M.Tech. Aeronautical Engineering

<b>M.Tech Aeronautical Engineering</b> <b>Outcome Based Education(OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER -I</b>			
<b>APPLIED MATHEMATICS</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAE11</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand principles of vector operations</li> <li>2. Analyze integrals</li> <li>3. Find numerical solutions to equations</li> <li>4. Determine finite difference approximate in various forms</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  Review of Fourier series and Applications, Review of Laplace Transforms and Applications. Classification of second order linear partial differential equations, Canonical forms for hyperbolic, parabolic and elliptic equations, Homogeneous and Non Homogeneous equations with constant coefficients. Applications		<b>10 Hours</b>	<b>L1, L2</b>
<b>Module -2</b>  Vector Functions, General rules for differentiation, Velocity and Acceleration, Gradient of a scalar field, Directional Derivative, Properties of Gradient, Divergence of vector point function, Curl of a vector point function, Properties of Divergence and Curl. Applications Integration of vector functions, Line integral, Circulation, Work done by a force, Surface integrals, Volume integrals, Divergence Theorem of Gauss, Green's Theorem in the plane, Stoke's Theorem, problems on all the three theorems and Applications.		<b>10 Hours</b>	<b>L1, L2</b>
<b>Module -3</b>  Review of Complex analysis, Complex analysis applied to potential theory, Electrostatic fields, conformal mapping, Heat problems, Fluid flow, General properties of Harmonic functions, Complex Integration, Cauchy's Theorem, Cauchy's Integral Formula, Cauchy's Integral Formula for Derivatives, Taylor's and Laurent's series. Applications. Singular point, Residue, Method of finding Residues, Residue Theorem,		<b>10 Hours</b>	<b>L1, L2, L3</b>

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

Contour Integration, Integration round the unit circle, Rectangular contour. Applications.		
<b>Module -4</b> Numerical Solutions algebraic and transcendental equations: False position method, Newton – Raphson method, Iteration method, Aitken’s method, Solution of linear simultaneous equations. Gauss elimination method, Inverse of a matrix , Gauss-Seidal method, Crout’s method. Solution of Ordinary Differential Equations: Taylor’s Series method, Picard’s method, Euler’s method, Euler’s Modified method, Runge-Kutta 4th order method. Predictor and corrector method (Milen’s and Adams-Bashfourth) Applications.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -5</b> Finite differences, Interpolation, Newton’s Forward & Backward Interpolation formulae, Lagrange’s formula, Newton’s Divided difference, Central difference formulae (all formulae with proof). Numerical Differentiation, Numerical Integration (all rules with proof). Applications.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply principles of vector operations to engineering problems</li> <li>2. Solve close form solutions</li> <li>3. Apply finite difference approximate to solve elliptic, hyperbolic and parabolic form of equations</li> </ol>		
<b>Graduate Attributes (as per NBA):</b> <ul style="list-style-type: none"> <li>o Engineering Knowledge.</li> <li>o Problem Analysis.</li> <li>o Design / development of solutions</li> <li>o Interpretation of data</li> </ul>

<b>AERODYNAMICS</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAE12</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Analyze incompressible flows over aerofoils</li> <li>2. Understand aerofoil and wing aerodynamic characteristics and theory of lift generation</li> <li>3. Analyze airfoils at subsonic, transonic and supersonic flight conditions.</li> <li>4. Acquire knowledge of basic compressible gas dynamics</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>Basics of Aerodynamics:</b> Properties of fluids, Characteristics of Atmosphere, Type of fluid flows, Generation of Lift, Drag and Moment, Incompressible flows over airfoils, calculation of lift and drag from measured pressure distribution, Streamlined and bluff-body, Reynolds number and Mach number, Conservation law of mass and momentum, Euler and Bernoulli's equations, pitot-tube measurement of airspeed .Pressure coefficient. Streamlines, path lines and streak lines. Angular velocity, vorticity, circulation Stream function, velocity potential and their relationship. Governing equation for irrotational and incompressible fluid flow.		10 Hours	L1, L2
<b>Module -2</b>  <b>Aerodynamics of airfoils and wings:</b> Airfoil nomenclature and classification, Low speed aerodynamic characteristics of symmetric and cambered airfoils, Centre of pressure, aerodynamic centre and aerodynamic moment, Concept of point vortex, line vortex and vortex sheet, Kutta condition, Kelvins circulation theorem and starting vortex, Classical thin airfoil theory and symmetric airfoil. Finite wing nomenclature. Incompressible flow over wing, vortex filament, bound vortex, horse shoe vortex, downwash, induce angle of attack and drag. Type of drag. Biot-Savart law and Helmholtzs vortex theorem. Prandtls lifting line theory and limitations. Elliptic lift distributions, expression for induced angle of attack and induce drag. Two dimensional and three dimensional wings lift curve slope and effect of aspect ratio. High lift devices.		10 Hours	L1, L2

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Module -3</b> <b>High speed Aerodynamics:</b> Fundamentals of thermodynamic concepts, conservation of energy. Speed of sound, Mach wave and Mach angle. Normal shock wave, Oblique shock wave, Expansion fan, Prandtl-Meyer expansion. Family of shocks. Flow through convergent divergent nozzle. Hodograph and pressure turning angle. Rankine-Hugoniot relation.	10 Hours	L1, L2, L3
<b>Module -4</b> <b>Compressible flow over airfoil:</b> Full velocity potential equation. Small perturbation theory. Linearized velocity potential equation and boundary conditions. Pressure coefficient for small perturbation. Prandtl- Glauert compressibility correction. Critical Mach number, Drag Divergence Mach Number, Sound barrier. Transonic area rule, supercritical airfoil, swept wing and delta wing.	10 Hours	L1, L2, L3
<b>Module -5</b> <b>One dimensional flow through constant area duct:</b> Fanno flow and fanno line, Rayleigh flow and Rayleigh line. Method of characteristics and its application. Flow past Wedge and cone.	10 Hours	L1, L2, L3
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Solve aerodynamic problems related to pressure distribution and pressure coefficients</li> <li>2. Demonstrate knowledge of compressible flows to solve one dimensional flows through constant area ducts</li> <li>3. Solve problems related to normal and oblique shock waves</li> </ol>		
<b>Graduate Attributes (as per NBA):</b> <ul style="list-style-type: none"> <li>o Engineering Knowledge.</li> <li>o Problem Analysis.</li> <li>o Design / development of solutions</li> <li>o Interpretation of data</li> </ul>		
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>

Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. To understand the configuration features of fixed wing and rotary wing aircraft</li> <li>2. Acquire the knowledge of various aircraft systems and flight testing</li> <li>3. Gain knowledge of standards and specifications used in aircraft and system designs</li> <li>4. Understand spacecraft launch vehicles</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>General introduction to aeronautics:</b> Fixed wing & Rotary wing aircraft: Light aircraft, Fighter aircraft, Passenger aircraft, and Cargo aircraft; Light helicopter, Large passenger and cargo helicopters Exploded views of various types of aircraft, identification of various structural parts and their functions and materials used.  <b>Aircraft Systems:</b> System design and development processes; <b>Mechanical systems:</b> Components and functions of Hydraulics & Landing Gear systems.		10 Hours	L1, L2
<b>Module -2</b>  <b>Aircraft Electrical Systems:</b> Generation, distribution and typical aircraft electrical systems and recent trends; <b>Avionic systems:</b> Flight control systems; Navigation system, Communication and radar systems their components and functions; Emergency systems and advanced systems.  <b>Satellites &amp; orbital dynamics:</b> Satellite missions, Different types of satellites and their applications, Spacecraft configurations.		10 Hours	L1, L2
<b>Module -3</b> <b>Spacecraft Launch Vehicles:</b> Rocket propulsion principles and types and propellants; Sounding Rockets, Staging of rockets; major subsystems of launch vehicles and their functions; Different types of satellite launch vehicles, General description about Launch Vehicles of Indian origin.		10 Hours	L1, L2, L3

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Module -4</b> <b>Standards &amp; Specifications and Testing &amp; Certification Aspects:</b> Introduction to aircraft international and standards specifications for Military and Civil aircraft, Company standards; Airworthiness certification aspects aircraft; Ground testing and qualification testing.  <b>Flight testing:</b> Purpose and scope, Test plans and procedures; flight test instrumentation; general flying and handling characteristics of aircraft; Preparation, and conduct of tests, fault reporting.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -5</b> <b>Introduction to aerospace industries and institutions and their roles:</b> Aircraft design and production industries; Components and systems manufactures, Service industries, Research and Development organizations and Academic institutions.  <b>Introduction to Airport Engineering:</b> Development of air transportation, ICAO, IAAI,AAI, Aircraft characteristics which affect airport planning; Airport planning: Airport Master Plan, Regional Plan, Site selection; Terminal area and airport layout, Visual aids and ATC.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply the knowledge to aircraft system layouts</li> <li>2. Demonstrate knowledge of standards and specifications for design of aircraft</li> <li>3. Draw test plan and specify flight test instrumentation for flight test programs</li> </ol>

<b>COMPUTATIONAL FLUID DYNAMICS</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAE14</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand CFD ideas and Mathematical behavior of PDEs</li> <li>2. Acquire the knowledge to solve CFD problems through finite difference discretisation</li> <li>3. Gain knowledge for grid generation and optimize grids</li> <li>4. Transform the grids to computational domain</li> <li>5. Acquire the knowledge to solve CFD problems through finite volume technique</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>Introduction:</b> CFD ideas to understand, CFD Application, Governing Equations (no derivation) of flow; continuity, momentum, energy. Conservative & Non-conservative forms of equations, Integral vrs Differential Forms of Equations. Form of Equations particularly suitable for CFD work. Shock capturing, Shock fitting, Physical Boundary conditions. <b>Mathematical Behavior of Partial Differential Equations and Discretization:</b> Classification of partial differential equations and its Impact on computational fluid dynamics; case studies. Essence of discretization, order of accuracy and consistency of numerical schemes, Lax's Theorem, convergence, Reflection Boundary condition.		10 Hours	L1, L2
<b>Module -2</b>  <b>Mathematical Behavior of Partial Differential Equations and Discretization:</b> Higher order Difference quotients. Explicit & Implicit Schemes. Error and analysis of stability, Error Propagation. Stability properties of Explicit & Implicit schemes. <b>Solution Methods of Finite Difference Equations:</b> Time & Space Marching. Alternating Direction Implicit (ADI) Schemes. Relaxation scheme, Jacobi and Gauss-Seidel techniques, SLOR technique. Lax-Wendroff first order scheme, Lax-Wendroff with artificial viscosity, upwind scheme, midpoint leap frog method.		10 Hours	L1, L2

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Module -3</b>  <b>Grid Generation:</b> Structured Grid Generation: Algebraic Methods, PDE mapping methods, use of grid control functions, Surface grid generation, Multi Block Structured grid generation, overlapping and Chimera grids. Unstructured Grid Generation: Delaunay-Voronoi Method, advancing front methods (AFM Modified for Quadrilaterals, iterative paving method, Quadtree & Octree method).	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -4</b>  <b>Adaptive Grid Methods:</b> Multi Block Adaptive Structured Grid Generation, Unstructured adaptive Methods. Mesh refinement methods, and Mesh enrichment method. Unstructured Finite Difference mesh refinement. <b>Approximate Transformation &amp; Computing Techniques:</b> Matrices & Jacobian. Generic form of governing Flow Equations with strong conservative form in transformed space. Transformation of Equation from physical plane into computational Plane -examples. Control function methods. Variation Methods. Domain decomposition. Parallel Processing.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -5</b>  <b>Finite Volume Techniques:</b> Finite volume Discretisation-Cell Centered Formulation. High resolution finite volume upwind scheme Runge-Kutta stepping, Multi-Step Integration scheme. Cell vertex Formulation. Numerical Dispersion. <b>CFD Application to Some Problems:</b> Aspects of numerical dissipation & dispersion. Approximate factorization, Flux Vector splitting. Application to Turbulence-Models. Large eddy simulation, Direct Numerical Solution. Post-processing and visualization, contour plots, vector plots etc.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Develop grids around given shapes and transform the physical domain in to computational domain</li> <li>2. Develop adaptive structured and unstructured grids</li> <li>3. Apply knowledge to solve CFD problems through finite difference and finite volume techniques</li> </ol>		
<b>Graduate Attributes (as per NBA):</b> <ul style="list-style-type: none"> <li>○ Engineering Knowledge.</li> <li>○ Problem Analysis.</li> <li>○ Design / development of solutions</li> <li>○ Interpretation of data</li> </ul>

<b>AERODYNAMICS LAB</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAEL16</b>	CIE Marks	40
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	56	SEE Marks	60
CREDITS – 02			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Familiarization with various wind tunnel experimental facilities</li> <li>2. Familiarize with different sensors and measurement techniques and model set up system</li> <li>3. Conduct the test, acquire the data and analyse and document</li> </ol>			
Modules			Revised Bloom's Taxonomy (RBT) Level
1. Calibration of test section of a subsonic wind tunnel.			L1, L2, L3, L4
2. Smoke flow visualization on a wing model at different angles of incidence at low speeds.			L1, L2, L3, L4
3. Tuft flow visualisation on a wing model at different angles of incidences at low speeds: Identify zones of attached and separated flows			L1, L2, L3, L4
4. Surface pressure distribution around building models in multiple model arrangement			L1, L2, L3, L4
5. Surface pressure distribution on a cambered wing at different angles of incidence and calculation of lift and pressure drag.			L1, L2, L3, L4, L5
6. Calculation of total drag of a cambered airfoil at a low incidence using pitot-static probe wake survey.			L1, L2, L3, L4
7. Measurement of typical boundary layer velocity profile on the wind tunnel wall (at low speeds) using a pitot probe and calculation of boundary layer displacement and momentum thickness in the presence of a circular cylinder model.			L1, L2, L3, L4
8. Study the effect of Blockage ratio on drag & pressure distribution of a circular cylinder.			L1, L2, L3
9. Determination of turbulence level in a low speed wind tunnel.			L1, L2, L3

