

<b>Artificial Intelligence</b>			
Course Code	MCS101	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:2	SEE Marks	50
Total Hours of Pedagogy	50	Total Marks	100
Credits	03	Exam Hours	03
<b>Course Learning Objectives:</b>			
<ul style="list-style-type: none"> <li>● Define the foundational concepts of artificial intelligence and key problem-solving techniques.</li> <li>● Explain the knowledge representation and reasoning techniques to solve complex problems in AI systems.</li> <li>● Use machine learning algorithms to evaluate their performance in real-world applications.</li> <li>● Build the applications of natural language processing and robotics to enhance human-computer interaction.</li> <li>● Explore the ethical considerations and societal implications of AI technologies.</li> </ul>			
<b>Module-1</b>			
<b>Module 1: Introduction to Artificial Intelligence and Problem Solving</b> , Definition and scope of AI, History and evolution of AI, Types of AI: Narrow AI vs. General AI, Problem formulation and problem-solving techniques, Search algorithms: Uninformed and informed search strategies, Heuristic search and constraint satisfaction problems.			
<b>Teaching Learning Process</b>	Chalk and talk/PPT/case study/web content		
<b>Module-2</b>			
<b>Module 2: Knowledge Representation and Reasoning</b> , Types of knowledge representation, Propositional logic and first-order logic, Semantic networks and frames, Ontologies and their applications, Deductive and inductive reasoning, Rule-based systems and non-monotonic reasoning, Probabilistic reasoning and Bayesian networks.			
<b>Teaching-Learning Process</b>	Chalk and talk/PPT/case study/web content		
<b>Module-3</b>			
<b>Module 3: Machine Learning</b> , Introduction to machine learning, Supervised, unsupervised, and reinforcement learning, Common algorithms: Decision trees, SVM, neural networks Evaluation metrics for machine learning models, Practical applications of machine learning in AI systems.			
<b>Teaching Learning Process</b>	Chalk and talk/PPT/case study/web content		
<b>Module-4</b>			
<b>Module 4: Natural Language Processing and Robotics</b> , Basics of natural language processing (NLP), Text processing and language models, Sentiment analysis and language generation, Robotics fundamentals and sensor technologies, Robot kinematics, control, and applications of AI in robotics.			
<b>Teaching Learning Process</b>	Chalk and talk/PPT/case study/web content		
<b>Module-5</b>			
<b>Module 5: Ethical and Societal Implications of AI</b> , Ethical considerations in AI development, AI and job displacement, Privacy concerns and data security, Bias and fairness in AI algorithms, Accountability and transparency in AI systems, The role of government and regulation in AI, Public perception and trust in AI technologies, Future of AI and its impact on society.			
<b>Teaching-Learning Process</b>	Chalk and talk/PPT/case study/web content		

**Assessment Details (both CIE and SEE)**

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

**Continuous Internal Evaluation:**

1. Three Unit Tests each of **20 Marks**
2. Two assignments each of **20 Marks** or **one Skill Development Activity of 40 marks**

to attain the COs and POs

The sum of three tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

**CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the Outcome defined for the course.**

**Semester End Examination:**

1. The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
2. The question paper will have ten full questions carrying equal marks.
3. Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
4. Each full question will have a sub-question covering all the topics under a module.
5. The students will have to answer five full questions, selecting one full question from each module.

**Suggested Learning Resources:****Text Books:**

1. "Artificial Intelligence: A Modern Approach" by Stuart Russell and Peter Norvig, 4th Edition (2021)
2. "Deep Learning" by Ian Goodfellow, Yoshua Bengio, and Aaron Courville third Edition.

**Reference Books:**

1. "Pattern Recognition and Machine Learning" by Christopher M. Bishop Edition: fourth Edition (2020)
- "Artificial Intelligence: Foundations of Computational Agents" by David L. Poole and Alan K. Mackworth Edition: third Edition (2021).

**Web links and Video Lectures (e-Resources):**

- <https://www.youtube.com/playlist?list=PLD6B6F0A3B1D4D3D8A7E3C5E8A7B2E0C>

**Skill Development Activities Suggested**

- The students with the help of the course teacher can take up relevant technical –activities which will enhance their skill. The prepared report shall be evaluated for CIE marks.

