18CGT321	Earth and Earth Retaining Structures	18CGT331	Earth and Rock fill dams
18CGT322	Earth quake Resistant Design of Foundations	18CGT332	Expansive Soil Engineering
18CGT323	Forensic Geotechnical Engineering	18CGT333	Offshore Geotechnical Engineering
18CGT324	Optimization Techniques in Geotechnical Engineering	18CGT334	Reinforced Soil Structures

Note:

1. Project Phase-1: Students in consultation with the guide/co-guide if any, shall pursue literature survey and complete the preliminary requirements of selected Project work. Each student shall prepare relevant introductory project document, and present a seminar.

CIE marks shall be awarded by a committee comprising of HOD as Chairman, Guide/co-guide if any, and a senior faculty of the department. The IA marks awarded for project work phase-1, shall be based on the evaluation of Project Report, Project Presentation skill and Question and Answer session in the ratio 50:25:25.

SEE (University examination) shall be as per the University norms.

2. Internship: Those, who have not pursued /completed the internship, shall be declared as failed and have to complete during subsequent University examinations after satisfying the internship requirements.

Internship SEE (University examination) shall be as per the University norms.

Grand Total (I to IV Sem.) : 2000 Marks; 88 Credits								

Note:

1. Project Phase-2:

IA marks shall be awarded by a committee comprising of HOD as Chairman, Guide/co-guide, if any, and a Senior faculty of the department. The CIE marks awarded for project work phase -2, shall be based on the evaluation of Project Report subjected to plagiarism check, Project Presentation skill and Question and Answer session in the ratio 50:25:25.

Semester End Exam (SEE) shall be at the end of IV semester. Project work evaluation and Viva-Voce examination (SEE), after satisfying the plagiarism check, shall be as per the University norms.

SYLLABUS FOR M. Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I**Subject: Finite Elements in Geotechnical Engineering**

Subject Code	18CGT11	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> • Understanding the capacity of the soil under different field conditions. • Design of shallow foundations under different loading condition and different environment. • Design of footings for uniform settlement of all shallow foundations. 			
Modules			Teaching Hours
Module -1			
Introduction: General, General Description methods, Brief description of FEA for stress analysis problem, Finite element method v/s Classical method. FEM v/s FDM a brief history of FEM, need for studying FEM.			10 Hours
Module -2			
Basic equations in Elasticity: Introduction, Stress in typical element, Equations of equilibrium, Strains, Strain displacement equations, Linear constitutive law.			10 Hours
Module -3			
Finite element basics: Introduction, Elements, Shape functions, Co-ordinate transformation, Strain displacement relations, Stiffness equations, Body forces, Surface tractions, Geotechnical considerations: effective stress method loadings, Initial stresses, excavation, fills.			10 Hours
Module -4			
Variable – Elastic stress – Strain laws: Introduction, Bi-linear elastic model, K-G model, Hyperbolic model, Comparison of models. Critical state model: Introduction, the geometric model, Hardening law, Yield function, Flow rule, Stress- strain invariant relation, Stress – strain component relation, Parameter values, Examples.			10 Hours
Module -5			
Seepage analysis: Introduction, Finite element discretization of seepage equation, computation of velocities and flows, treatment of free surface boundary. Analysis of jointed rock mass: Introduction, Characteristics and discontinuities in rock masses, models behaviour of jointed rocks, generalized plane strain analysis in rock mechanics, effective stress analysis in undrained rock masses.			10 Hours
Course outcomes:			
During this course, students will be trained:			
<ul style="list-style-type: none"> • To understand the basic concepts of finite element analysis in general and the transition from structural engineering aspects to geotechnical engineering aspects. • To understand the finite element techniques for seepage analysis and joint rock masses. • In Finite element applications in design and Analysis of bearing capacity of the soil for shallow foundations. 			
Question paper pattern:			
<ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question consists of 20 marks. • There will be 2 full questions (with a maximum of four sub questions) from each module. • Each full question will have sub questions covering all the topics under a module. 			
The students will have to answer 5 full questions, selecting one full question from each module.

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I**Subject: Sub-surface Investigations and Ground Improvement Techniques**

Subject Code	18CGT12	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Identify the soil type of soil from a job site or in a professional setting, determine that soil's properties based on type and evaluate design decisions from your understanding of that soil's properties.
- To explore the scientific principles used to describe the major engineering properties of soil, and the engineering testing methods used to quantify these properties
- To explore the site improvement techniques

Modules	Teaching Hours
Module -1 SITE INVESTIGATION: Planning and experimental programme, investigations, exploration for preliminary design, exploration for detailed design, Geo-physical explorations, soundings, probings, boring, boring methods, excavation methods for explorations, ground water investigations, rock boring, miscellaneous exploratory techniques. Numerical problems.	10 Hours
Module -2 SAMPLING AND IN-SITU FIELD TESTS: Types of samples, samplers, preservation, shipment and storage of samples, bore log, pore pressure measurements, core recovery, rock strength, rock quality designation In-situ field testing and laboratory investigation of soils and rock, measurement techniques: SPT, SCPT, DCPT, pressuremeter, dilatometer, plate load test. Numerical problems.	10 Hours
Module -3 DATA INTERPRETATION: Data interpretation for determination of engineering properties of soils and their application to geotechnical design, preparation of site investigation reports	10 Hours
Module -4 SITE IMPROVEMENT: General methods of stabilization – shallow and deep, factors governing suitable method, compaction, Drainage: soil and filter permeability, filter criteria, drainage layout and pumping system, Pre-compression and consolidation: principles, sand drains, pore pressure distribution, electro-osmotic and chemical osmotic consolidation. Numerical problems	10 Hours
Module -5 STABILIZATION: Mechanical stabilization, lime, cement, bitumen, chemical etc. Grouting: Injection and principles, grouting pressure criteria, grouting equipment, injection chemicals, Thermal methods: heating and cooling effects on soils, equipment, Miscellaneous: moisture barriers and preventing techniques	10 Hours

Course outcomes:

During this course, students will be trained:

- To explore and understanding the behaviour of soils using index, compaction and engineering properties for the design of foundations.
- To adopt suitable f ground improvement techniques to alter the geotechnical properties to suit any type of foundations based on the load coming from the super structure on to the foundation and soil

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Engineering Principles of Ground Modifications** – Hausmann, McGraw Hill.
2. **Foundation Analysis and Design** – J E Bowles, Tata McGraw Hill.
3. **Subsurface Exploration and Sampling of Soils for Civil Engg. Purposes** – Hvorslev M J,
4. **Ground Improvement Techniques** by P. Purushotham Raj.
5. **Foundation Engineering** by S P Brahma.

Reference Books:

1. **Soil Mechanics, T.W. Lambe and R.V. Whitman.** John Wiley & Sons, 1969.
2. **Geotechnical Engineering-** Donald P Coduto Phi Learning Private Limited, New Delhi
3. **Geotechnical Engineering-** Shashi K. Gulathi & Manoj Datta. (4009), “Tata Mc Graw Hill.
4. **Soil Mechanics and Foundation Engg.- Muni Budhu (4010),** 3rd Edition, John Wiely & Sons
5. **Soil Mechanics for Road Engineers** – HMSO.

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I**Subject: Design of Shallow Foundations**

Subject Code	18CGT13	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Understanding the capacity of the soil under different field conditions.
- Design of shallow foundations under different loading condition and different environment.
- Design of footings for uniform settlement of all shallow foundations.