Total Number of Lecture Hours	25	SEE Marks	60
CREDITS – 02			
<b>Course objectives:</b> <ul style="list-style-type: none"> <li>To give an overview of the research methodology and explain the technique of defining a research problem</li> <li>To explain the functions of the literature review in research.</li> <li>To explain carrying out a literature search, its review, developing theoretical and conceptual frameworks and writing a review.</li> <li>To explain various research designs and their characteristics.</li> <li>To explain the details of sampling designs, measurement and scaling techniques and also different methods of data collections.</li> <li>To explain several parametric tests of hypotheses and Chi-square test.</li> <li>To explain the art of interpretation and the art of writing research reports.</li> <li>To explain various forms of the intellectual property, its relevance and business impact in the changing global business environment.</li> <li>To discuss leading International Instruments concerning Intellectual Property Rights.</li> </ul>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b> <b>Research Methodology:</b> Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India. <b>Defining the Research Problem:</b> Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration		5 Hours	L1, L2
<b>Module -2</b> <b>Reviewing the literature:</b> Place of the literature review in research, Bringing clarity and focus to your research problem, Improving research methodology, Broadening knowledge base in research area, Enabling contextual findings, How to review the literature, searching the existing literature, reviewing the selected literature, Developing a theoretical framework, Developing a conceptual framework, Writing about the literature reviewed. <b>Research Design:</b> Meaning of Research Design, Need for Research		5 Hours	L1, L2

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

Design, Features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic Principles of Experimental Designs, Important Experimental Designs.		
<b>Module -3</b> <b>Design of Sampling:</b> Introduction, Sample Design, Sampling and Non-sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs. <b>Measurement and Scaling:</b> Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Techniques, Multidimensional Scaling, Deciding the Scale. <b>Data Collection:</b> Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data, Selection of Appropriate Method for Data Collection, Case Study Method	<b>5 Hours</b>	<b>L1, L2</b>
<b>Module -4</b> Testing of Hypotheses: Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis. Chi-square Test: Test of Difference of more than Two Proportions, Test of Independence of Attributes, Test of Goodness of Fit, Cautions in Using Chi Square Tests. .	<b>5 Hours</b>	<b>L1,L2, L3,L4</b>
<b>Module -5</b> <b>Interpretation and Report Writing:</b> Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports. <b>Intellectual Property:</b> The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999, The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act 1999, Copyright Act, 1957, The Protection of Plant Varieties and Farmers' Rights Act, 2001, The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO), WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights (TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred,	<b>5 Hours</b>	<b>L1,L2, L3,L4</b>

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout-Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property			
<b>Revised Bloom's Taxonomy Level</b>	L1 – Remembering, L2 – Understanding ,L3 – Applying , L4 – Analysing.		
<b>Course outcomes:</b> At the end of the course the student will be able to:			
<ul style="list-style-type: none"><li>• Discuss research methodology and the technique of defining a research problem</li><li>• Explain the functions of the literature review in research, carrying out a literature search, developing theoretical and conceptual frameworks and writing a review.</li><li>• Explain various research designs and their characteristics.</li><li>• Explain the details of sampling designs, measurement and scaling techniques and also different methods of data collections</li><li>• Explain several parametric tests of hypotheses and Chi-square test.</li><li>• Explain the art of interpretation and the art of writing research reports</li><li>• Discuss various forms of the intellectual property, its relevance and business impact in the changing global business environment and leading International Instruments concerning IPR</li></ul>			
<b>Graduate Attributes (As per NBA):</b> Problem analysis, Investigation, Design, Individual and teamwork, Communication skills, Professionalism.			
<b>Question paper pattern:</b> <ul style="list-style-type: none"><li>• The question paper will have ten questions.</li><li>• Each full question consists of 16 marks.</li><li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li><li>• Each full question will have sub questions covering all the topics under a module.</li><li>• The students will have to answer 5 full questions, selecting one full question from each module.</li></ul>			
<b>Text Books:</b> <ul style="list-style-type: none"><li>1. Research methodology: Methods and Techniques, C.R. Kothari, Gaurav Garg, New Age International,4th Edition, 2018.</li><li>2. ResearchMethodologyastep-by-stepguideforbeginners. (For the topic Reviewing the literature under module 2) , Ranjit Kumar, SAGE Publications Ltd.,3rd Edition, 2011</li><li>3. Study Material (For the topic Intellectual Property under module 5), Professional Programme Intellectual Property Rights, Law and Practice, The Institute of Company Secretaries of India, Statutory Body Under an Act of Parliament, September 2013.</li></ul>

**Semester – II**

<b>M.Tech Aeronautical Engineering</b> <b>Outcome Based Education(OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER -II</b>			
<b>AIRCRAFT PERFORMANCE AND FLIGHT MECHANICS</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAE21</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand the steady and accelerated performance of airplanes</li> <li>2. Acquire knowledge of static longitudinal, directional, and lateral stability of airplanes</li> <li>3. Analyses dynamic longitudinal stability of airplanes</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>Aircraft Performance:</b> Aviation history. Principles of Flight. Aircraft aerodynamics; Drag and Thrust. Steady and level Flight. Variation of Thrust, Drag, Power available, and Power required with speed and altitude. Minimum drag, minimum power, Maximum and minimum level flight speeds. Simple problems		<b>10 Hours</b>	<b>L1, L2</b>
<b>Module -2</b>  <b>Steady Performance:</b> Airplane Steady Performance: General equation of motion, Steady level flight performance, Steady Climbing, Gliding Flights; Minimum rate of sink and range in a glide. Range and Endurance of jet and piston prop airplanes.  <b>Accelerated Performance:</b> Estimation of take-off and landing distances. Ground effect, Balanced Field Length. Turn performance; Bank angle, load factor, pull-up & pull-down maneuver; accelerated climbing, V-n diagram.		<b>10 Hours</b>	<b>L1, L2</b>
<b>Module -3</b>  <b>Static Longitudinal Stability and Control:</b> Equilibrium conditions, Definition of static stability, Definition of longitudinal static stability, stability criteria, Contribution of airframe components: Wing contribution, Tail contribution, Fuselage contribution, Power effects-		<b>10 Hours</b>	<b>L1, L2, L3</b>

