

ADVANCED FINITE ELEMENT METHODS AND APPLICATIONS			
Course Code	MMMD/MMDE201	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	03:02:00	SEE Marks	50
Total Hours of Pedagogy	40 hours Theory + 10-12 Lab slots	Total Marks	100
Credits	04	Exam Hours	03
Course objectives:			
<ol style="list-style-type: none"> 1. Introduce basic aspects of finite element technology, including domain discretization, polynomial interpolation, application of boundary conditions, assembly of global arrays, and solution of the resulting algebraic systems. 2. Discuss the use of finite element methods in engineering problem-solving drawing from applications in solid mechanics and other engineering Domains. 3. Familiarize students with professional-level finite element software. 4. To define, derive and assemble stiffness matrices for spring element, truss element, beam elements, Plane Stress element. 5. To be familiar with the idea of Isoparametric formulation for various FE Elements 6. FE Formulation of Axisymmetric and Solid Elements. 			
MODULE-1 (8 Hours)			
Mathematical Preliminaries: Principle of Virtual Work, General steps of the Finite Element Method.			
Introduction to the Stiffness (Displacement) Method: Definition of the Stiffness Matrix, Derivation of the Stiffness Matrix for a Spring Element, Example of a Spring Assemblage, Assembling the total Stiffness Matrix by Superposition Method, Boundary Conditions, Potential Energy Approach to Derive Spring Element Equations.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2 (8 Hours)			
Development of Truss Equations: Derivation of the Stiffness Matrix for a Bar Element in Local Coordinates, Selecting a Displacement Function, Transformation of vectors in Two Dimensions, Global Stiffness Matrix for Bar Arbitrarily Oriented in the Plane, Computation of Stress for a Bar in the x – y Plane, Solution of a Plane Truss, Transformation Matrix and Stiffness Matrix for a Bar in three-Dimensional space, Inclined Supports, Potential Energy Approach to Derive Bar Element Equations, Galerkin’s Residual Method and its Use to Derive the One-Dimensional Bar Element Equations.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3 (8 Hours)			
Development of Beam Equations: Beam stiffness, Example of Assemblage of Beam Stiffness Matrices, Examples of Beam analysis Using the Direct stiffness Method, Distributed Loading, Beam Element with Nodal Hinge, Potential Energy Approach to Derive Beam Element Equations, Galerkin’s Method for Deriving Beam Element Equations.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4 (8 Hours)			
Development of the Plane Stress and Plane Strain Stiffness Equations: Basic Concepts of Plane Stress and Plane Strain, Derivation of the Constant-Strain triangular Element Stiffness Matrix and Equations, Treatment of body and Surface Forces, Explicit Expression for the Constant-Strain Triangle Stiffness Matrix, Finite Element Solution of a Plane Stress Problem, Rectangular Plane Element (bilinear rectangle, Q4).			
Development of the Linear Strain Triangle Equations: Derivation of the Linear-Strain Triangular Element Stiffness Matrix and Equations, Example LST Stiffness Determination, Comparison of Elements.			

Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,
MODULE-5 (8 Hours)	
Isoparametric Formulation: Isoparametric Formulation of the Bar Element Stiffness Matrix, Isoparametric Formulation of the plane Quadrilateral (Q4) Element Stiffness Matrix, Newton-Cotes and Gaussian Quadrature, Evaluation of the Stiffness Matrix and Stress Matrix by Gaussian Quadrature, Higher-Order Shape Functions (including Q6, Q8,Q9, and Q12 Elements without stiffness matrix derivation)	
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,