Modules	Teaching Hours
Module -1	
Bearing Capacity of Foundations: Introduction, Types of shallow foundations, General requirements of foundations, Modes of shear failure, Bearing capacity equations (Terzaghi's, Meyerhof's, Brinch Hansen's and IS code method), Footings with eccentric loadings, Effect of water table on bearing capacity. Bearing capacity from SPT, SCPT, DCPT and Field plate load tests. Evaluation from in-situ tests codal recommendations. Numerical Problems.	10 Hours
Module -2	
Bearing Capacity for footings on homogeneous and layered soils, slopes, Bearing capacity of foundations with uplift or tension forces, Bearing capacity of rock, Bearing capacity based on Building codes (Presumptive pressure), Safety factors in Foundation Design, Numerical Problems.	10 Hours
Module -3	
Settlement analysis: Immediate settlement, Consolidation settlement and Secondary consolidation settlements, With codal provisions. Numerical problems. Contact pressure under footings – Contact pressure under rigid rectangular footing, strip foundation, rigid circular footing, Principles of footing design, Design of non – rigid combined footings. Numerical problems.	10 Hours
Module -4	
Foundations on sanitary landfill site, recent refuse fills, residual soils, permafrost and adjoining to the river bed. Proportionating of shallow footings, Introduction to special foundations, Foundation design in relation to ground movements.	10 Hours
Module -5	
Design of Raft foundations- types of rafts, Bearing capacity of mat foundations, Mat settlements, Modulus of subgrade reactions for mats and subgrades, Numerical problems. Allowable soil pressures for rafts in cohesionless and cohesive soils, Design of raft by rigid beam method and Winkler method, Solution based on elastic half space and based on elastic theory.	10 Hours

Course outcomes:

During this course, students will be trained to:

- Analyse the bearing capacity of the soil for shallow foundations
- Design aspects of Raft foundations for achieving uniform settlement for special structures like watertanks
- Structural design of shallow foundations in all conditions like land-fills, pavements etc in varying conditions including seismic areas
- Proper communication with structural and other engineers

Question paper pattern:

- The question paper will have ten questions.
 - Each full question consists of 20 marks.
 - There will be 2 full questions (with a maximum of four sub questions) from each module.
 - Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Foundation Engineering**, Verghese P C. (2011)– PHI, India
2. **Foundation Engineering**, Teng (1992) - PHI, India
3. **Foundation Engineering**, Bajra M Das.(4012), Cengage Learning India
4. **Foundation Analysis and Design**, J E Bowles(2012), McGraw Hill, Inc.

Reference Books:

1. **Foundation Engineering**, Peck hanson & Thronburg (1974). John Wiley & Sons,.
2. **Analysis and design of Substructures-** Swami Saran (2009), Oxford & IBH
3. **Foundation Engineering** Naryana S Naik (2012), Dhanphat Rai publishers, New Delhi
4. **Geotechnical Engg.-** P. Purushothamraj (2010), Tata McGraw Hill

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I**Subject: Advanced Soil Mechanics**

Subject Code	18CGT14	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			

Course objectives: This course will enable students :

- To explore the scientific principles used to describe the major engineering properties of soil, and the engineering testing methods used to quantify these properties.
- To explain role of water in soil behavior with change in soil stresses, permeability and quantity of seepage including flow net are estimated.
- To determine shear parameters and stress changes in soil due to foundation loads.
- To estimate the magnitude and time-rate of settlement due to consolidation.

Modules	Teaching Hours
Module -1 Geostatic Stresses: Effective stress principle, Geostatic stresses, Soil water hydro statics and dynamics, Numerical Problems Lambe's compaction theory, Structural and Engineering properties of compacted soils, Laboratory compaction tests, Field compaction control related problems, Numerical Problems.	10 Hours
Module -2 Immediate settlement – Methods of determination, Preconsolidation pressure, stress history, One and Three dimensional differential consolidation equation, Time rate of consolidation, pre compression of clay deposits with and without sand drains, Secondary consolidation, factors affecting, Numerical Problems.	10 Hours
Module -3 Shear strength parameters of cohesionless and saturated cohesive soils, Principle of effective stress, effect of rate of strain on shear parameters, Stress – Strain relationship, Pore pressure coefficients, Concept of stress path, Laboratory and Field testing their limitations, Numerical Problems.	10 Hours
Module -4 Stability Analysis of Slope: Effective and total stress approach, shape of slip surface, Swedish method, methods of slices, location of centre of critical slip circle, Friction circle method, Taylor's stability number, Bishop's rigours analysis, stability during critical conditions, Numerical Problems.	10 Hours
Module -5 Elastic theories of stress distribution in soils -Bousinesq's, Westergaard's, Bermister's theories. Different conditions of loading, Isobars, Newmark's chart, Numerical problems.	10 Hours

Course outcomes:

During this course, students will be trained:

- To analyze the soil stresses, permeability and seepage for the existing field conditions
- To understand the compressibility behaviour of soil and consolidation settlement along with time rate of settlement.
- To develop suitable method for analyzing the slope stability.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **An Introduction to the Mechanics of Soils and Foundation - Atkinson J. H.** - McGraw- Hill Co. (1993)
2. **Soil Mechanics SI version- Lambe, T. W. and Whitman, R. V,** John Wiley & Sons.(2011)
3. **Soil Mechanics and Foundations, Muniram Budhu(2007),** John Wiley & Sons, Inc.

Reference Books:

1. **Geotechnical Engineering-** Donold P Coduto Phi Learning Private Limited, New Delhi
2. **Soil Mechanics- J A Knappett and R F Craig Eighth Edition(4012), Spon Press Taylor & Francis.**

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I**Subject: Geotechnology and Advanced Soil Testing**

Subject Code	18CGT15	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students :

- To explore the scientific principles used to describe the major engineering properties of soil, and the engineering testing methods used to quantify these properties.
- To explain role of water in soil behavior with change in soil stresses, permeability and quantity of seepage including flow net are estimated.
- To determine shear parameters and stress changes in soil due to foundation loads.
- To estimate the magnitude and time-rate of settlement due to consolidation.

Modules	Teaching Hours
Module -1 Factors influencing nature and formation of soils. Soils as a multiphase material, Complexity of soil nature, Typical soil deposits with special reference to Indian soils. Basic engineering properties of different soils and their uses. Study of rocks: Formation, basic types of rocks, igneous, sedimentary, metamorphic rocks and their classification. Geological structures: Folds, faults and joints, their classification, criterion for the identification of faults and other discontinuities.	10 Hours
Module -2 Soil structure – Types of bonds, Important clay minerals, atomic structure and symbolic representation. Base exchange capacity, Guoy-chapman diffuse double layer theory, clay structure measurement – X- ray diffraction, SEM studies, DTA, Pore size analysis.	10 Hours
Module -3 Tests for Index properties of soils – Specific gravity, grain size analysis (both sieve and hydrometer analysis), Atterberg’s limits, Relative merits and Demerits of different methods. Numerical problems.	10 Hours
Module -4 Tests for engineering properties of soils – Compaction, Consolidation characteristics, Permeability, Shear tests including pore pressure measurements (UU, CU, CD tests). Numerical problems.	10 Hours
Module -5 Field tests for soils: Plate load test, SPT, SCPT, DCPT and their uses. Numerical problems.	10 Hours

Course outcomes:

During this course, students will be trained:

- Analyze the soil stresses, permeability and seepage for the existing field conditions
- To understand the compressibility behaviour of soil and consolidation settlement along with time rate of settlement
- To develop suitable method for analyzing the slope stability.
- To understand the behaviour of soils at critical state

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.

- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **An Introduction to the Mechanics of Soils and Foundation - Atkinson J. H. - McGraw- Hill Co. (1993)**

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

Subject: Advanced Geotechnical Engineering -1

Subject Code	18CGT16	IA Marks	40
Number of Lecture Hours/Week	03	Exam Marks	60
Total Number of Lecture Hours	42	Exam Hours	03

CREDITS – 02

Course objectives: This course will enable students to

- The objective of this course is to make students to learn principles and design of experiments.
- To investigate the performance of various Soils

Modules	Teaching Hours
Determination of Specific gravity and Moisture content	3 hours
Determination of In-situ density	3 hours
Wet sieve analysis and hydrometer analysis	3 hours
Determination of Atterberg's Limits	9 hours
Determination of OMC and MDD (Standard and Modified Proctor test)	6 hours
Determination of coefficient of permeability (Variable head method and Constant head method)	3 hours
Determination of Undrained shear strength parameters from shear tests (Direct, UCS, Triaxial shear)	9 hours
California bearing ratio test	3 hours

Course outcomes:

During this course, students will be trained :

- Achieve Knowledge of Design and development of experimental skills.
- Understand the principles of design of experiments.

Question paper pattern:

- Individual experiments can be set as single experiment
- All questions are to be framed such that they should relate to field

Text Books:

1. Joseph E Bowles, "Engineering Properties of soil and their measurements", McGraw hill.
2. Manual of soil laboratory testing, K. H. Head, ELE International Ltd. Pentech press.

Reference Books:

1. John T. Germaine, Amy V. Germaine, (2009) "Geotechnical Laboratory Measurements", John Willey
2. William Lambe, (2003) "Soil Testing for Engineers", MIT.