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

Sl. No.	Description	Blooms Level
CO1	Explain the foundational concepts of artificial intelligence, including its history, types, and key problem-solving techniques.	L2
CO2	Apply knowledge representation and reasoning techniques to solve complex problems in AI systems.	L3
CO3	Implement machine learning algorithms and evaluate their performance in real-world applications.	L2
CO4	Explore the principles and applications of natural language processing and robotics to enhance human-computer interaction.	L4

Teaching Hours/Week (L:P:SDA)	2:0:2	SEE Marks	50
Total Hours of Pedagogy	50	Total Marks	100
Credits	03	Exam Hours	03

**Course Learning Objectives:**

- To reduce development time and the resources required to maintain existing applications.
- To increase code reuse and provide a competitive advantage through effective use of data structures and algorithms.

**Module-1**

Search Trees: Two Models of Search Trees. General Properties and Transformations. Height of a Search Tree. Basic Find, Insert, and Delete. Returning from Leaf to Root. Dealing with Non unique Keys. Queries for the Keys in an Interval. Building Optimal Search Trees. Converting Trees into Lists. Removing a Tree. Balanced Search Trees: Height-Balanced Trees. Weight-Balanced Trees. (a, b)- And B-Trees. Red-Black Trees and Trees of Almost Optimal Height. Top-Down Rebalancing for Red-Black Trees.

<b>Teaching Learning Process</b>	Chalk and talk/PPT/web content
<b>Module-2</b>	
Tree Structures for Sets of Intervals. Interval Trees. Segment Trees. Trees for the Union of Intervals. Trees for Sums of Weighted Interval. Trees for Interval-Restricted Maximum Sum Queries. Orthogonal Range Trees. Higher-Dimensional Segment Trees. Other Systems of Building Blocks. Range-Counting and the Semigroup Model. Kd-Trees and Related Structures.	
<b>Teaching-Learning Process</b>	Chalk and talk/PPT/case study/web content
<b>Module-3</b>	
Heaps: Balanced Search Trees as Heaps. Array-Based Heaps. Heap-Ordered Trees and Half Ordered Trees. Leftist Heaps. Skew Heaps. Binomial Heaps. Changing Keys in Heaps. Fibonacci Heaps. Heaps of Optimal Complexity. Double-Ended Heap Structures and Multidimensional Heaps. Heap-Related Structures with Constant-Time Updates.	
<b>Teaching Learning Process</b>	Chalk and talk/PPT/case study/web content
<b>Module-4</b>	
Graph Algorithms: Bellman - Ford Algorithm; Single source shortest paths in a DAG; Johnson's Algorithm for sparse graphs; Flow networks and Ford-Fulkerson method; Maximum bipartite matching. Polynomials and the FFT: Representation of polynomials; The DFT and FFT; Efficient implementation of FFT.	
<b>Teaching Learning Process</b>	Chalk and talk/PPT/case study/web content
<b>Module-5</b>	
String-Matching Algorithms: Naïve string Matching; Rabin - Karp algorithm; String matching with finite automata; Knuth-Morris-Pratt algorithm; Boyer – Moore algorithms.	
<b>Teaching-Learning Process</b>	Chalk and talk/PPT/case study/web content

## Forensics Computing

Course Code	MCS105E	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03

- To understand the fundamentals of Android and mobile forensics, including the Android platform architecture and open-source software.
- To analyze core components of Android hardware platforms and differentiate between various device types.
- To demonstrate proficiency in using the Android SDK and ADB for forensic analysis while understanding the Android security model.
- To evaluate Android file systems and apply forensic techniques for handling devices and imaging methods.

### Module-1

Android and mobile forensics: Introduction, Android platform, Linux, Open source software and forensics, Android Open Source Project, Internationalization, Android Market, Android forensics

<b>Teaching-Learning Process</b>	<b>Chalk and talk/PowerPoint presentation.</b>
----------------------------------	--

### Module-2

Android hardware platforms: Overview of core components, Overview of different device types, Readonly memory and boot loaders, Manufacturers, Specific devices

<b>Teaching-Learning Process</b>	<b>Chalk and talk/PowerPoint presentation.</b>
----------------------------------	--

### Module-3

Android software development kit and android debug bridge: Android platforms, Software development kit (SDK), Android security model, Forensics and the SDK.