Sl.NO.	Experiments
1	Solve (with MATLAB), the ODE using the weak formulation (FEM/MATLAB): $a \frac{d^2u}{dx^2} + b \frac{du}{dx} + cu = f(x)$, $0 < x < L$ with Boundary Conditions: $u(0) = 0$ and $u(L) = 0$ take $a=1$, $b=-3$, $c=2$ and $f(x)=1$. Take domain size as 1 (i.e. $L=1$) and take Five linear elements of equal size.
2	Solve (with MATLAB), the ODE using the weak formulation (FEM/MATLAB): $a \frac{d^2u}{dx^2} + b \frac{du}{dx} + cu = f(x)$, $0 < x < L$ with Boundary Conditions: $u(0) = 0$ and $\frac{du}{dx}(1) = 0$ take $a=1$, $b=-3$, $c=2$ and $f(x)=1$. Take domain size as 1 (i.e. $L=1$) and take Five linear elements of equal size.
3	Solve using MATLAB, the Laplace equation representing two dimensional steady-state problems using both linear triangle elements with the given boundary conditions: $\frac{\partial^2 u}{\partial x^2} + \frac{\partial^2 u}{\partial y^2} = 0 \text{ for } 0 < x < 5 \text{ and } 0 < y < 10.$ The boundary conditions are $u(x, 0) = 0$ for $0 < x < 5$, $u(0, y) = 0$ for $0 < y < 10$, $u(x, 10) = 100 \sin(\pi x / 10)$ for $0 < x < 5$, and $\frac{\partial u(x, y)}{\partial x} = 0$ for $0 < y < 10$.
4	Solve the problem 3 using the bilinear rectangular elements with other conditions remaining same.
5	Write a MATLAB program to Use Gauss-Legendre quadrature for integration of $f(x, y) = 1 + 4xy - 3x^2y^2 + x^4y^6$ over the domain $-1 < x < 1$ and $-1 < y < 1$. Use 3-point quadrature rule along the x-axis and 4-point quadrature rule along y-axis.
6	Determine the natural frequency of a free bar (Fixed at one end and free at other) using the finite element method. The bar has Young's Modulus of 200 GPa, Cross-sectional area of 0.001 m ² , Density of 7860 Kg/m ³ and Length of 4 m.
7	Write a MATLAB program to perform stress analysis of a cantilever beam subjected to end load using two dimensional Isoparametric elements assuming plane stress condition. Model the beam using ten four-node quadrilateral elements.
8	Write a generalised MATLAB Code that can solve any two dimensional truss structure to find member forces.
9	Make a report of available 1D, 2D and 3D Elements in a commercial FE Software.
10	Make a report of the practical aspects to be considered while generating a mesh in commercial software.
Demonstration Experiments	
11	Solve a problem of a Cantilever beam subjected to end point load in a commercial software to find out its displacements and stresses
12	Write a script in commercial software to automate the above problem for various dimensions and material properties.
Assessment Details (both CIE and SEE)	
The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each	

subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

CIE for the theory component of IPCC

- Two Tests each of **25 Marks**
- Two assignments each of **25 Marks/One Skill Development Activity of 50 marks**
- Total Marks of two tests and two assignments/one Skill Development Activity added will be CIE for 60 marks, marks scored will be proportionally scaled down to **30 marks**.

CIE for the practical component of IPCC

- On completion of every experiment/program in the laboratory, the students shall be evaluated and marks shall be awarded on the same day. The **15 marks** are for conducting the experiment and preparation of the laboratory record, the other **05 marks shall be for the test** conducted at the end of the semester.
- The CIE marks awarded in the case of the Practical component shall be based on the continuous evaluation of the laboratory report. Each experiment report can be evaluated for **10 marks**. Marks of all experiments' write-ups are added and scaled down to **15 marks**.
- The laboratory test at the end /after completion of all the experiments shall be conducted for **50 marks** and scaled down to **05 marks**.

Scaled-down marks of write-up evaluations and tests added will be CIE marks for the laboratory component of IPCC for **20 marks**.

SEE for IPCC

Theory SEE will be conducted by the University as per the scheduled timetable, with common question papers for the course (duration 03 hours)

- The question paper will be set for 100 marks and marks scored will be scaled down proportionately to 50 marks.
- The question paper will have ten questions. Each question is set for 20 marks.
- There will be 2 questions from each module. Each of the two questions under a module (with a maximum of 3 sub-questions), **should have a mix of topics** under that module.
- The students have to answer 5 full questions, selecting one full question from each module.