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Theoretical Soil Mechanics**

Subject Code	18CGT21	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- To impart the knowledge for computation of settlements and stress in semi-infinite elastic soil medium.
- Settlements and stress in anisotropic medium and layered deposits due to foundation loads.
- Concept on plastic collapse.

Modules	Teaching Hours
Module -1 Introduction – Elasticity and stability problems, concept of stress and strain – plane stress, plane strain and axisymmetric problems – equation of equilibrium and compatibility – stress functions.	10 Hours
Module -2 Stresses in elastic half-space medium by external loads – fundamental solutions – Boussinesq, Flamant, Kelvin and Mindlin solution – Applications of fundamental solutions – Anisotropic and non-homogeneous linear continuum – Influence charts - elastic displacement-layered soil-Burmister method.	10 Hours
Module -3 Limit equilibrium analysis – perfectly plastic material – stress – strain relationship – stress and displacement field calculations – slip line solutions for undrained and drained loading, arching of soils and theories of arching.	10 Hours
Module -4 Limit analysis – principles of virtual work – theorems of plastic collapse – Mechanism for plane plastic collapse – Simple solutions for drained and undrained loading – stability of slopes, cuts and retaining structures. Centrifuge model – Principles and scale effects, practical considerations.	10 Hours
Module -5 Seepage Analysis: Laplace's equation for two dimensional flow of water through soils, flownets, properties and uses of flownets, phreatic line, graphical and analytical procedures for determination of quantity of seepage, prevailing hydraulic head and exit gradient in homogeneous earth dam, uplift pressure, sketching of flownets for typical hydraulic structures – weirs, dams, sheet pile walls.	10 Hours

Course outcomes:

During this course, students will be trained :

- To evaluate the theoretical aspects like stresses, limiting stresses etc
- To understand the stability aspects collapse mechanisms, centrifuge modeling, Estimate the stresses in soils, Flownet and related problems

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Foundations of Theoretical Soil Mechanics**, Harr, M.E (1966) McGraw Hill,
2. **Foundation Engineering Handbook**, Winterkorn, H.F., and Fang, H.Y(4000) Galgotia, Booksource, 4000
3. **Theoretical Soil Mechanics- Karl Terzaghi (1943)**, John Wiley & Sons.
4. **Soil Mechanics and Foundations, Muniram Budhu(2007)**, John Wiley & Sons, Inc.

Reference Books:

1. **Soil Mechanics, T.W. Lambe and R.V. Whitman(1969)**. John Wiley & Sons,.
2. **Foundations and slopes-** Atkinson (1981), McGraw Hill, New Delhi
3. **Seepage, Drainage and Flownets – Cedergren H R(1997).**-, John Wiley & Sons
4. **The Mechanics Basic concepts and Engineering Applications-** Aysen A (4002), AA Balkema Publishers, 4002

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Soil Dynamics**

Subject Code	18CGT22	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- To study vibration concepts in soils like damping, wave propagation, resonance and effect of modes of vibrations.
- To study dynamic soil properties. Determination of dynamic properties by field and laboratory tests
- Effect of liquefaction and anti liquefaction measures.
- To study vibration isolation, machine foundation design.

Modules	Teaching Hours
Module -1 Theory of vibration- single degree, two degree and multi degree of freedom system. Free and forced vibration, transient response, resonance and its effects.	10 Hours
Module -2 Wave Propagation – theory and application to dynamic problems, dynamic soil properties-general, laboratory and field methods, factors affecting. Different properties, vibration inducing and measuring instruments.	10 Hours
Module -3 Shear strength and liquefaction of soils- stress, strain, strength characteristics of soils under dynamic loads. Factors affecting, resonance column test, triaxial test under dynamic loads. Liquefaction of soils and factors influencing liquefaction, dynamic earth pressure, retaining wall problems under dynamic loads.	10 Hours
Module -4 General principles of machine foundation design- introduction, design criteria, types and requirements of machine foundations, foundations for reciprocating machines, foundations for forge hammers, foundations for turbo generators.	10 Hours
Module -5 Vibration isolation- introduction, mechanical isolators, isolation by artificial barriers, active and passive isolation, case histories of foundation of isolation.	10 Hours

Course outcomes:

During this course, students will be trained :

- To develop a mechanism to design the foundations for resisting vibrations and achieve static equilibrium conditions of structures
- To understand the classical geotechnical failures due to liquefaction and mitigate the same.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Soil Dynamics and Machine Foundation (4010)**, Swami Saran, Galgotia Publications Pvt. Ltd.
2. **Soil Dynamics(1981)**- Prakash, S. McGraw Hill Book Company

4. **Principles of Soil Dynamics (4002)** Das, B. M., PWS KENT publishing Company, Boston.

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Design of Deep Foundations**

Subject Code	18CGT23	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Know the design of deep foundation.
- Type of deep foundations will be provided for different structures.
- Understand the special foundations.

Modules	Teaching Hours
Module -1 Single pile - Static capacity and lateral loads: Introduction, Timber, Concrete, Steel piles, Corrosion of steel piles, Soil properties for static pile capacity, Ultimate static pile point capacity, Skin resistance, Static load capacity using load transfer, load test data, Tension piles, Piles for resisting uplift, Laterally loaded piles, Numerical problems.	10 Hours
Module -2 Single pile – Dynamic analysis and load tests: Dynamic analysis, Pile driving, Rational pile formulae, other dynamic pile driving formulae and general considerations, Reliability of dynamic pile driving formulae. The wave equation, pile load tests, pile driving stresses, general comments on pile driving, Numerical problems.	10 Hours
Module -3 Pile foundations – Group, Single pile v/s Pile group, Pile group considerations, efficiency of pile groups, stresses on underlying strata from piles, settlements of pile groups, pile caps, Batter piles, Negative skin friction, Numerical problems.	10 Hours
Module -4 Well Foundation: Design and construction. Bearing capacity, settlement and lateral resistance. Tilts and shifts, Numerical problems. Drilled Shaft: Construction procedures, Design Considerations, Load Carrying Capacity and settlement analysis, Numerical problems.	10 Hours
Module -5 Special Topics of Foundation Engineering Foundations on Collapsible Soils: Origin and occurrence, Identification, Sampling and Testing, Preventive and Remedial measures. Foundations on Expansive Soils: The nature, origin and occurrence, Identifying, testing and evaluating expansive soils, typical structural distress patterns and Preventive design & construction measures, Numerical Problems.	10 Hours

Course outcomes:

During this course, students will be trained :

- To analyze and adopt design skills of vertical and batter piles for various types of loading and soil conditions.
- To design the sheet piles and under reamed piles in expansive soils.
- To design the well foundations (caissons).

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Analysis and design of Substructures (2009)**, Swami Saran, Oxford & IBH Publications Pvt. Ltd.
2. **Foundation design in practices (2010)**- Kaurna Moy Ghosh. PHI
3. **Foundation engineering (2012)**- J E Bowles, McGraw Hill

Reference Books:

2. **Design of Foundation Systems (1992)**N.P. Kurien: Principles & Practices, Narosa, New Delhi
3. **Foundation Engineering Hand Book (1990)**, H. F. Winterkorn and H Y Fang Galgotia Booksource

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Case Histories in Geotechnical Engineering**

Subject Code	18CGT241	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Understanding the failure mechanism in geotechnical engineering.
- Evaluating the soil as different construction materials and its behavior.
- Role of soil in past and future in construction industry.

Modules	Teaching Hours
Module -1 Geotechnical problems in civil engineering and in foundations, Soil as construction material in slopes and excavations, Geotechnical problems in underground and earth retaining structures.	10 Hours
Module -2 Behaviour of different soils under different foundations and different environmental conditions. Calculated risk and safety factors in applied soil engineering.	10 Hours
Module -3 Past and future of applied soil mechanics, Effect of pore water pressure.	10 Hours
Module -4 New concepts in consolidation settlements, settlements and bearing capacity.	10 Hours
Module -5 Case histories- typical cases of performance failure of representative of soil engineering projects namely shallow and deep foundations, slope stability, earth dams, retaining structures , machine foundations etc.,	10 Hours

Course outcomes:

During this course, students will be trained:

- To develop a model for the behaviour of the soil from the existing or past data.
- To prediction the failures based on the material and soil behavior.
- To develop new approaches for design of stable structures by understanding the case histories for failure of foundation structures and arrive at classical geotechnical behaviour to contract the failures.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Fundamentals of soil behaviour** – J K Mitchel. (4012)- McGraw- Hill Co.
2. **Soil Mechanics SI version-** Lambe, T. W. and Whitman, R. V. ,(4011) John Wiley & Sons
3. **Soil Mechanics and Foundations**, Muniram Budhu(4011), John Wiley & Sons, Inc.
4. **Soil Mechanics**, JE.Bowles (4012), McGraw Hill

Reference Books:

2. **Geotechnical Engineering-** Donold P Coduto Phi Learning Private Limited, New Delhi
3. **Literatures for Case Histories from known Journals (ASCE, Elsevier, Canadian Geotechnical Journal etc.,)**

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: PAVEMENT ANALYSIS AND DESIGN**

Subject Code	18CGT244	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Identify the type of pavement and to know the stress distribution.
- Learn the deflection criteria in soils for different pavements.
- To know the characteristics of the rigid pavements and flexible pavements.