<b>Teaching-Learning Process</b>	<b>Chalk and talk/PowerPoint presentation.</b>
----------------------------------	--

### Module-4

Android file systems and data structures: Data in the shell, Type of memory, File systems, Mounted file systems and directory structures. Android forensic techniques: Procedures for handling an Android device, Imaging Android USB mass storage devices, Logical techniques, Physical techniques

<b>Teaching-Learning Process</b>	<b>Chalk and talk/PowerPoint presentation.</b>
----------------------------------	--

### Module-5

Android device data and app security: Data theft targets and attack vectors, Security considerations, Individual security strategies, Corporate security strategies, App development security strategies. Android application and forensic analysis: Analysis techniques, FAT forensic analysis, YAFFS2 forensic analysis, Android app analysis

<b>Teaching-Learning Process</b>	<b>Chalk and talk/PowerPoint presentation.</b>
----------------------------------	--

**Course outcome (Course Skill Set)**

At the end of the course the student will be able to :

Si No	Description	Blooms level
CO1	To understand the fundamentals of Android and mobile forensics, including the Android platform architecture and open-source software.	L2
CO2	To analyze core components of Android hardware platforms and differentiate between various device types.	L3
CO3	To demonstrate proficiency in using the Android SDK and ADB for forensic analysis while understanding the Android security model.	L3
CO4	To evaluate Android file systems and apply forensic techniques for handling devices and imaging methods.	L3

<b>Number of Contact Hours/Week</b>	0:0:2	<b>SEE Marks</b>	60
<b>Total Number of Lab Contact Hours</b>	36	<b>Exam Hours</b>	03
<b>Credits – 2</b>			
<b>Course Learning Objectives:</b> This course MCSL106 will enable students to:			
<ul style="list-style-type: none"> <li>● Implement and evaluate Algorithm and AI in Python programming language.</li> </ul>			
<b>Descriptions (if any):</b>			
<b>Installation procedure of the required software must be demonstrated, carried out in groups, and documented in the journal.</b>			
<b>Programs List:</b>			
1.	Implement a simple linear regression algorithm to predict a continuous target variable based on a given dataset.		
2.	Develop a program to implement a Support Vector Machine for binary classification. Use a sample dataset and visualize the decision boundary.		
3.	Develop a simple case-based reasoning system that stores instances of past cases. Implement a retrieval method to find the most similar cases and make predictions based on them.		
4.	Write a program to demonstrate the ID3 decision tree algorithm using an appropriate dataset for classification.		
5.	Build an Artificial Neural Network by implementing the Backpropagation algorithm and test it with suitable datasets.		
6.	Implement a KNN algorithm for regression tasks instead of classification. Use a small dataset, and predict continuous values based on the average of the nearest neighbors.		
7.	Create a program that calculates different distance metrics (Euclidean and Manhattan) between two points in a dataset. Allow the user to input two points and display the calculated distances.		
8.	Implement the k-Nearest Neighbor algorithm to classify the Iris dataset, printing both correct and incorrect predictions.		
9.	Develop a program to implement the non-parametric Locally Weighted Regression algorithm, fitting data points and visualizing results.		
10.	Implement a Q-learning algorithm to navigate a simple grid environment, defining the reward structure and analyzing agent performance.		
<b>Laboratory Outcomes:</b> The student should be able to:			
<ul style="list-style-type: none"> <li>● Implement and demonstrate AI algorithms.</li> <li>● Evaluate different algorithms.</li> </ul>			
<b>Conduct of Practical Examination:</b>			

- Experiment distribution.
  - For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
  - For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (*Courseed to change in accordance with university regulations*)
  - q) For laboratories having only one part – Procedure + Execution + Viva-Voce:  $15+70+15 = 100$  Marks
  - r) For laboratories having PART A and PART B
    - i. Part A – Procedure + Execution + Viva =  $6 + 28 + 6 = 40$  Marks
    - ii. Part B – Procedure + Execution + Viva =  $9 + 42 + 9 = 60$  Marks