The theory portion of the IPCC shall be for both CIE and SEE, whereas the practical portion will have a CIE component only. Questions mentioned in the SEE paper shall include questions from the practical component).

- The minimum marks to be secured in CIE to appear for SEE shall be the 15 (50% of maximum marks-30) in the theory component and 10 (50% of maximum marks -20) in the practical component. The laboratory component of the IPCC shall be for CIE only. However, in SEE, the questions from the laboratory component shall be included. The maximum of 04/05 questions to be set from the practical component of IPCC, the total marks of all questions should not be more than the 20 marks.

conducted for 100 marks and students shall secure 40% of the maximum marks to qualify in the SEE. Marks secured will be scaled down to 50. (Student has to secure an aggregate of 50% of maximum marks of the course (CIE+SEE))

Suggested Learning Resources:

Books

1. Daryl L. Logan, "A First Course in the Finite Element Method", 6th Edition, Cengage Learning, 2017.
2. Jacob Fish and Ted Belytschko, "A First Course in Finite Elements", John Wiley & Sons, 2007
3. J. N. Reddy, "An Introduction to the Finite Element Method", 3rd Edition, Mc-Graw Hill, 2006
4. Ferreira, Antonio & Fantuzzi, Nicholas., "MATLAB Codes for Finite Element Analysis: Solids and Structures", Springer, 2009.

Web links and Video Lectures (e-Resources):

1. NOC: Finite Element Method: Variational Methods to Computer Programming, IIT Guwahati (<https://nptel.ac.in/courses/112103295>)
2. NOC:Basics of Finite Element Analysis - II, IIT Kanpur (<https://nptel.ac.in/courses/112104205>)
3. AbaqusFEA Tutorial Videos (<https://www.youtube.com/user/AbaqusPython>)

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

1. Write MATLAB/ SCILAB programs to Analyse the 1D, 2D, and 3D Finite Elements.
2. Practice the Modelling, Meshing, and Analysis of simple structures in commercial software and compare the results with closed form solutions.
3. Take an open source FE Software, Compile, and generate an executable file.
4. Understand and summarise the format of the input ASCII files generated by commercial meshing software for any well know FE Solver.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Understand the Basis of formulation of Finite Element Methods	2
CO2	Formulate the complete FE Formulation for 1D, 2D, and 3D Elements	3
CO3	Evaluate various boundary conditions in the FE Application	5
CO4	Write a small computer program to analyse a simple Truss structure	6

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/ investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Mapping of COs and POs