Modules	Teaching Hours
Module -1 INTRODUCTION: Types and component parts of pavements, factors affecting design and performance of pavements, highway and airport pavements.	10 Hours
Module -2 STRESSES AND DEFLECTION IN FLEXIBLE PAVEMENTS: Stresses and deflections in homogeneous masses, two, three and multi-layer theories, wheel load stresses, various factors in traffic wheel loads, ESWL of multiple wheels, repeated loads and EWL factors, sustained loads, pavement behaviour under transient traffic loads.	10 Hours
Module -3 FLEXIBLE PAVEMENT DESIGN METHODS FOR HIGHWAYS AND AIRPORTS: Empirical, semi-empirical and theoretical approaches, development, principle, design steps, advantages and application of the different pavement design methods including IRC, AASHTO and Asphalt Institute methods.	10 Hours
Module -4 STRESSES AND DEFLECTIONS IN RIGID PAVEMENTS: Types of stresses and causes, factors influencing the stresses, general considerations in rigid pavement analysis, EWL, wheel load stresses, warping stresses, frictional stresses, combined stresses.	10 Hours
Module -5 RIGID PAVEMENT DESIGN: Types of joints in cement concrete pavements and their functions, joint spacing, design of CC pavement for roads and runways, design of joint details for longitudinal joints, contraction joints and expansion joints, IRC method of design by stress ratio method, Design features of CRCP, SFRC and ICBP, Problems, design of continuously reinforced concrete pavements.	10 Hours
Course outcomes: During this course, students will be trained : <ul style="list-style-type: none"> • For the design of flexible and rigid pavements at different soil conditions. • To understand the behaviour of the stresses and deflections at different loading and soil conditions. 	
Question paper pattern: <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question consists of 20 marks. • There will be 2 full questions (with a maximum of four sub questions) from each module. 	

- Each full question will have sub questions covering all the topics under a module.
The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Principles of Pavement Design** – Yoder E J, Witzak, John Wiley and Sons
2. **Soil Mechanics for Road Engineers** – RRI and DSIR, HMSO Publication
3. **Design of Functional Pavements** – Huang, McGraw Hill Book Co.
4. **Development in Highway Engineering** – Pell Peter S, Applied Science Publishers, London
5. **Pavement Analysis** – Huang, Elsevier Publications.

Reference Books:

1. **IRC Publications.**
2. **CMA Handbook.**

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Critical State Soil Mechanics**

Subject Code	18CGT242	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Calculation of stress trajectories and deformations using stress invariants
- Elastic-plastic constitutive equation
- Approximate and exact method of solutions
- Constitutive models for unsaturated soils

Modules	Teaching Hours
Module -1 Basic concepts in critical stress concepts. Concepts of stress, strain, stress increment and strain increment, spherical and deviator tensors. Isotropic continuum for two elastic constants, Principal stress space, two alternate yield function, plastic potential function and normality condition. Isotropic hardening and stability criteria and numerical problems.	10 Hours
Module -2 Seepage with two and three dimensional seepage, Mathematical solutions for the seepage below the sheet piles. One dimension consolidation, approximate and exact solution to the consolidometer test, granta-gravel, numerical problem.	10 Hours
Module -3 Cam-clay model and critical state concept (including the compression, undrained tests on cam-clay), Plastic compressibility and the index tests, interpolation of data from axial tests on saturated clays with numerical problems.	10 Hours
Module -4 Coulomb's failure equation and the choice of strength parameter - Coulomb's failure equation, Hvorselv's experiments on strength of clay, principal stress ratio. Failure mechanism and the residual strength on the sliding surface with numerical problems.	10 Hours
Module -5 Two dimension fields of limiting stresses- Coulomb's analysis of active and passive earth pressure, friction circle method, stability due to cohesion. Discontinuous limiting stress field solutions to the bearing capacity problems, upper and lower bound to a plastic collapse load. Basic equation for limiting stresses and their characteristics in purely cohesive soils and numerical solutions.	10 Hours

Course outcomes:

During this course, students will be trained:

- To understand the behaviour of soil under normal and plastic condition.
- To develop a new models along with cam-clay.

Question paper pattern:

- The question paper will have ten questions.
 - Each full question consists of 20 marks.
 - There will be 2 full questions (with a maximum of four sub questions) from each module.
 - Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **An Introduction to the Mechanics of Soils and Foundation - through critical state soil mechanics-** Atkinson J. H. (1993) - McGraw- Hill Co.
2. **Soil Behavior and Critical State Soil Mechanics** Wood, D.M (1991)- Cambridge university press
3. **Critical state Soil Mechanics-** Andrew Schofield and Peter Worth (1967), Cambridge University Press
4. **Soil Mechanics and Foundations,** Muniram Budhu(4010), John Wiley & Sons, Inc.

Reference Books:

1. **Soil Mechanics, T.W. Lambe and R.V. Whitman**(1969). John Wiley & Sons,.
2. **Geotechnical Engineering-** Donald P Coduto Phi Learning Private Limited, New Delhi.

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING**[As per Choice Based Credit System (CBCS) scheme]****SEMESTER – II****Subject: Foundation Engineering in Difficult Ground**

Subject Code	18CGT243	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04**Course objectives:** This course will enable students to

- In-situ testing in difficult grounds.
- Design the foundations in earth movement conditions.
- Improve the ground conditions.

Modules	Teaching Hours
----------------	-----------------------

Module -1**Introduction:** Classification, swelling and shrinkage, sensitivity, settlement and bearing capacity of clays, fissures in clay, glacial deposits and difficult rocks.**Site Investigation in difficult ground:** Objectives, difficulties in determining the characteristics of the ground, remedial measures.**10 Hours****Module -2****In-situ testing and geophysical surveying:** Introduction, penetrometers, SPT, CPT, plate bearing tests, pressure meters, seismic surveying, resistivity surveying**Ground water and foundations:** Introduction, effective stress theory, oil tanks on poor ground, effect of raising the ground water level – reclaimed land, foundation on the sea bed.**10 Hours****Module -3****Foundations and earth movements:** Introduction, creep of rock masses, landslides, earthquake – primary and secondary effects, earthquake resistant design.**Design of foundations:** Introduction, general principles, strip and pad foundations, building on shrinkable soil, building on fill, raft foundation – variable soil and make up ground, pile foundation – choice, types; construction problems.**10 Hours****Module -4****Stability of slopes in difficult ground:** Introduction, mechanism of stability, strength of distorted clay, factor of safety, analysis, remedial measures**10 Hours****Module -5****Ground treatment:** Introduction, ground water lowering techniques, electro-osmosis and electro-chemical stabilization, thermal techniques, grouts and grouting, reinforcements, other stabilization techniques, dynamic consolidation, pre loading, vibroflotation, stone columns.**10 Hours****Course outcomes:**

During this course, students will be trained to:

- Develop the in-situ methods to evaluate the bearing capacity under different criteria.
- Analyse and design the grounds in shrinking areas.
- Overcome the construction problems by adopting suitable methods.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Foundation in difficult ground** – F G Bell, Butterworths & Co
2. **Foundation Analysis and design** – J E Bowles, Tata McGraw Hill

Reference Books:

1. Foundation Engineering – (4001) M J Tomlinson - PHI

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Environmental Geotechnical Engineering**

Subject Code	18CGT251	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Identify the contaminated soil and source contamination.
- Remedies for contaminated site.
- Study on Ground water contamination.
- Relation between contamination source and the soil & water.