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

Propeller airplane and Jet airplane. Trim condition. Static margin. stick fixed neutral points. Longitudinal control, Elevator power, Elevator angle versus equilibrium lift coefficient, Elevator required for landing, Restriction on forward C.G. range, Hinge moment parameters, Stick-free Neutral point, Stick force gradient in unaccelerated flight, Restriction on aft C.G.		
<b>Module -4</b> <b>Static Directional Stability and Control:</b> Introduction, Definition of directional stability, Static directional stability rudder fixed, Contribution of airframe components, Directional control. Rudder power, Stick-free directional stability, Requirements for directional control, Rudder lock, Dorsal fin. One engine inoperative condition, Weather cocking effect.  <b>Static Lateral Stability and Control:</b> Introduction, definition of Roll stability. Estimation of dihedral effect., Effect of wing sweep, flaps, and power, Lateral control, Estimation of lateral control power, Aileron control forces, Balancing the aileron.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -5</b> <b>Dynamic Longitudinal Stability:</b> Definition of Dynamic longitudinal stability: types of modes of motion: long or phugoid motion, short period motion. Airplane Equations of longitudinal motion, Derivation of rigid body equations of motion, Orientation and position of the airplane, gravitational and thrust forces, Small disturbance theory.  <b>Dynamic Lateral and Directional Stability:</b> Routh's criteria. Factors affecting period and damping of oscillations. Effect of wind shear.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply knowledge to calculate steady and accelerated performance of airplanes</li> <li>2. Solve problems of static stability for stick fix and stick free conditions</li> <li>3. Model dynamic stability for rigid airframes</li> </ol>		
<b>Graduate Attributes (as per NBA):</b> <ul style="list-style-type: none"> <li>o Engineering Knowledge.</li> <li>o Problem Analysis.</li> <li>o Design / development of solutions</li> <li>o Interpretation of data</li> </ul>		
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>

<b>M.Tech Aeronautical Engineering</b> <b>Outcome Based Education(OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER -II</b>			
<b>AEROSPACE PROPULSION</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAE22</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand the construction and operation of turbojet, turboprop and reciprocating engines</li> <li>2. Acquire knowledge of chemical rocket propulsion</li> <li>3. Acquire knowledge on space mission propulsion requirement</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>		<b>10 Hours</b>	<b>L1, L2</b>
<b>Introduction to propulsive devices:</b> Air breathing and non-air breathing systems. Atmospheric Properties. Reciprocating Engine Construction & Nomenclature; Engine Performance theory & Performance. Propeller theory. Aircraft engine health monitoring techniques.			
<b>Module -2</b>		<b>10 Hours</b>	<b>L1, L2</b>
<b>Gas turbine engines:</b> turbojet, Turbofan, Turboprop, Turbo-shaft engine Construction and Nomenclature, theory and performance, dump diffusers for modern aircraft engines. Gas turbine engine fuel and fuel systems: Nomenclature, Operation and Control system. Description & Analysis of rotating components, Compressors, Turbines & matching.			
<b>Module -3</b>		<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Elements of Chemical Rocket Propulsion:</b> Classification & fundamentals. Fuels and propellants. Fuel cells for space mission. Rocket combustion processes.			
<b>Module -4</b>		<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Solid propellant rocket description:</b> performance & estimation, Flame spread and Ignition transient. Mechanical characterization of propellants. Grain design. Burn rate estimation.			
<b>Module -5</b>		<b>10 Hours</b>	<b>L1, L2, L3</b>

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<p><b>Liquid propellant rocket description:</b> performance &amp; estimation. Injectors. Cooling. Systems. Combustion instabilities.</p> <p><b>Hybrid propellant rocket description:</b> performance &amp; estimation, Mission requirements &amp; Power plant selection. Ramjet and Scramjet engines. Introduction to Space mission.</p>		
<p><b>Course outcomes:</b>  After studying this course, students will be able to:</p> <ol style="list-style-type: none"> <li>1. Explain construction and operation of various propulsion devices</li> <li>2. Solve problems related to combustion</li> <li>3. Specify space mission propulsion requirements</li> </ol>		
<p><b>Graduate Attributes (as per NBA):</b></p> <ul style="list-style-type: none"> <li>○ Engineering Knowledge.</li> <li>○ Problem Analysis.</li> <li>○ Design / development of solutions</li> <li>○ Interpretation of data</li> </ul>

<b>M.Tech Aeronautical Engineering</b> <b>Outcome Based Education(OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER -II</b>			
<b>AIRFRAME STRUCTURES AND STRUCTURAL DESIGN</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAE23</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand the fundamentals of structural analysis of airframe parts</li> <li>2. Acquire knowledge of structural design process, and various failure theories</li> <li>3. Know the airframe life assessment and design against fatigue</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>Fundamentals of structural analysis and structural components of aircraft:</b> Basic elasticity, Two dimensional problems in elasticity, Loads on structural components, function of structural components, fabrication of structural components, connections, numerical. <b>Statically determinate and indeterminate structures as applied to aircraft structures:</b> Statically determinate: Equilibrium of force systems, truss structures, externally braced wings, landing gear, beams – shear and moments, torsion-stresses and deflection. Statically indeterminate structures: Bending moment in frames and rings by elastic centre method, Continuous structure – moment distribution method. Numerical problems		10 Hours	L1, L2
<b>Module -2</b>  <b>Introduction to practical aircraft stress analysis:</b> Introduction to wing stress analysis by modified beam theory, Introduction to fuselage stress analysis by modified beam theory, Loads and stresses on ribs and frames. numerical problems		10 Hours	L1, L2
<b>Module -3</b>  <b>Buckling and stability as applied to aircraft structures:</b> Introduction, columns and beam columns, crippling stress, buckling of thin sheets, Thin skin-stringer panels, skin-stringer panels, Integrally stiffened panels, numerical problems, <b>Overview of structural design process:</b> Structural integrity, Material and mechanical properties, failure theories, Design criteria- safe life and fail safe, Designing		10 Hours	L1, L2, L3

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

against fatigue, prediction of aircraft fatigue life.		
<b>Module -4</b>  <b>Wing box structure and Fuselage:</b> Introduction, wing box design, wing covers, spars, Ribs and bulkheads, wing root joints, variable swept wings, wing fuel tank design. Fuselage: Introduction, fuselage configuration, fuselage detail design, forward fuselage, wing and fuselage intersection, stabilizer and aft fuselage intersection, fuselage opening.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -5</b>  <b>Empennage structure, Landing gear and engine mounts: Landing gear:</b> Empennage structure: introduction, Horizontal stabilizer, vertical stabilizer, elevator and rudder. Introduction, developments and arrangements, stowage and retraction, detail design. Engine mounts: Introduction, propeller driven engine mounts, inlet of jet engines, wing-pod (pylon) mounts, rear fuselage mounts and tail mounts, fuselage mounts (fighters)	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply fundamentals of structural analysis of airframe parts</li> <li>2. Demonstrate knowledge of structural design process, and various failure theories</li> <li>3. Model airframe life assessment and design against fatigue</li> </ol>		
<b>Graduate Attributes (as per NBA):</b> <ul style="list-style-type: none"> <li>○ Engineering Knowledge.</li> <li>○ Problem Analysis.</li> <li>○ Design / development of solutions</li> <li>○ Interpretation of data</li> </ul>		
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>