	PO1	PO2	PO3	PO4	PO5
CO1	3	1	1	3	3
CO2	3	2	1	3	3
CO3	3	3	1	3	2
CO4	1	3	1	1	1

Note : High - 1, Medium – 2, and Low – 3

Modern Vibration Theory and Application			
Course Code	MMMD/MMDE202	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
<ol style="list-style-type: none"> 1. To study the basic concepts of vibration. 2. To characterize the free and forced vibrations of damped and undamped single degree of freedom systems. 3. To understand the transient vibration response of a single degree of freedom system. 4. To study various vibration measuring instruments. 5. To study and characterize the random vibrations. 6. To characterize the continuous systems. 7. To study the basic principles of maintenance and condition monitoring. 			
MODULE-1			
"Introduction to vibrations, Importance of studying vibrations, Types of vibrations: Free and Forced, Damped and Undamped, Basic concepts: Periodic motion, Harmonic motion, Frequency, Amplitude, Phase, Free vibration of Single Degree of Freedom (SDOF) systems, Damping concepts: Light damping, Critical damping"			
Teaching-Learning Process	Power-point Presentation, Video demonstration or Simulations, Chalk and Talk are used for Problem Solving, Laboratory Demonstrations and Practical Experiments		
MODULE-2			
"Forced vibrations with harmonic excitation, Resonance concept and simple examples, Quality factor (Q-factor), Bandwidth, Vibration Isolation: Basic principles, Vibration measuring devices: basic operation"			
Teaching-Learning Process	Power-point Presentation, Video demonstration or Simulations, Chalk and Talk are used for Problem Solving, Laboratory Demonstrations and Practical Experiments		
MODULE-3			
"Introduction to Two Degree of Freedom (2DOF) systems, Coupled oscillations, Natural frequencies and mode shapes (conceptual level), Basic ideas about Multi-Degree of Freedom (MDOF) systems, Simple modal analysis, Importance of modes in practical systems"			
Teaching-Learning Process	Power-point Presentation, Video demonstration or Simulations, Chalk and Talk are used for Problem Solving, Laboratory Demonstrations and Practical Experiments		
MODULE-4			
Introduction: Transverse Vibration of a String or Equation of Motion, Initial and Boundary Conditions, Free Vibration of a Uniform String, Free Vibration of a String with Both Ends Fixed, Traveling-Wave Solution.			
Longitudinal Vibration of a Bar or Rod: Equation of Motion and Solution, Orthogonality of Normal Functions.			
Torsional Vibration of a Shaft or Rod, Lateral Vibration of Beams : Equation of Motion, Initial Conditions, Free Vibration, Boundary Conditions.			
Teaching-Learning Process	Power-point Presentation, Video demonstration or Simulations, Chalk and Talk are used for Problem Solving, Laboratory Demonstrations and Practical Experiments		

MODULE-5

Introduction, Transducers: Variable Resistance Transducers, Piezoelectric Transducers, Electrodynamic Transducers, Linear Variable Differential Transformer Transducer.

Vibration Pickups: Vibrometer, Accelerometer, Velometer, Phase Distortion. **Frequency-Measuring Instruments:** Mechanical Exciters, Electrodynamic Shaker, **Signal Analysis:** Spectrum Analyzers, Bandpass Filter, Constant-Percent Bandwidth and Constant-Bandwidth Analyzers. **Dynamic Testing of Machines and Structures:** Using Operational Deflection-Shape Measurements, Using Modal Testing,

Teaching-Learning Process	Power-point Presentation, Video demonstration or Simulations, Chalk and Talk are used for Problem Solving, Laboratory Demonstrations and Practical Experiments
---------------------------	--

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

1. Two Unit Tests each of **25 Marks**
2. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module
-

Suggested Learning Resources:

Books

- "William T. Thomson and Marie Dillon Dahleh, Theory of Vibration with Applications, Pearson Education"
- "Singiresu S. Rao, Mechanical Vibrations, Pearson Education"
- "Leonard Meirovitch, Fundamentals of Vibrations, McGraw-Hill"
- "Daniel J. Inman, Engineering Vibration, Pearson Education"
- "S. Timoshenko, Vibration Problems in Engineering, Wiley"

References:

- "S. Graham Kelly, Fundamentals of Mechanical Vibrations, McGraw-Hill"
- "Anil Rao, Mechanical Vibrations and Noise Engineering, Pearson"
- "Clive D. Rodgers, Modal Testing: Theory, Practice, and Application, Wiley"

Web links and Video Lectures (e-Resources):

Skill Development Activities Suggested

1. Write MATLAB/ SCILAB programs to simulate the response of single degree of freedom systems under free and forced vibrations.
2. To create mathematical models of single degree of freedom systems in MATLAB Simulink / SCILAB.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Understand the basics of vibrations and determine the equations of motion for free & forced vibrations of single degree of freedom systems and to find their solution	3
CO2	Determine the response of a single degree of freedom system subjected to various types of input forces.	4
CO3	Apply fundamentals of vibrations to its measurement and analysis	6
CO4	Determine the equations of motion for continuous system and to find their solutions.	3
CO5	Understand the basic concepts of maintenance and to apply these concepts for condition monitoring of machines	4

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research /investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Mapping of COS and POs