Modules	Teaching Hours
----------------	-----------------------

Module -1**FUNDAMENTALS OF ENVIRONMENTAL GEOTECHNICAL ENGINEERING:**

Scope of environmental geotechnical engineering - multiphase behavior of soil – role of soil in geoenvironmental applications – importance of soil physics, soil chemistry, hydrogeology, biological process – sources and type of ground contamination – impact of ground contamination on geoenvironment - case histories on environmental geotechnical engineering problems.

10 Hours**Module -2****SOIL-WATER-CONTAMINANT INTERACTION:**

Soil mineralogy characterization and its significance in determining soil behavior – soil-water interaction and concepts of double layer – forces of interaction between soil particles, Concepts of unsaturated soil – importance of unsaturated soil in environmental geotechnical engineering problems - measurement of soil suction - water retention curves - water flow in saturated and unsaturated zone.

Soil-water-contaminant interactions and its implications – Factors effecting retention and transport of contaminants.

10 Hours**Module -3****WASTE CONTAINMENT SYSTEM:**

Evolution of waste containment facilities and disposal practices – Site selection based on environmental impact assessment –different role of soil in waste containment – different components of waste containment system and its stability issues – property evaluation for checking soil suitability for waste containment – design of waste containment facilities.

10 Hours**Module -4****CONTAMINANT SITE REMEDIATION:**

Site characterization – risk assessment of contaminated site - remediation methods for soil and groundwater – selection and planning of remediation methods – some examples of in-situ remediation.

10 Hours**Module -5****ADVANCED SOIL CHARACTERIZATION:**

Contaminant analysis - water content and permeability measurements – electrical and thermal property evaluation – use of GPR for site evaluation - introduction to geotechnical centrifuge modeling.

10 Hours**Course outcomes:**

During this course, students will be trained:

- To measure the amount of contamination in soils and water.

- To identify the source for contamination in soils and water.
- To know the interaction of soil, water and contaminants.
- Remedial measures for contaminated soils.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Geotechnical Practice for Waste Disposal** – Daniel D E, Chapman and Hall, London
2. **Hazardous Waste Management** – Lagrega M D, Buckingham P L, Evans J C, McGraw Hill Inc, Singapore.

Reference Books:

1. **Designing with Geosynthetics** - Koerner R M, Prentice Hall, New Jersey
2. **Proceedings of International Symposium on Environmental Geotechnology (1986)**

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Ground Water and Hydrology**

Subject Code	18CGT252	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- To understand the behaviour of the ground water and its percolation in soils.
- Determination of ground water movement.
- Recharging of ground water.

Modules	Teaching Hours
Module -1 Groundwater: Groundwater hydrologic cycle. Origin of groundwater, quality of groundwater, vertical distribution of groundwater-zone of aeration and zone of saturation; Geologic formations as aquifers; types of aquifers, porosity, specific yield, specific retention; Permeability, Darcy's law, storage coefficient, Transmissibility. .	10 Hours
Module -2 Groundwater flow: Groundwater flow in one, two and three- dimensions; Groundwater flow contours and their applications; Steady groundwater flow towards a well in confined and unconfined aquifers- Dupuits' and Theism's equations, Formation constants, yield of an open well, interference and well tests; Unsteady flow towards a well – Non-Equilibrium equations – Theis's solution- Jacob and Chow's simplifications, Leaky aquifers.	10 Hours
Module -3 Modelling and Analysis of Aquifer Systems: Need, model calibration, single and multi-cell models, Inverse problems, estimation of regional aquifer problems; aquifer management; linear and non-linear programming methods.	10 Hours
Module -4 Investigations: Surface methods of exploration - Electrical resistivity and seismic refraction methods. Subsurface methods; Geophysical logging and resistivity logging; hydrologic maps; groundwater balance; contamination.	10 Hours
Module -5 Artificial Recharge of Groundwater: Concept of artificial recharge and recharge methods, relative merits, Saline water intrusion, Ghyben-Hergberg relation, shape of interface, control of sea water intrusion.	10 Hours

Course outcomes:

During this course, students will be trained to:

- Estimate the percolation of ground water in different soils and understand seepage mechanism.
- Estimate of the contamination in soils from the field tests.
- Suitable design methodology for recharging of ground water.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Foundations of Theoretical Soil Mechanics**, Harr, M.E (1966) McGraw Hill,
2. **Foundation Engineering Handbook**, Winterkorn, H.F., and Fang, H.Y(4000) Galgotia,

Booksource, 4000

3. **Theoretical Soil Mechanics- Karl Terzaghi (1943), John Wiley & Sons.**
4. **Soil Mechanics and Foundations, Muniram Budhu(4007), John Wiley & Sons, Inc.**

Reference Books:

1. **Soil Mechanics, T.W. Lambe and R.V. Whitman(1969). John Wiley & Sons,.**
2. **Foundations and slopes- Attikinson (1981), McGraw Hill, New Delhi**
3. **Seepage, Drainage and Flownets – Cedergren H R(1997).-, John Wiley & Sons.**
4. **The Mechanics Basic concepts and Engineering Applications- Aysen A (4002), AA Balkema Publishers, 4002**

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Rock Mechanics**

Subject Code	18CGT253	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Identify the type of the rock.
- Analyze the rock quality designation and also evaluate its strength.
- Determine the methods of tunneling and mining.

Modules	Teaching Hours
Module -1 Classification of rocks, geological petro graphic and engineering. Index properties of rocks- porosity, density, permeability, durability and slake. Core recovery, RQD and its importance in engineering. Stress-strain behaviour, factors influencing the strength of rock, temperature, confining pressure, strain rates, modes of failures of rocks.	10 Hours
Module -2 Failure theories of rocks Mohr's hypothesis, Griffith's Criteria, Mullerl's extension of griffith's theory, elementary theory of crack propagation, failure of rock by crack propagation, effects of cracks of elastic properties. Testing of rocks: Laboratory and field test, assessment of in-situ strength.	10 Hours
Module -3 Rock Foundation: Shallow and deep investigation for foundation design and construction aspect, slope stability analysis, mode of failures in rock. Design of slopes, excavation in rock and stabilization concepts.	10 Hours
Module -4 Strengthening of rocks: Foundation treatment for dams and heavy structures by grouting and rock reinforcement. Methods and principles of grouting, principles of design of rock bolts.	10 Hours
Module -5 Tunnels – Basic terminology and application, site investigations, methods of excavation of tunnels supports and stabilization, construction control and maintenance, tunnel ventilation, control of ground water and gas. Underground Mining; mining methods, planning and design, mining equipments and mining procedures, cause for subsidence and its remedial measures.	10 Hours

Course outcomes:

During this course, students will be trained to:

- Identify the type of rock and to evaluate the bearing capacity of the rock.
- Design and analyze the foundations and improvement techniques for the foundations on insitu rocks.
- Design methodologies for mining and tunneling where rock is encountered.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:**1. Introduction to Rock Mechnaics – Goodman (1976), John Wiley and Sons, NY**

2. **Fundamentals of Rock Mechanics** – J C Jeager and N G W Cook (1976), Chapman and Hall, London
3. **Geotechnology** –Roberts , Pergamou Press ltd., Oxford

Reference Books:

1. **Principles of Engineering Geology and Geotechniques** – Krynine and Judd
2. **Rock Engineering** – Jhon A Franklin and Maurice b Dusseault, McGraw Hill
3. **Rock mechanics for Engineers:** Varma, B.P, Khanna Publishers
4. **Rock mechanics & Design of structures:** Obert, L & Duvall, W.I., John Wiley & Sons.

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II**Subject: Soil Structure Interaction**

Subject Code	18CGT254	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Make students understand soil structure.
- Understand stress-strain characteristics of soils.
- the mechanism of failure, the factors that affects the shear strength
- Structural behaviour with soils.

Modules	Teaching Hours
----------------	-----------------------

Module -1

Soil-Foundation Interaction: Introduction to soil-foundation interaction problems, Soil behavior, Foundation behavior, Interface behavior, Scope of soil foundation interaction analysis, soil response models, Winkler, Elastic continuum, Two parameter elastic models, Elastic plastic behavior, Time dependent behavior.

10 Hours**Module -2**

Beam on Elastic Foundation- Soil Models: Infinite beam, Two parameters, Isotropic elastic half space, Analysis of beams of finite length, Classification of finite beams in relation to their stiffness. Plate on Elastic Medium: Thin and thick plates, Analysis of finite plates, Numerical analysis of finite plates, simple solutions.

