosion, flooding, chimney formation, squeezing ground.	08 Hours
Course outcomes: At the end of the course students will be able to: 1. Design tunnels, rock support and grouting and evaluate the most important issues in the procedure 2. Evaluate tunnel excavation method from technical and production aspects 3. Analyze cost and time for ordinary tunnels based on risks and construction management principles 4. Carry out a basic design of tunnel ventilation	
Question Paper Pattern:	
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. Each full question will have sub questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module.

Open Elective-II UNDERGROUND SPACE TECHNOLOGY [As per Choice Based Credit System (CBCS) scheme] SEMESTER – VI (Mining Engineering)			
Sub Code	15MN662	IA Marks	20
Number of Lecture Hours/week	03(T)	Exam Hours	03
Total Number of Lecture Hours	40	Exam Marks	80
Credit = 03			
Course objectives: This course will enable students to: <ol style="list-style-type: none"> 1. excavation methods for construction of underground structures 2. requirement of different machinery for excavation purposes 3. facility design in under structures 4. hazards associated with underground construction works 			
Modules			Teaching Hours
MODULE- 1:			
Historical : Natural caves, archeological caves and their construction, tunnels for road, rail and hydropower. Need for Underground Space: Congestion driven needs for development of infrastructure for transport, water, power supply, vehicle movement in cities, storage of materials.			08 Hours
MODULE- 2:			
Engineering Utilities: Hydropower tunnels and caverns, underground storage for LPG, LNG, Crude and its products – basic principles. Nuclear Waste Disposal: Conditions for waste disposal, effect of radioactivity and heat on surrounding rock, conceptual design of a nuclear waste disposal facility.			08 Hours
MODULE- 3:			
Strategic Utilities: Defense facilities, civil shelters, navy bases, air force hangars, safety and risk assessment systems. Other Storage: Grain storage, their advantages, disadvantages, underground			08 Hours

cold storage and cellar for foods and beverages	
MODULE- 4:	
Modern Developments: Underground ring roads in mega cities, submerged and floating tunnels, underground libraries, museums, dwelling units, resorts.	08 Hours
MODULE- 5:	
Traffic surveillance and control system (TSCS) in tunnels: Traffic control signs, signals, lights, cameras. Tutorials: Preparation of different underground space application plans.	08 Hours
Course outcomes: At the end of the course students will be able to:	
<ol style="list-style-type: none"> 1. excavation methods for construction of underground structures 2. requirement of different machinery for excavation purposes 3. facility design in under structures 4. hazards associated with underground construction works 	
Question Paper Pattern:	
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full Question consisting of 16 marks • There will be 2 full questions (with a maximum of four sub questions) from each module. ROCK MECHANICS LAB			
[As per Choice Based Credit System (CBCS) scheme]			
SEMESTER – VI (Mining Engineering)			
Laboratory Code	15MNL67	IA Marks	20
Number of Lecture Hours/week	01 Hour Tutorial(Instructions)+02 Laboratory	Exam Hours	03
Total Hours	42	Exam Marks	80
Credit = 02			
Course objectives:			
This course will enable students to:			
<ol style="list-style-type: none"> 1. Prepare rock specimen for lab tests. 2. Select suitable lab testing method to determine strength of rock specimen. 3. Analyze discontinuities using hemispherical projection. 			
Part-A (Any one question 35 marks)			
Plotting of Stereographic Hemispherical projections of Discontinuities			
Determination of Rock Quality Designation of rock.			
Preparation of rock specimens for laboratory tests.			
Determination of uniaxial compressive strength of rocks.			
Determination of tensile strength of rock by Brazilian test.			
Part-B (Any one question 35 marks)			
Determination of compressive strength index of rocks by using point load tester.			
Determination of slake durability index of rocks.			
Determination of Protodykanov index of the given rock specimen.			
Schmidt hammer test.			
Determination of shear strength by direct and indirect test			
Part-C (Viva Voce 10 marks)			
Courseoutcomes:			

On the completion of this laboratory course, the students will be:

1. Ability to prepare suitable rock specimen for lab tests.
2. Ability to select suitable testing methods to determine strength.
3. Ability to plot Stereographic Hemispherical projections of Discontinuities.

Conduction of Practical Examination:

- All laboratory experiments (Part - A & Part - B) are to be included for practical examination.
- Students are allowed to pick one experiment from each of the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
- PART –A: Procedure + Conduction + Viva: 10 + 25 +05 (40)
- PART –B: Procedure + Conduction + Viva: 10 + 25 +05 (40)
- Change of experiment is allowed only once and marks allotted to the procedure part to be made zero

MINE ENVIRONMENT AND VENTILATION LAB

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – VI (Mining Engineering)

Laboratory Code	15MNL68	IA Marks	20
Number of Lecture Hours/week	01 Hour Tutorial(Instructions)+02 Laboratory	Exam Hours	03
Total Hours	42	Exam Marks	80

Credit = 02**Course objectives:**

This course will enable students to:

1. To study the measure and monitor different types of gases in mines
2. To study ventilation survey
3. To study the handling of rescue apparatus
4. To study the dust sampling in mines

Part-A (Any one question 35 marks)

1. Assembling and dismantling of flame safety lamp
2. Assess the percentage of methane and oxygen using flame safety lamp
3. Determine the relative humidity of the atmosphere
4. Determine the quantity of air flow in a mine
5. Determine the cooling efficiency of the atmosphere

Part-B (Any one question 35 marks)

- Determination of characteristic curves of a fan with respect mine characteristics
7. Demonstration of fire extinguishers to quench the fire
8. To determine the quantity of particulate matter using dust samplers
9. Study of gas sampling equipment and determination of CO (MSA CO detector and other equipment).
10. Demonstration of self-contained breathing apparatus, self-rescuers, and short distance apparatus.

Part-C (Viva Voce 10 marks)

Course outcomes:

On the completion of this laboratory course, the students will be:

1. An ability to measure and monitor different types of gases in mines.
2. An ability to do ventilation survey.
3. An ability to handling of rescue apparatus.
4. An ability to dust sampling in mines.

Conduction of Practical Examination:

- All laboratory experiments (Part - A & Part - B) are to be included for practical examination.
- Students are allowed to pick one experiment from each of the lot.
- Strictly follow the instructions as printed on the cover page of answer script for breakup of marks
- PART –A: Procedure + Conduction + Viva: 10 + 25 +05 (40)
- PART –B: Procedure + Conduction + Viva: 10 + 25 +05 (40)
- Change of experiment is allowed only once and marks allotted to the procedure part to be made zero