	PO1	PO2	PO3	PO4	PO5
CO1	3	3	1	3	2
CO2	3	3	1	2	1
CO3	3	3	1	3	2
CO4	2	3	1	3	1
CO5	1	3	1	2	2

Note : High - 1, Medium - 2, and Low - 3

ADVANCED MACHINE DESIGN			
Course Code	MMMD/MMDE203	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	03:00:00	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
The students will be able to:			
<ol style="list-style-type: none"> 1. Outline the basic philosophy of machine design 2. Compute the required load under various practical conditions 3. Apply the various static load based theories of failures 4. Apply the various fatigue load based theories of failures 			
MODULE-1			
Introduction to Mechanical Engineering Design: Design and Mechanical Engineering Design, Phases and Interactions of the Design Process, Design Tools and Resources, The Design Engineer's Professional Responsibilities, Standards and Codes, Stress and Strength, Design Factor and Factor of Safety, Reliability, Dimensions and Tolerances, Calculations and Significant Figures.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2			
Load Determination: Loading Classes, FBDs, Load Analysis, 2D Static Loading Case Studies, 3D Static Loading Case Studies, Impact Loading, Beam Loading.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3			
Stress and Strain: Stress, Strain, Principal Stress, Plane Stress and Plane Strain, Mohr's Circle, Applied Versus Principal Stresses, Axial Tension, Direct Shear Stress, Bearing Stress and Tearout,			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4			
Deflection: Beams and Bending Stresses, Deflection in Beams, Torsion, Combined Stresses, Spring Rates, Stress Concentration, Stresses in Cylinders, Case Studies In Static Stress And Deflection Analysis.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5			
Static Failure Theories: Failure of Ductile Materials, Failure of Brittle Materials, Case Studies: Bicycle Brake Lever, Crimping Tool, Automobile Scissors- jack, Bicycle Brake Arm.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

3. Two Unit Tests each of **25 Marks**
4. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module
-

Suggested Learning Resources:**Books**

1. Robert L. Norton, Machine design - An Integrated Approach, 4th Edition, Prentice- Hall, 2011
2. R G Budynas, and J K Nisbett, Shigley's Mechanical Engineering Design, 9th Edition, McGraw Hill, 2011

Web links and Video Lectures (e-Resources):

1. <https://www.machinedesign.com/>

3. <https://archive.nptel.ac.in/courses/112/105/112105124/>

Skill Development Activities Suggested

1. Write a small C Program to design a shaft for both static and dynamic loading
2. Compute the fatigue life of simple rod subject to constant amplitude load in a commercial software
3. Learn the usage of MSC Fatigue Module of NASTRAN

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Define basic philosophies used in Machine Design	2
CO2	Design and Analyse any geometrically well-defined component subjected to static loading	1
CO3	Design and Analyse a simple component subjected to fatigue loading	4

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/ investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Mapping of COs and POs

	PO1	PO2	PO3	PO4	PO5

CO2	3	2	1	3	1
CO3	3	2	1	2	1

Note : High - 1, Medium – 2, and Low – 3

Computer Simulation of Machines			
Course Code	MMMD/MMDE206	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	03:00:00	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
This course will enable students to			
<ol style="list-style-type: none"> 1. Know the concepts used for kinematic analysis of planar and spatial mechanisms. 2. Familiarize with the concepts of synthesis of mechanisms. 			
MODULE-1(8 Hours)			
Introduction: Elements of Mechanisms, degrees of freedom, Kutzbach equation and Grubler's criterion -applications of Grubler's criterion, transmission angles- extreme values of transmission angles, toggle positions. Introduction to Vector Loop and Vector Chain Equations. The Planar Vector, Single Loop Equations, Derivatives of Vectors.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2(8 Hours)			
Path Curvature Theory: Hartmann construction, Euler Savary Equation, Bobillier's Construction. Introduction to synthesis (analytical methods): Freudenstein's equation and problems, Block synthesis and problems, Reven's method and its problems.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3(8 Hours)			
Kinematic Synthesis: Introduction, type, dimensional and number Synthesis, synthesis for function generation, path and motion generation, Chebyshev Spacing of accuracy points. Graphical Synthesis Techniques: Motion generation for two prescribed positions and three prescribed positions – path generation for three prescribed positions without and with prescribed timing – function generation for three prescribed positions.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4(8 Hours)			
Analytical Synthesis Techniques: Four-bar and slider crank function generator with three accuracy points– use of complex numbers and dyads – three prescribed positions for motion, path and function generation using dyad.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5(8 Hours)			
Spatial Mechanisms: Introduction, Position analysis problem, Velocity and acceleration analysis, Eulerian angles, D-H transformation matrix; forward kinematic analysis of serial manipulators.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,