10 Hours**Module -3**

Plates on Elastic Continuum: Thin and thick rafts, Analysis of finite plates, Numerical analysis of finite plates.

10 Hours**Module -4**

Elastic Analysis of Pile: Elastic analysis of single pile, Theoretical solutions for settlement and load distributions, Analysis of pile group, Interaction analysis, Load distribution in groups with rigid cap.

10 Hours**Module -5**

Laterally Loaded Pile: Load deflection prediction for laterally loaded piles, Subgrade reaction and elastic analysis, Interaction analysis, Pile-raft system, Solutions through influence charts. An introduction to soil-foundation interaction under dynamic loads.

10 Hours**Course outcomes:**

During this course, students will be trained to:

- Analyse the behaviour of the soil under elastic and plastic condition.
- Predict the behaviour of the pile under static and dynamic loads.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Foundation analysis and design** - J E Bowles, McGraw Hill, NY
2. **Soil Mechanics in Engineering Practice** – Karl Terzaghi and R B Peck (1967), John Wiley and Sons, NY
3. **Analysis and Design of Foundations and Retaining Structures** –S Prakash(1979), Sarita

Reference Books:

1. **Soil Mechanics and Foundation Engineering** – S K Garg, Khanna Publications
2. **Geotechnical Engineering** – C Venkataramaiah, New Age International Publishers

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING**[As per Choice Based Credit System (CBCS) scheme]****SEMESTER – III****Subject: Unsaturated Soil Mechanics**

Subject Code	18CGT31	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04**Course objectives:** This course will enable students to

- Understand concept of shear stress and its importance.
- Know the behaviour hydraulic conductivity of the soil.
- Know the importance of soil-water interaction in applied soil engineering.

Modules	Teaching Hours
----------------	-----------------------

Module -1

Introduction to Unsaturated Soil Mechanics: Types of problems, typical profiles of unsaturated, tropical and residual soil, expansive and collapsing type of soils. Origin and formation, identification and classification of expansive and collapsing soils, Contractile skin.

Collapse and Heave: Collapse potential and swell potential, importance and their determination by different laboratory methods, Heave prediction based on oedometer tests, suction tests and empirical procedures, heave and collapse settlement.

10 Hours**Module -2**

Soil Suction: Matric and osmotic suction, total suction, theory of soil suction, measurement by direct and indirect methods – Tensiometers, Axis translation technique, Pressure plate apparatus, Filter paper method, Psychrometers, Squeezing technique of measuring osmotic suction.

Flow through unsaturated soils – flow laws, Darcy's law for unsaturated soils, coefficient of permeability with respect to water phase and air phase, air diffusion, measurement of permeability and air coefficient of permeability.

10 Hours**Module -3**

Phase properties and relations for unsaturated soils: Properties of individual phases, interaction of air and water, volume-mass relations, changes in volume-mass properties, densities of mixtures subjected to compression of the air phase, piston porous stone analogy, effective stress concepts and stress state variables for unsaturated soils, equilibrium analysis for unsaturated soils: total or overall equilibrium, independent phase equilibrium – water phase, air phase, contractile skin(meniscus).

10 Hours**Module -4**

Design alternatives for structures on expansive soils: Structural foundation alternatives, treatment of expansive soils – general considerations and guidelines, surcharge loading, prewetting, use of admixtures, electrochemical soil treatment, moisture control and soil stabilization, treatment alternatives for highways and airfield pavements.

10 Hours**Module -5**

Shear strength: History of shear strength, failure envelope for unsaturated soils, use of effective stress parameters to define shear strength, Mohr-coulomb and stress points envelopes, triaxial tests on unsaturated soils, CD tests, constant water content tests, CU tests with pore pressure measurements, undrained tests, multistage testing, measurement of shear strength parameters.

10 Hours**Course outcomes:**

During this course, students will be trained:

- To understand the concept of unsaturated soils and change in the behaviour of the soil properties

- To understand the contractual skin mechanism of partially saturate sols in the design of foundations by knowing the soil water interaction i.e., soil as a four phase system. Comparative study of basic properties in case of three and four phase system in soils
- To design the effective methods for foundations and structures

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Soil Mechanics for Unsaturated Soils** – DG Fredlund and H Rahardjo, Wiley Interscience Publication, John Wiley & Sons, NY
2. **Unsaturated Soil Mechanics** – Ning Lu and William J Likos, John Wiley & Sons, INC

Reference Books:

1. **Mechanics of Residual Soils** – G E Blight, A A Balkema Publishers, USA
2. **Expansive Soils – Problems & Practice in Foundations and Pavement Engineering** – John D Nelson and Debora J Miller, John Wiley & Sons, NY

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**Subject: Earth and Earth Retaining Structures**

Subject Code	18CGT321	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- To study the geostatic stresses, shear strength of soils.
- To study the static earth pressure for retaining walls, etc.

Modules	Teaching Hours
----------------	-----------------------

Module -1

Earth Pressure: Introduction, Rankine's theory and Coulomb's wedge theory, Numerical problems, Culmann's and Rebhann's graphical methods for determination of active and passive earth pressures, earth pressure calculations for line load and/or uniform strip load acting on the ground surface.

10 Hours**Module -2**

Retaining walls: Types of retaining walls, Failure of retaining walls by sliding, overturning and bearing. Stability and principles of the design of retaining walls – Gravity retaining walls, cantilever retaining walls, counterfort retaining walls, modes of failure of retaining walls, drainage from the backfill.

10 Hours**Module -3**

Bulk heads: Cantilever sheet pile walls - Types of sheet pile walls, free cantilever sheet pile, cantilever sheet pile in cohesion less soils and in clay.

Bulk heads: Anchored cantilever sheet pile walls - Anchored sheet pile with free earth support in cohesionless and cohesive soil. Bulk heads with fixed earth support method.

10 Hours**Module -4**

Braced cuts: Introduction, lateral earth pressure on sheeting, different types of sheeting and bracing systems, design of various components of bracings.

10 Hours**Module -5**

Coffer dams and Cellular coffer dams: Introduction, types of coffer dams, design of cellular coffer dams on rock by Tennes Valley Authority (TVA) method, safety against sliding, slipping, overturning, vertical shear and stability against bursting.

10 Hours**Course outcomes:**

During this course, students will be trained:

- To analyze the field problems and encountering various failures due to shear geostatic stress etc.
- To design and analyze the retaining structures for earth pressures.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

1. **Foundation analysis and design** - J E Bowles, McGraw Hill, NY
2. **Soil Mechanics in Engineering Practice** – Karl Terzaghi and R B Peck (1967), John Wiley and Sons, NY
3. **Analysis and Design of Foundations and Retaining Structures** –S Prakash(1979), Sarita Prakashana, Meerut

Reference Books:

1. **Soil Mechanics and Foundation Engineering** – S K Garg, Khanna Publications
2. **Geotechnical Engineering** – C Venkataramaiah, New Age International Publishers

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**Subject: Earthquake Resistant design of Foundations**

Subject Code	18CGT322	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Focused mainly on identifying the dynamic loading induced on the foundation.
- Understand soil - foundation interaction, analysis with reference to various design parameters that including liquefaction of soil due to earthquake.

Modules	Teaching Hours
Module -1	
BASIC DESIGN PARAMETERS: Dynamic properties of soils and its evaluation, strength and deformation characteristics of soils under earthquake loading, liquefaction hazard evaluations and remedial measures, geotechnical failure of foundations during earthquake, provision of IS 1893 and IS 13940.	10 Hours
Module -2	
Design requirements – bearing capacity theory under earthquake loading – bearing capacity analysis for liquefied soil – bearing capacity analysis for cohesive and cohesionless soils - seismic settlement of foundation.	10 Hours
Module -3	
Seismic design of Pile foundations: Earthquake loading – inertial and kinematic loading - performance of piles during earthquake loading – theories of pile failure in liquefiable soils – failure based on bending mechanism/buckling instability – methods of analysis – force based or limit equilibrium method – p-y method – pile settlement - guidelines for designing of piles under kinematic loading due to liquefaction – seismic design of well/cassion foundations.	10 Hours
Module -4	
Seismic design of retaining walls: Introduction – Seismic passive lateral earth pressure, behaviour of retaining wall during earthquakes, modification of Coulomb's Theory, Modified Culmann's Theory, displacement analysis, Indian standard code of practice.	10 Hours
Module -5	
Structural design of foundation: Introduction – loads acting on foundations during earthquake – fundamental failure mechanisms of foundations – essential criteria for design of foundations in liquefiable soils – structural design of foundations subjected to earthquake loading.	10 Hours

Course outcomes:

During this course, students will be trained to:

- Design of foundation under earthquake loading by considering the influence of various design parameters that includes the liquefaction of soils due to earthquake.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Design of foundation in seismic areas: Principles and some applications** by (4007).Bhattacharya S. (eds), Published by NICEE [National Centre for Earthquake Engineering (India)].