<b>AVIONICS</b> (Professional Elective Course)			
Subject Code	<b>18MAE241</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course Objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>Understand the man-machine interface.</li> <li>Acquire the knowledge of aircraft sensors and avionics instruments.</li> <li>Gain the knowledge of onboard communication systems and know the integration of avionics systems.</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b> <b>Introduction:</b> Importance and role of avionics, avionic environment, Regulatory and advisory agencies. <b>Displays and man-machine interaction:</b> Head up displays, helmet mount displays, discussion of HUDs vs. HMDs, Head down displays, data fusion, intelligent displays management, Displays technology, control and data entry, instrument placement.		10 Hours	L1, L2
<b>Module -2</b> <b>Navigation and Air data Systems:</b> Types of Navigation systems, Inertial navigation principals, platform axis, gyro compassing, position determining using GPS, differential GPS. <b>Inertial reference systems:</b> Gyros and accelerometers, attitude derivation. RMI, HIS, ADI. <b>Air data and Air data systems:</b> Air data measurements-density altitude, pressure-altitude, pressure-speed, calibrated air speed, air data sensors.		10 Hours	L1, L2

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Module -3</b>  <b>Surveillance systems:</b> Air traffic control, Primary radar, Secondary radar, Replies, Various system modes, error checking, Transponders of ATCCRB & Mode S, Collision avoidance, Lightning detection, Weather radar. <b>Airborne communications systems:</b> VHF AM Communications, VHF Communications hardware, High frequency communications, ACARS, SELCAL, Digital Communications and Networking, VHF Digital communications, Data link Modes.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -4</b>  <b>Auto Pilots and Flight Management Systems:</b> Autopilots, Height control, heading control, ILS coupled autopilot, ILS localizer coupling loop, satellite landing guidance system. Flight management system-Accurate Navigation sources, flight planning, navigation and guidance, Flight –path optimization and prediction.	<b>10 Hours</b>	<b>L1, L2</b>
<b>Module -5</b>  <b>Avionic Systems Integration:</b> Avionics equipment fit. Data Bus Systems-Electrical data bus MIL-STD-1553 and optical data bus system. Integrated modular avionics architectures. Commercially off-the shelf (COTS) hardware. UAV avionics.	<b>10 Hours</b>	<b>L1, L2</b>
<b>Course Outcomes:</b>  After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply knowledge of man-machine interface in newer designs.</li> <li>2. Demonstrate application of avionics instruments &amp; Communication equipments.</li> <li>3. Model System integration.</li> </ol>		
<b>Graduate Attributes:</b> <ul style="list-style-type: none"> <li>• Engineering Knowledge.</li> <li>• Problem Analysis.</li> <li>• Design / development of solutions</li> <li>• Interpretation of data</li> </ul>		
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> </ul>

<b>M.Tech Aeronautical Engineering</b> <b>Outcome Based Education(OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER -II</b>			
<b>HELICOPTER DYNAMICS</b> (Professional Elective Course)			
Subject Code	<b>18MAE242</b>	CIE Marks	40
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course Objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Comprehend the basic concepts of helicopter dynamics.</li> <li>2. Acquire the knowledge of critical speed and rotor bearing system.</li> <li>3. Understand the turborotor system and blade vibration.</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b> <b>Introduction:</b> History of helicopter flight. Fundamentals of Rotor Aerodynamics; Momentum theory analysis in hovering flight. Disk loading, power loading, thrust and power coefficients. Figure of merit, rotor solidity and blade loading coefficient. Power required in flight. Axial climb, descent, and autorotation. <b>Blade Element Analysis:</b> Blade element analysis in hovering and forward flight. Rotating blade motion. Types of rotors. Concept of blade flapping, lagging and coning angle. Equilibrium about the flapping hinge, lead/lag hinge, and drag hinge.		<b>8 Hours</b>	<b>L1, L2</b>
<b>Module -2</b> <b>Basic Helicopter Performance:</b> Forces acting on helicopters in forward flight. Methods of achieving translatory flight. Controlling cyclic pitch: Swash-plate system. Lateral tilt with and without coning. Lateral and longitudinal asymmetry of lift in forward flight. Forward flight performance- total power required, effects of gross weight, effect of density altitude. Speed for minimum power, and speed for maximum range. Factors affecting forward speed, and ground effects.		<b>8 Hours</b>	<b>L1, L2</b>
<b>Module -3</b> <b>Rotor Airfoil Aerodynamics:</b> Rotor airfoil requirements, effects of Reynolds number and Mach number. Airfoil shape definition, Airfoil pressure distribution. Pitching moment. Maximum lift and stall characteristics, high angle of attack range. <b>Rotor Wakes and Blade Tip Vortices:</b> Flow visualization techniques, Characteristics of rotor wake in hover, and forward		<b>8 Hours</b>	<b>L1, L2, L3</b>

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

flight. Other characteristics of rotor wake.		
<b>Module -4</b> <b>Helicopter Stability and Control.</b> Introductory concepts of stability. Forward speed disturbance, vertical speed disturbance, pitching angular velocity disturbance, side-slip disturbance, yawing disturbance. Static stability of helicopters: longitudinal, lateral-directional and directional. Dynamic stability aspects. Main rotor and tail rotor control. Flight and Ground Handling Qualities-General requirements and definitions. Control characteristics, Levels of handling qualities. <b>Flight Testing-</b> General handling flight test requirements and, basis of limitations.	<b>8 Hours</b>	<b>L1, L2, L3</b>
<b>Module -5</b> <b>Standards, and Specifications:</b> Scope of requirements. General and operational requirements. Military derivatives of civil rotorcraft. Structural strength and design for operation on specified surfaces. Rotorcraft vibration classification. <b>Conceptual Design of Helicopters:</b> Overall design requirements. Design of main rotors-rotor diameter, tip speed, rotor solidity, blade twist and aerofoil selection, Fuselage design, Empennage design, Design of tail rotors, High speed rotorcraft.	<b>8 Hours</b>	<b>L1, L2, L3</b>
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply the basic concepts of helicopter dynamics.</li> <li>2. Compute the critical speed by using various methods.</li> <li>3. Distinguish the turborotor system stability by using transfer matrix and finite element formulation.</li> </ol>		
<b>Graduate Attributes:</b> <ul style="list-style-type: none"> <li>○ Engineering Knowledge.</li> <li>○ Problem Analysis.</li> <li>○ Design / development of solutions</li> <li>○ Interpretation of data</li> </ul>		
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>

<b>SPACE MECHANICS</b> <b>(Professional Elective Course)</b>			
Subject Code	<b>18MAE251</b>	CIE Marks	40
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course Objectives:</b> This course will enable students to 1. Understand the basic concepts of space mechanics and the general N-body. 2. Study satellite injection and satellite orbit perturbations. 3. Acquire the knowledge of interplanetary and ballistic missile trajectories.			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b> <b>Space Environment:</b> Peculiarities of space environment and its description, effect of space environment on materials of spacecraft structure and astronauts, manned space missions, effect on satellite life time.		08 Hours	L1, L2
<b>Module -2</b> <b>Basic Concepts and the General N-Body:</b> The solar system, reference frames and coordinate systems, terminology related to the celestial sphere and its associated concepts, Kepler's laws of planetary motion and proof of the laws, Newton's universal law of gravitation, the many body problem, Lagrange-Jacobi identity, the circular restricted three body problem, libration points, the general N-body problem, two body problem, relations between position and time.		08 Hours	L1, L2
<b>Module -3</b> <b>Satellite Injection and Satellite Perturbations:</b> General aspects of satellite injection, satellite orbit transfer, various cases, orbit deviations due to injection errors, special and general perturbations, Cowell's method and Encke's method, method of variations of orbital elements, general perturbations approach.		08 Hours	L1, L2, L3
<b>Module -4</b> <b>Interplanetary Trajectories:</b> Two-dimensional interplanetary trajectories, fast interplanetary trajectories, three dimensional interplanetary trajectories, launch of interplanetary spacecraft, trajectory estimation about the target planet, concept of sphere of influence, Lambert's theorem.		08 Hours	L1, L2