2. Kinematics Of Machines https://www.youtube.com/watch?v=MJeRFzs4oRU&list=RDCMUC640y4UvDAIya_WOj5U4pfA&index=2

Skill Development Activities Suggested

1. Write a MATLAB Program for kinematic analysis of Fourbar mechanism
2. Write a program in MATLAB to simulate the forward kinematics of a 2R Robotic Arm.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Apply path curvature characteristics in analysis of mechanisms.	2
CO2	Apply analytical and synthesis techniques in design of mechanisms.	1
CO3	Apply forward and reverse kinematic analysis techniques in performance evaluation of manipulators	4

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/ investigation and development work to solve practical problems.	1
2	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
3	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
4	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Course Code	MMMD/MMDEL207	CIE Marks	50
Teaching Hours/Week (L:T:P: S)	00:00:03:00	SEE Marks	50
Credits	02	Exam Hours	03
Course objectives:			
By the end of this course, students will be able to:			
<ol style="list-style-type: none"> 1. Apply Finite Element Analysis (FEA) to solve structural problems and understand stress, strain, and deformation in mechanical components. 2. Analyze multi-body dynamic systems using simulation tools to evaluate kinematics and dynamic behaviours of mechanisms. 3. Implement computational optimization techniques to improve the performance and efficiency of mechanical structures. 4. Model and simulate mechanical systems such as gears, trusses, and linkages using industry-standard software. 5. Utilize machine learning techniques for the classification of material properties based on mechanical characteristics. 			
** Software mentioned are representative only, any other equivalent commercial or open source software can be used			
Sl.NO	Experiments		
1	Static Structural Analysis of a Cantilever Beam <ul style="list-style-type: none"> • Objective:Analyze a cantilever beam subjected to a point load. • Software: MSC Nastran / MATLAB • Outcome: Understanding stress, displacement, and boundary conditions. 		
2	Modal Analysis of a Plate Structure <ul style="list-style-type: none"> • Objective: Compute the natural frequencies and mode shapes of a rectangular plate. • Software: MSC Nastran / Python • Outcome: Learning eigenvalue analysis for vibration studies. 		
3	Multi-Body Dynamic Simulation of a Four-Bar Mechanism <ul style="list-style-type: none"> • Objective: Simulate a four-bar linkage and analyze motion parameters like velocity and acceleration. • Software: MSC Adams • Outcome: Understanding kinematic and dynamic behavior of mechanisms. 		
4	Finite Element Analysis of a 2D Truss Structure <ul style="list-style-type: none"> • Objective: Solve a 2D truss problem using the stiffness matrix method. • Software: MATLAB / MSC Nastran • Outcome: Understanding axial forces, stress distribution, and deformations. 		
5	Optimization of Structural Components using Quadratic Programming <ul style="list-style-type: none"> • Objective: Optimize a mechanical component subjected to constraints using quadratic programming. • Software: Python (cvxopt) • Outcome: Exposure to optimization techniques in mechanical design. 		
6	Multi-Body Dynamic Analysis of a Suspension System <ul style="list-style-type: none"> • Objective: Simulate and analyze a vehicle suspension system under a road profile. • Software: MSC Adams • Outcome: Understanding shock absorption, damping, and ride comfort. 		
7	Computational Analysis of a Simple Gear Train <ul style="list-style-type: none"> • Objective: Model and simulate a gear train to evaluate torque transmission and speed ratios. • Software: MSC Adams • Outcome: Understanding gear motion, forces, and efficiency. 		
8	Machine Learning-Based Classification of Material Properties <ul style="list-style-type: none"> • Objective: Apply K-Means and Fuzzy C-Means clustering to classify materials based on mechanical properties. • Software: Python (scikit-learn, NumPy) • Outcome: Understanding unsupervised learning applications in material classification. 		
Demonstration Experiments (For CIE) if any			
9	Buckling Analysis of a Slender Column <ul style="list-style-type: none"> • Objective: Simulate buckling behavior of a column under axial compression. • Software: MSC Nastran 		