2. **Geotechnical Earthquake Engineering (4002):** Day R. W., handbook, McGraw – Hill, New York
3. **Design of Pile Foundations in Liquefiable Soils (4010)** Gopal Madabhushi, Jonathan Knappett and Stuart Haigh, Imperial College Press, London
4. **Basic geotechnical earthquake engineering by (4008)** Kamalesh Kumar, New Age International Publishers, New Delhi

Reference Books:

1. **Soil dynamics (1981)** Prakash, S., McGraw Hill, New York,.
2. **Geotechnical Earthquake Engineering (1996)**, Steven L. Kramer, Prentice Hall, New Delhi,.
3. **Foundation design and construction (1986)**, Tomlinson M.J., Longman Scientific & Technical, England,

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**FORENSIC GEOTECHNICAL ENGINEERING**

Subject Code	18CGT323	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Learning the soil properties for causing failures
- Identification of failure phenomenon
- New approach in the design aspects
- Improvisation of legal aspects in geotechnical engineering

Modules	Teaching Hours
----------------	-----------------------

Module -1**INTRODUCTION:**

Historical failures of geotechnical structures (finite and infinite slopes, high embankments such as earthen dams, tunnels, excavations, foundations-shallow and deep, retaining structures etc.), characterization of failures, Inadequateness of Limit state design, principles and advantages of Mobilizable strength design. Numerical problems.

10 Hours**Module -2**

TECHNICAL FORENSIC INVESTIGATION: Collection of data, problem characterization, development of failure hypotheses, a realistic back- analysis, field observations and performance monitoring, modelling of failure hypothesis and quality control of formal and technical aspects of the work. Numerical problems.

10 Hours**Module -3****GUIDELINES FOR FORENSIC INVESTIGATION OF GEOTECHNICAL CASES:**

Scope of the work, types of distress, diagnostic tests: field and laboratory tests, analysis, legal issues such as facts, interpretations, opinions, negligence

TECHNICAL ISSUES RELATED TO GEOTECHNICAL FAILURES: Primary shortcomings causing failures, shortcomings in design, inadequate site investigations, unforeseen occurrences and phenomena, shortcomings in construction; recommendations to limit future occurrence of failures.

10 Hours**Module -4****CASE HISTORIES:**

Construction of historic monuments, destruction due to environmental changes and survival of monuments among them, such as leaning tower of Pisa, Egyptian pyramids, tall structural foundations in Mexico city, pre historic caves in India etc.,

Consideration of geotechnical aspects such as settlement, shear strength, permeability, slope stability, etc., in construction of survived historic monuments as well as for the structures which have collapsed due to the new adjacent constructions or disturbances due to human activities etc.,. Numerical problems.

10 Hours**Module -5****GEOTECHNICAL ENGINEERING AND LEGAL SYSTEM:**

Legal conflict of geotechnical failures, sanctions in the legal code of construction, geotechnical work for documentation of forensic cases; case studies of legal conflict of prominent structures (such as landslides, deep excavations, unexpected settlements of oil tanks, distress in soil walls, failure due to slow creep of hills etc.)

10 Hours**Course outcomes:**

During this course, students will be trained:

- To predict the failure modes in geotechnical engineering before construction of structures.
- To design the structures to overcome the failure in geotechnical engineering by understanding the behaviour of soils.
- To frame the guidelines for avoiding the legal aspects of geotechnical failures by predicting and understanding the failure mechanism, their remedial measures before the construction of the foundations.

Text Books:

1. **Forensic Geotechnical and Foundation Engineering** – Robert W Day (4011)
2. **Forensic Geotechnical Engineering** – V V S Rao and G L Sivakumar Babu (4013), Springer India

Reference Books:

1. **Indo-US Forensic Practices: Investigation Techniques and Technology** – Shen En Chen, R Janardhanan, C Natarajan, Ryan Schmidt (4010), American Society of Civil Engineers

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**Optimization Techniques in Geotechnical Engineering**

Subject Code	18CGT324	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- The graduates are expected to adopt various numerical method and mathematical tools for analysis of research data.
- Learning the numerical methods in applied soil mechanics.
- Learning the bivariate data and Lagrangae's equation for the problems.
- Application of queuing theory.

Modules	Teaching Hours
Module -1 Recurrence Relation and Generating Functions : Formation of recurrence relation, Solution of linear and nonlinear recurrence relation, Properties of generating function and solve the recurrence relation using the generating function and related problems. Scatter Diagram; Karl Pearson's coefficient of linear correlation, Linear regression, Properties of regression and related problem.	10 Hours
Module -2 Numerical analysis: Introduction to interpolation, Newton's Forward and Backward interpolation(Statement only), Lagrange and Divided interpolation(Statement only), Simple problems. Numerical differentiation for equal and unequal interval. Matrix Eigen value and eigen vector by power methods, simple problems. Curve fitting and problems. Statistics: Analysis of Bivariate data. Correlation Analysis – Meaning of correlation.	10 Hours
Module -3 Optimisation Technique: Linear programming problem (LPP) Formation of LPP, Graphical Method and related problems. Transportation Problems, assignment problem., Queuing Theory- Basic Structure, Exponential distribution, Birth-and-Death Model,	10 Hours
Module -4 Tucker condition, Penalty function method, Augmented Lagrangian method, sequential unconstrained minimization, cutting plane method; Introduction to Evolutionary algorithms: Need for evolutionary algorithms, Type of evolutionary methods, Introduction to Genetic algorithm (GA), Difference and similarities between GA and traditional methods. Basic operations of GA: reproduction, crossover, mutation and elitism. Binary coded and Real coded GA	10 Hours
Module -5 Artificial Intelligence : Introduction- Classification of artificial intelligence-expert systems- artificial neural networks basic concepts-uses in functional approximation and optimization applications in the design and analysis, building construction. Fuzzy logic-basic concepts- problem formulation using fuzzy logic-applications	10 Hours

Course outcomes:

During this course, students will be trained to:

- Analyse the data obtained from the field
- Develop an appropriate methods to solve logically and optimize the test or field results

4. **Fuzzy logic implementation and applications(1996)**, Patyra, M.J. and Mlynek Wiley,.

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**Subject: Earth and Rock Fill Dams**

Subject Code	18CGT331	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Know the characteristics of the soil for design of earthen dam.
- Effect of pore pressure in earthen dams.
- Effect of fissures and folds of rock on foundation of earthen dam.

Modules	Teaching Hours
Module -1 Introduction: Necessity of Earth and Earth-rock fill dams, types, typical embankment dam sections. Site Selection and Exploration: Factors influencing location and alignment of the dam, foundation subsurface exploration and studies of embankment construction materials. Factors influencing Design: Availability of material for construction, character of foundation, climate, shape and size of valley, river diversion, probable wave action, time available for construction, function of the reservoir and earthquake activity.	10 Hours
Module -2 Design details: Material, location and inclination of earth core, shell materials and embankment side slopes, free board, crest width and camber. Filter zones, curving embankment for arch action and raising earth dams. Design provisions to control construction and draw down pore pressures. Berms, slope protections, internal drainage systems. Measurement of pore water pressure and movements: Purpose and types of instruments, piezometer, devices for measuring movements, USBR measurements of pore water pressure and embankment compression, compression of rock fill embankment sections, during construction and post construction foundation settlement, foundation spreading, observation and measurement of leakage.	10 Hours
Module -3 Stability analysis: Zones of planes of weakness in foundation, linear failure, plastic failure, composite failure, bearing capacity failure, stability analysis of embankment by Taylor's modified method suggested by Sherard et al., wedge method, stability analysis in three dimension, stability during construction, full reservoir and drawdown conditions. Special Design problems and details: Design considerations in earthquake, ground movements, earthquake intensity scales, periods and amplitudes of ground motion, influence of foundation material, earthquake waves, seiches, slope stability analysis during earthquake as per BIS, problems in loose sand, soft clay and silt foundation.	10 Hours
Module -4 Treatment of rock foundations and abutments: types of rock foundation, object of grouting, evaluation of necessity of grouting, planning grouting details, blanket grouting, drilling equipment, size and direction of holes, washing and pressure testing of holes, grouting equipment, procedures for grouting, pressure and consistency of grout, stopping surface leakage, surface treatment of rock foundation and abutments. Earth compaction against rock foundations and abutments, grouting through completed earthen embankments, drainage holes, grouting and drainage galleries. Earth dams on pervious soil foundations: Methods of foundation treatment, preventing under seepage with complete vertical barriers and grouting, reducing under seepage with	10 Hours