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Module -5</b> <b>Ballistic Missile Trajectories:</b> Introduction to ballistic missile trajectories, boost phase, the ballistic phase, trajectory geometry, optimal flights , time of flight, re-entry phase, the position of impact point, influence coefficients.	<b>08 Hours</b>	<b>L1, L2</b>
<b>Course Outcomes:</b> At the end of this course the student will be able to: <ol style="list-style-type: none"> <li>1. Apply the basic concepts of space mechanics and the general N-body.</li> <li>2. Explain satellite injection and satellite orbit perturbations.</li> <li>3. Distinguish between interplanetary and ballistic missile trajectories.</li> </ol>

<b>FLIGHT TESTING</b> <b>(Professional Elective Course)</b>			
Subject Code	<b>18MAE253</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand the Concept of flight testing and requirement of flight test instrumentation</li> <li>2. Acquire knowledge of flight test techniques</li> <li>3. Know the standards, and specifications of handling qualities</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b> <b>Introduction:</b> Sequence, Planning and governing regulations of flight testing. Aircraft weight and center of gravity, flight testing tolerances. Method of reducing data uncertainty in flight test data -sources and magnitudes of error, avoiding and minimizing errors. <b>Flight test instrumentation:</b> Planning flight test instrumentation, Measurement of flight parameters. Onboard and ground based data acquisition system. Radio telemetry.		10 Hours	L1, L2
<b>Module -2</b> <b>Performance flight testing - range, endurance and climb:</b> Airspeed – in flight calibration. Level flight performance for propeller driven aircraft and for Jet aircraft - Techniques and data reduction. Estimation of range, endurance and climb performance. <b>Performance flight testing - take-off, landing, turning flight:</b> Maneuvering performance estimation. Take-off and landing - methods, procedures and data reduction.		10 Hours	L1, L2
<b>Module -3</b> <b>Stability and control - longitudinal and maneuvering:</b> Static & dynamic longitudinal stability: - methods of flight testing and data reduction techniques. Maneuvering stability methods & data reduction.		10 Hours	L1, L2, L3

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Stability and control - lateral &amp; directional:</b> Lateral and directional static & dynamic stability:-Coupling between rolling and yawing moments. definition of Roll stability. Adverse yaw effects. Aileron reversal. Regulations, test techniques and method of data reduction.		
<b>Module -4</b> <b>Flying qualities:</b> MIL and FAR regulations. Cooper-Harper scale. Pilot Rating. Flight test procedures. <b>Hazardous flight testing:</b> Stall and spin- regulations, test and recovery techniques. Test techniques for flutter, vibration and buffeting.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Module -5</b> <b>Static Directional Stability and Control:</b> Introduction, Definition of directional stability, Static directional stability rudder fixed, Contribution of airframe components, Directional control. Rudder power, Stick-free directional stability, Requirements for directional control, Rudder lock, Dorsal fin. One engine inoperative condition.. Weather cocking effect.	<b>10 Hours</b>	<b>L1, L2, L3</b>
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply the Concept of flight testing and specify the requirement of flight test instrumentation</li> <li>2. Estimate aircraft performance , and stability from flight test data</li> <li>3. Evaluate handling qualities from flight test data</li> </ol>		
<b>Graduate Attributes (as per NBA):</b> <ul style="list-style-type: none"> <li>o Engineering Knowledge.</li> <li>o Problem Analysis.</li> <li>o Design / development of solutions</li> <li>o Interpretation of data</li> </ul>

Subject Code	<b>18MAEL26</b>	CIE Marks	40
Number of Lecture Hours/Week	03	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 02			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Familiarization with various propulsion experimental facilities</li> <li>2. Familiarize with different propulsion experiments and measurement techniques</li> <li>3. Conduct the test, acquire the data and analyse and document</li> </ol>			
Modules			Revised Bloom's Taxonomy (RBT) Level
1. Cascade testing of a model of turbine blade row and study of wake survey.			L1, L2, L3, L4
2. Estimation of propeller performance			L1, L2, L3, L4
3. Forced Convective heat transfer on a flat surface			L1, L2, L3, L4
4. Measurement of Burning Velocity of a Premixed Flame			L1, L2, L3, L4
5. Determination of heat of combustion of aviation fuels			L1, L2, L3, L4, L5
6. Fuel - injection characteristics (spray cone geometry; spray speed etc. for various typer of injectors)			L1, L2, L3, L4
7. Measurement of static overall pressure rise & rotor static pressure rise & fan overall efficiency through axial flow fan unit			L1, L2, L3, L4
8. Effect of inlet flow distortion on measurement of static overall pressure rise & rotor static pressure rise & fan overall efficiency through axial flow fan unit .			L1, L2, L3
9. Investigation of relationship between flame speed and air-fuel ratio for a slow burning gaseous fuel.			L1, L2, L3
10. Construction of flame stability diagram through flame lift up and flame fall back			L1, L2, L3

<b>AIRCRAFT FLIGHT DYNAMICS AND AUTOMATIC FLIGHT CONTROL</b> <b>(Professional Core Course)</b>			
Subject Code	<b>18MAE31</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	SEE Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand the Concept of application of control and airframe parameters</li> <li>2. Acquire knowledge of vehicles equations of motion</li> <li>3. Know the feedback systems and autopilot for pitch, roll, and yaw control</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>Review of feedback system analysis and aerodynamic fundamentals:</b> Mathematical models of linear open loop and closed loop systems, Transfer functions and Bode plot and root locus methods of analysis, analysis of multi-loop vehicular control systems; Definition of airframe parameters, coefficients and reference geometries, aerodynamic characteristics of plan forms and fuselage and effectiveness of control surfaces.		10 Hours	L1, L2
<b>Module -2</b>  <b>Vehicle equations of motion and axis systems:</b> Newton's Second Law and reference frames Expansion of inertial forces and moments, gravity forces and their linearization, Expansion of aerodynamic forces and moments and direct thrust forces, Complete linearized equations of motion, description of dimensional and non-dimensional stability axis derivatives.		10 Hours	L1, L2
<b>Module -3</b>  <b>Longitudinal dynamics:</b> Review of simplifying assumptions and derivation of simplified longitudinal equations of motion, longitudinal controls and control input transfer functions, two degrees of freedom short period approximations and typical example transfer functions of conventional aircraft and their responses Lateral dynamics: Simplified lateral equations of motion, lateral controls and control input transfer functions, two degrees of freedom Dutch roll approximations, typical example transfer functions of conventional aircraft and their responses		10 Hours	L1, L2, L3

CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand the overview of aircraft design process</li> <li>2. Acquire knowledge of configuration layout and design of structural components</li> <li>3. Analyses engine selection and carry out control surface sizing</li> <li>4. Understand design aspects of subsystems</li> </ol>			
Modules		Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>Overview of Design Process:</b> Introduction, Requirements, Phases of design, Conceptual Design Process, Initial Sizing, Take-off weight build up, Empty weight estimation, Fuel fraction estimation, Take- off weight calculation, <b>Thrust to Weight Ratio &amp; Wing Loading:</b> Thrust to Weight Definitions, Statistical Estimate of T/W. Thrust matching, Spread sheet in design, Wing Loading and its effect on Stall speed, Take-off Distance, Catapult take-off, and Landing Distance. Wing Loading for Cruise, Loiter, Endurance, Instantaneous Turn rate, Sustained Turn rate, Climb, & Glide, Maximum ceiling.		<b>10 Hours</b>	<b>L1, L2</b>

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Module -2</b>  <b>Configuration Layout &amp; loft:</b> Conic Lofting, Conic Fuselage Development, Conic Shape Parameter, Wing-Tail Layout & Loft. Aerofoil Linear Interpolation. Aerofoil Flat-wrap Interpolation. Wing aerofoil layout-flap wrap. Wetted area determination. Special considerations in Configuration Layout: Aerodynamic, Structural, Delectability. Crew station, Passenger, and Payload arrangements. <b>Design of Structural Components:</b> Fuselage, Wing, Horizontal & Vertical Tail. Spreadsheet for fuselage design. Tail arrangements, Horizontal & Vertical Tail Sizing. Tail Placement. Loads on Structure. V-n Diagram, Gust Envelope. Loads distribution, Shear and Bending Moment analysis.	10 Hours	L1, L2
<b>Module -3</b>  <b>Engine Selection &amp; Flight Vehicle Performance:</b> Turbojet Engine Sizing, Installed Thrust Correction, Spread Sheet for Turbojet Engine Sizing. Propeller Propulsive System. Propeller design for cruise. Take-off, Landing & Enhanced Lift Devices:- Ground Roll, Rotation, Transition, Climb, Balanced Field Length, Landing Approach, Braking. Enhanced lift design -Passive & Active.	10 Hours	L1, L2, L3
<b>Module -4</b> <b>Static Stability &amp; Control:</b> Longitudinal Static Stability, Pitch Trim Equation. Effect of Airframe components on Static Stability. Lateral stability. Contribution of Airframe components. Directional Static stability. Contribution of Airframe components. Aileron Sizing, Rudder Sizing. Flying qualities. Cooper Harper Scale. Environmental constraints, Aerodynamic requirements.	10 Hours	L1, L2, L3
<b>Module -5</b> <b>Design Aspects of Subsystems:</b> Flight Control system, Landing Gear and subsystem, Propulsion and Fuel System Integration, Air Pressurisation and Air Conditioning System, Electrical & Avionic Systems, Structural loads, Safety constraints, Material selection criteria.	10 Hours	L1, L2, L3
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Define a configuration for given specifications i.e. thrust to weight ratio and wing loading</li> <li>2. Solve problems related to configuration layout &amp; airframe components sizing</li> <li>3. Workout engine selection and perform stability analysis</li> <li>4. Model subsystems</li> </ol>		
<b>Graduate Attributes (as per NBA):</b> <ul style="list-style-type: none"> <li>o Engineering Knowledge.</li> <li>o Problem Analysis.</li> <li>o Design / development of solutions</li> <li>o Interpretation of data</li> </ul>		

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

2. Introduction to Aircraft Design - John Fielding, Cambridge University Press, 2009

<b>M.Tech Aeronautical Engineering</b> <b>Outcome Based Education(OBE) and Choice Based Credit System (CBCS)</b> <b>SEMESTER -III</b>			
<b>THEORY OF AEROELASTICITY</b> <b>(Professional Elective Course)</b>			
Subject Code	<b>18MAE322</b>	CIE Marks	40
Number of Lecture Hours/Week	04	Exam Hours	03
Total Number of Lecture Hours	50	Exam Marks	60
CREDITS – 04			
<b>Course objectives:</b> This course will enable students to <ol style="list-style-type: none"> <li>1. Understand the various aeroelastic phenomenon</li> <li>2. Acquire knowledge of deformation of airframe parts under static and dynamic loads</li> <li>3. Develop the wind tunnel test model similarities</li> <li>4. Understand wind tunnel test techniques</li> </ol>			
<b>Modules</b>		<b>Teaching Hours</b>	<b>Revised Bloom's Taxonomy (RBT) Level</b>

**VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELGAUM**  
**CHOICE BASED CREDIT SYSTEM (CBCS)**  
**SCHEME OF TEACHING AND EXAMINATION 2018-2019**

<b>Module -1</b>  <b>INTRODUCTION</b> <b>Aeroelasticity - Aeroelastic phenomenon:</b> flutter, buffeting, dynamic loads problems, load distribution, divergence, control effectiveness & reversal. <b>Deformation of airplane structures under static loads:</b> Forces acting on aeroplane, Influence coefficients. Properties of influence coefficients. Deformation under distributed forces. Simplified elastic airplane. Bending, torsional and shear stiffness curves.	10 Hours	L1, L2
<b>Module -2</b>  <b>Static aeroelastic phenomena:</b> Load distribution and divergence-wing torsional divergence (two-dimensional case, & finite wing case). Prevention of aeroelastic instabilities. <b>Control effectiveness and reversal :</b> Aileron effectiveness and reversal -2 dimensional case, and finite wing case. Strip theory. Aileron effectiveness in terms of wing - tip helix angle. Critical aileron reversal speed. Rate of change of local pitching moment coefficient with aileron angle.	10 Hours	L1, L2
<b>Module -3</b>  <b>Deformation of airplane structures under dynamic loads:</b> Differential and Integral forms of equations of motions of vibrations. Natural modes and frequencies of complex airplane structures - introduction. Dynamic response phenomenon. <b>Dynamic problems of Aeroelasticity:</b> Determination of critical flutter speed. Aeroelastic modes. Wing bending and torsion flutter. Coupling of bending and torsion oscillations and destabilizing effects of geometric incidences. Flutter prevention and control.	10 Hours	L1, L2, L3
<b>Module -4</b>  <b>Test model similarities:</b> Dimensional concepts. Vibration model similarity laws. Dimensionless form of equation of motion. Mode shapes and natural frequencies in dimensionless forms. Model scale factors. Flutter model similarity law. Scale factors. Structural simulation:-shape, mass and stiffness.	10 Hours	L1, L2, L3
<b>Module -5</b>  <b>Testing techniques:</b> Measurement of structural flexibility, natural frequencies and mode shapes. Polar plot of the damped response. Identification and measurement of normal modes. Steady state and dynamic Aeroelastic model testing.	10 Hours	L1, L2, L3
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply knowledge of aeroelasticity towards aircraft design</li> <li>2. Demonstrate deformation of airframe parts under static and dynamic loads</li> <li>3. Model wind tunnel test similarities &amp; Perform wind tunnel testing</li> </ol>