	<ul style="list-style-type: none"> • Outcome: Understanding critical load determination and stability analysis.
10	Impact Analysis of a Drop Test on a Mechanical Component <ul style="list-style-type: none"> • Objective: Simulate an impact test for a falling object striking a rigid surface. • Software: MSC Nastran / MATLAB • Outcome: Understanding stress wave propagation and impact forces.
11	Fatigue Analysis of a Rotating Shaft <ul style="list-style-type: none"> • Objective: Perform a fatigue life prediction for a rotating shaft under cyclic loading. • Software: MSC Nastran • Outcome: Understanding failure prediction and fatigue cycles.
12	Topology Optimization of a Mechanical Bracket <ul style="list-style-type: none"> • Objective: Optimize the shape and material distribution of a mechanical bracket to minimize weight while maintaining strength. • Software: MSC Nastran / MATLAB • Outcome: Understanding design optimization and lightweight structures.
<p>Course outcomes (Course Skill Set): At the end of the course the student will be able to:</p> <ul style="list-style-type: none"> • Perform static and dynamic analysis of mechanical components using FEA-based software like MSC Nastran and MATLAB. • Simulate and evaluate motion characteristics of multi-body systems such as linkages, suspensions, and gear trains using MSC Adams. • Solve optimization problems in mechanical engineering using Python-based quadratic programming techniques. • Analyze real-world mechanical problems and validate results through computational simulations. • Apply AI-based clustering techniques to classify materials based on their mechanical properties using Python. 	
<p>Assessment Details (both CIE and SEE)</p> <p>The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each course. The student has to secure not less than 40% of maximum marks in the semester-end examination(SEE). In total of CIE and SEE student has to secure 50% maximum marks of the course.</p> <p>Continuous Internal Evaluation (CIE): CIE marks for the practical course is 50 Marks. The split-up of CIE marks for record/ journal and test are in the ratio 60:40.</p> <ul style="list-style-type: none"> • Each experiment to be evaluated for conduction with an observation sheet and record write-up. Rubrics for the evaluation of the journal/write-up for hardware/software experiments designed by the faculty who is handling the laboratory session and is made known to students at the beginning of the practical session. • Record should contain all the specified experiments in the syllabus and each experiment write-up will be evaluated for 10 marks. • Total marks scored by the students are scaled down to 30 marks (60% of maximum marks). • Weightage to be given for neatness and submission of record/write-up on time. • Department shall conduct 01 tests for 100 marks, test shall be conducted after the 14th week of the semester. • In test, test write-up, conduction of experiment, acceptable result, and procedural knowledge will carry a weightage of 60% and the rest 40% for viva-voce. • The suitable rubrics can be designed to evaluate each student's performance and learning ability. • The test marks is scaled down to 20 marks (40% of the maximum marks). <p>The Sum of scaled-down marks scored in the report write-up/journal and marks of test is the total CIE marks scored by the student.</p>	

Semester End Evaluation (SEE):

SEE marks for the practical course is 50 Marks.

SEE shall be conducted jointly by the two examiners of the same institute, examiners are appointed by the University.

All laboratory experiments are to be included for practical examination.

(Rubrics) Breakup of marks and the instructions printed on the cover page of the answer script to be strictly adhered to by the examiners. **OR** based on the course requirement evaluation rubrics shall be decided jointly by examiners.