partial vertical cutoffs and horizontal upstream impervious blankets, controlling under seepage by regulation of leaks and relief wells.	
Module -5	
Embankment Construction: Equipment for excavating, hauling, spreading, blending, compacting and separating oversized rocks and cobbles, construction procedures and quality control of impervious and semi-pervious embankment sections, handling dry and wet materials, construction problems caused by fines, construction procedures of hard and soft rock fill embankments, field test on rock fill embankments, slope treatment and rip-rap.	10 Hours
<p>Course outcomes: During this course, students will be trained:</p> <ul style="list-style-type: none"> • To design the rock and earth fill dams. • To understand the mechanism of grouting and its application in rocks. • For analyzing the complex geotechnical problems for the design of earth and rock fill dams. 	
<p>Question paper pattern:</p> <ul style="list-style-type: none"> • The question paper will have ten questions. • Each full question consists of 20 marks. • There will be 2 full questions (with a maximum of four sub questions) from each module. • Each full question will have sub questions covering all the topics under a module. <p>The students will have to answer 5 full questions, selecting one full question from each module.</p>

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**Subject: Expansive Soil Engineering**

Subject Code	18CGT332	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03
CREDITS – 04			
Course objectives: This course will enable students to <ul style="list-style-type: none"> Identify the expansive soils. Understand the behaviour of such soils and to study the remedial measures for safety of structures. 			
Modules			Teaching Hours
Module -1 INTRODUCTION: Origin, distribution of expansive soils, recognition and identification of expansive soils – clay mineral, x-ray diffraction, DTA, electron microscopy, classification, free swell, shrinkage index, swelling potential and swelling pressure – methods of determination, factors influencing. HEAVE PREDICTION: Introduction, soil suction, measurement of soil suction – tensiometers, axis translation, filter paper method, psychrometers, osmotic method, heave prediction based on oedometer tests, based on soil suction tests.			10 Hours
Module -2 DESIGN ALTERNATIVES: Introduction, drilled pier and beam foundation, mat foundation, under-reamed pile foundation, general conditions for under reamed piles, design and construction. DESIGN FOR HIGHWAY AND AIR-FIELD PAVEMENTS: Introduction, general principles of pavement design, design features and treatment methods for expansive soil subgrades, air-field procedures.			10 Hours
Module -3 TREATMENT OF EXPANSIVE SOILS: Introduction, removal and replacement, remoulding and compaction, pre-loading, pre-wetting, stabilization – lime, cement, fly ash, application methods, moisture control, electro chemical treatments. REMEDIAL MEASURES: Introduction, remedial measures for buildings and pavements, case histories.			10 Hours
Module -4 METHODS OF CONSTRUCTION ON EXPANSIVE SOILS: Introduction, sub-base preparation, constructional and water – protection measures, maintenance and rehabilitation of structures founded on expansive soils.			10 Hours
Module -5 SWELL – SHRINK BEHAVIOUR OF EXPANSIVE SOILS: Introduction, investigation of foundation movements, cyclic behaviours, factors affecting cyclic behaviour, case histories.			10 Hours
Course outcomes: During this course, students will be trained to: <ul style="list-style-type: none"> Classify the heaving soils and to predict their swell and shrinkage behaviour. Provide proper remedy to the swelling soils. Design the appropriate foundation based on the swelling characteristics. 			
Question paper pattern: <ul style="list-style-type: none"> The question paper will have ten questions. 			

- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Foundations on Expansive Soil** - F H Chen, Elsevier Science Publishing Company, NY
2. **Construction of buildings on expansive soils** - E A Sorochan, Oxford & IBH Publications
3. **Expansive soils – Problems and practice in foundation and pavement engineering** – John D Nelson and Debora J Miller, John Wiley & Sons.

Reference Books:

1. **Soil Mechanics for Unsaturated Soils** – D J Fredlund and H Rahardjo, John Wiley & Sons

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**Subject: Offshore Geotechnical Engineering**

Subject Code	18CGT333	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Understand the type of soil strata available in offshore.
- Develop a structure under different environmental condition.
- Design the anchors in the sea.
- Design the pipelines and cable structures.

Modules	Teaching Hours
---------	----------------

Module -1

DESIGN OF OFFSHORE PLATFORMS: Introduction, fixed and floating platforms, case studies and general features, elements of hydrodynamics and wave theory, fluid structure interaction, steel concrete and hybrid platforms, Consolidation and shear strength characteristics of marine sediments.

10 Hours**Module -2**

Design Criteria: Environmental loading, wind, wave and current loads after installation, stability during towing.
Foundations: Site investigations, piled foundation, foundations for gravity structures, pile-supported structures.

10 Hours**Module -3**

Behaviour under dynamic loading, static and dynamic analysis of platforms and components.

10 Hours**Module -4**

Dynamic response in deterministic and indeterministic environment, codes of practice, analysis of fixed platform and semisubmersible related topics.

10 Hours**Module -5**

Anchor design, breakout resistance analysis and geotechnical aspects of offshore pipeline and cable design.

10 Hours**Course outcomes:**

During this course, students will be trained to:

- Design the structure for wind, wave loads and dynamic loads.
- Design the structure for overturning.
- Design the pipeline and cable structures.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Offshore Geotechnical Engineering** – Mark Radolph and Susan Gourvenec, CRC Press.
2. **Construction of Marine and Offshore Structures** – Ben C Gerwick, CRC Press.
3. **Offshore Geotechnical Engineering** – ETR Dean

Reference Books:

1. **Frontiers in Offshore Geotechnics II** – Susan Gourvenec and David White, CRC Press.

2. **Frontiers in Offshore Geotechnics II** – Vaughan Meyer, CRC Press
3. **Geotechnical Aspects of Coastal and Offshore Structures: Proceedings of the Symposium, Bangkok** – A S Balasubramaniam, CRC Press

SYLLABUS FOR M.Tech., GEOTECHNICAL ENGINEERING

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III**Subject: Reinforced Soil Structures**

Subject Code	18CGT334	IA Marks	40
Number of Lecture Hours/Week	04	Exam Marks	60
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

Course objectives: This course will enable students to

- Identify the soil suitable for reinforced earth.
- Identify the type of reinforcing material suitable for the project.
- Design the reinforced earth.

Modules	Teaching Hours
Module -1 Historical background: Introduction to reinforced soil structures, comparison with reinforced cement concrete structures. Reinforced Earth: Principles, concepts and Mechanisms of reinforced earth	10 Hours
Module -2 Materials used, properties, laboratory testing and constructional details, metallic strips, metallic grids, geotextiles, geogrids, geomembranes and geocomposites, their functions and design principles	10 Hours
Module -3 Geotextiles: Introduction, design methods, function and mechanism, geotextile properties and test methods – physical, mechanical and hydraulic properties, construction methods and techniques using geotextiles	10 Hours
Module -4 Design applications of reinforced soil structures in pavements, embankments, slopes, retaining walls and foundations, reinforced soil structures for soil erosion control problems, geosynthetic clay liners	10 Hours
Module -5 Case studies of reinforced soil structures, discussion on current literature and design problems	10 Hours

Course outcomes:

During this course, students will be trained to:

- Design and incorporate the reinforced earth for the sites at weak soil sites
- Design the pavements, embankments using reinforced earth to enhance the engineering properties of the soils

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. **Designing with Geosynthetics** – Koerner R H (1994), Prentice Hall Inc.
2. **Reinforcements and Soil Structures** – Jones, CJEP (1996), Butterworth Publications
3. **Membranes in ground engineering** – Rankilor, P R (1985), John Wiley & Sons.