Modules	Teaching Hours	Bloom's Taxonomy (RBT) Level
<b>Module -1</b>  <b>General Considerations.</b> Characteristics General features of hypersonic flow field. Assumptions underlying inviscid hypersonic theory. Normal shock waves, oblique & curved shocks. Mach number independence principles. General strip theory.  <b>Small Disturbance Theory.</b> Introduction to basic equations. Hypersonic Similitude, United supersonic-hypersonic similitude. Slender – body strip theory.	10 Hours	L1, L2
<b>Module -2</b>  <b>Small Disturbance Theory.</b> Slightly blunted slender bodies, large incidence & correlation of Similitude. Unsteady flow theory. Non equilibrium effects.  <b>Newtonian Theory.</b> Two-dimensional axis symmetric bodies, simple shapes & free layers. Optimum shapes, shock layer structure.	10 Hours	L1, L2
<b>Module -3</b>  <b>Newtonian Theory.</b> Shock layer structure with cross flow. Conical flow, bodies of revolution at small incidences.  <b>Theory of Thin Shock Layers.</b> Basic concepts, successive approximation schemes. Constant stream tube-area approximation. Two-dimensional axis symmetric blunt faced bodies.	10 Hours	L1, L2, L3
<b>Module -4</b> <b>Viscous Flows.</b> Hypersonic Viscous effects, Boundary Layer equations. Similar laminar boundary layer solutions. Local similarity concept. Viscous interactions - flow models and interaction parameters. Weak pressure interaction. Strong pressure interaction. General features of rarified gas flows.	10 Hours	L1, L2, L3
<b>Module -5</b>  <b>Hypersonic Testing.</b> Hypersonic Scaling, high enthalpy & high speed, types of hypersonic facilities. Shock tunnels & expansion tubes. Features of Hypersonic wind tunnel design. Instrumentation to hypersonic vehicle testing. Test model similarity laws.	10 Hours	L1, L2, L3
<b>Course outcomes:</b> After studying this course, students will be able to: <ol style="list-style-type: none"> <li>1. Apply knowledge of oblique and curved shock waves and shock wave structure</li> <li>2. Solve problems related to hypersonic viscous effects</li> </ol>

		(RBT) Level
<b>Module -1</b>  <b>Fracture Mechanics Principles:</b> Introduction, Mechanisms of Fracture, a crack in a structure, the Griffith's criterion, modern design, - strength, stiffness and toughness. Stress intensity approach. <b>Stress Analysis for Members with Cracks:</b> Linear elastic fracture mechanics, Crack tip stress and deformations; Relation between stress intensity factor and fracture toughness, Stress intensity based solutions. Crack tip plastic zone estimation, Plane stress and plane strain concepts. The Dugdale approach, the thickness effect.	10 Hours	L1, L2
<b>Module -2</b>  <b>Elastic - Plastic Fracture Mechanics:</b> Introduction, Elasto-plastic factor criteria, crack resistance curve, I-integral, Crack opening displacement, crack tip opening displacement. Importance of R-curve in fracture mechanics, Experimental determination of I-integral, COD and CTOD.	10 Hours	L1, L2
<b>Module -3</b>  <b>Dynamic and Crack Arrest:</b> Introduction, the dynamic stress intensity and elastic energy release rate, crack branching, the principles of crack arrest, and the dynamic fracture toughness.	10 Hours	L1, L2, L3
<b>Module -4</b> <b>Fatigue and Fatigue Crack Growth Rate:</b> Fatigue loading, Various stages of crack propagation, the load spectrum, approximation of the stress spectrum, the crack growth integration, fatigue crack growth laws.  <b>Fracture Resistance of Materials:</b> Fracture criteria, fatigue cracking criteria, effect of alloying and second phase particles, effect of processing and anisotropy, effect of temperature, closure.	10 Hours	L1, L2, L3
<b>Module -5</b>  <b>Computational Fracture Mechanics:</b> Overview of numerical methods, traditional methods in computational fracture mechanics – stress and displacement marching, elemental crack advance, virtual crack extension, the energy domain integral, finite element implementation. Limitations of numerical fracture analysis.  <b>Fracture Toughness testing of metals:</b> Specimen size requirements, various test procedures, effects of temperature, loading rate and plate thickness on fracture toughness. Fracture testing in shear modes, fatigue testing, NDT methods.	10 Hours	L1, L2, L3

Modules	Teaching Hours	Revised Bloom's Taxonomy (RBT) Level
<b>Module -1</b> <b>Introduction:</b> Need For Gas Turbine Engine Testing And Evaluation, Philosophy Of Testing, Rationale Of Testing. Types of tests: Proof of Concepts, Design Verification, Design Validation, and Formal Tests. <b>Aero Thermodynamic Tests: Compressor:</b> Compressor scaling parameter Groups, Compressor MAP. Inlet distortions. Surge margin stack up. Testing and Performance Evaluation, Test rig.	10 Hours	L1, L2
<b>Module -2</b> <b>Combustor:</b> Combustor MAP, Pressure loss, combustion light up test. Testing and Performance Evaluation. <b>Aero Thermodynamic Tests: Turbines:</b> Turbine MAP. Turbine Testing and Performance Evaluation. Component model scaling. <b>Inlet duct &amp; nozzles:</b> Ram pressure recovery of inlet duct. Propelling nozzles, after burner, maximum mass flow conditions. Testing and Performance Evaluation.	10 Hours	L1, L2
<b>Module -3</b> <b>Engine performance:</b> Design & off-design Performance. Transient performance. Qualitative characteristics quantities. Transient working lines. Starring process & Wind milling of Engines. Thrust engine start envelope. Calculations for design and off-design performance from given test data – (case study for a Jet Engine).	10 Hours	L1, L2, L3
<b>Module -4</b> <b>Qualification Tests:</b> Tests used to evaluate a design. Environment ingestion capability. Preliminary flight rating tests, Qualification testing, acceptance tests, Reliability figure of merit. Structural integrity tests: Design Verification Tests, Durability and Life Assessment Tests, Reliability Tests, Failure Simulation Tests, Functional and Operability Tests. <b>Types of engine tests:</b> Normally Aspirated Testing, Ram Air Testing, Altitude Testing, Flying Test Bed, Mission Oriented Tests, Open Air Test Bed, Ground Testing of Engine Installed in Aircraft, Flight testing.	10 Hours	L1, L2, L3
<b>Module -5</b> <b>Test cell:</b> Air breathing engine test facility. Direct connect altitude cell, propulsion wind tunnels. Types of engine test beds. Factors for design of engine test beds. Altitude test facility. Steps in test bed cross calibration. Engine testing with simulated inlet distortions. Surge test. Cell Calibration and Correction. Performance Reduction Methodology. Instrumentation: Data Acquisition, Measurement of Thrust, Pressure, Temperature, Vibration, etc. Accuracy and Uncertainty in	10 Hours	L1, L2, L3