Students can pick one question (experiment) from the questions lot prepared by the internal /external examiners jointly.

Evaluation of test write-up/ conduction procedure and result/viva will be conducted jointly by examiners.

General rubrics suggested for SEE are mentioned here, writeup-20%, Conduction procedure and result in -60%, Viva-voce 20% of maximum marks. SEE for practical shall be evaluated for 100 marks and scored marks shall be scaled down to 50 marks (however, based on course type, rubrics shall be decided by the examiners)

Change of experiment is allowed only once and 10% Marks allotted to the procedure part to be made zero.

The duration of SEE is 03 hours

Semester End Evaluation (SEE):

SEE marks for the practical course is 50 Marks.

SEE shall be conducted jointly by the two examiners of the same institute, examiners are appointed by the University.

All laboratory experiments are to be included for practical examination.

(Rubrics) Breakup of marks and the instructions printed on the cover page of the answer script to be strictly adhered to by the examiners. **OR** based on the course requirement evaluation rubrics shall be decided jointly by examiners.

Students can pick one question (experiment) from the questions lot prepared by the internal /external examiners jointly.

Evaluation of test write-up/ conduction procedure and result/viva will be conducted jointly by examiners.

General rubrics suggested for SEE are mentioned here, writeup-20%, Conduction procedure and result in -60%, Viva-voce 20% of maximum marks. SEE for practical shall be evaluated for 100 marks and scored marks shall be scaled down to 50 marks (however, based on course type, rubrics shall be decided by the examiners)

Change of experiment is allowed only once and 10% Marks allotted to the procedure part to be made zero.

The duration of SEE is 03 hours

Ability /Skill Enhancement Courses

Numerical Programming for Mechanical Engineers (Using MATLAB/NumPy)		Semester	02
Course Code	MMMD/MMDE258A	CIE Marks	50
Teaching Hours/Week (L:T:P: S)	0:0:0:2	SEE Marks	50
Total Hours of Pedagogy	15	Total Marks	100
Credits	01	Exam Hours	1 Hour
Examination type (SEE)	MCQ		
Note: Instead of MATLAB any equivalent open source and commercial software can be used			
Course objectives:			
By the end of this course, students will be able to:			
<ol style="list-style-type: none"> 1. Gain knowledge of basic numerical methods and algorithms used in mechanical engineering. 2. Understand the mathematical foundations and applications of numerical techniques. 3. Learn to use MATLAB and NumPy for numerical problem-solving in mechanical engineering contexts. 4. Familiarize with key concepts in solving linear and nonlinear equations, interpolation, and numerical differentiation. 5. Learn to apply numerical methods for mechanical engineering simulations and error analysis. 			
Teaching-Learning Process (General Instructions)			
These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.			
<ol style="list-style-type: none"> 1. Hands-On Coding Assignments 2. Lab Sessions 3. Project-Based Learning 4. Interactive Demonstrations 5. Comparative Analysis 6. Visualizations 7. Regular Quizzes and Tests 8. Continuous Feedback and Assessment 			
Module-1			
Introduction to Numerical Programming			
Overview of Numerical Methods: Basic definitions and examples of numerical methods, Significance of numerical programming in engineering. Introduction to MATLAB and NumPy: Syntax, commands, and basic operations, Understanding variables, matrices, and vectors. Basic Programming Constructs: Loops, conditional statements, and functions, Debugging techniques in MATLAB/NumPy			
Module-2			
Solving Linear and Nonlinear Equations:			
Linear Systems of Equations: Gaussian elimination, LU decomposition. Iterative methods: Jacobi and Gauss-Seidel. Nonlinear Equations: Bisection method, Newton-Raphson method, Fixed-point iteration			
Module-3			
Numerical Differentiation and Integration:			
Numerical Differentiation: Forward and backward difference methods, Central difference approximation. Numerical Integration: Trapezoidal rule, Simpson's rule			
Module-4			
Interpolation and Curve Fitting:			
Polynomial Interpolation: Lagrange and Newton interpolation methods,Application to curve fitting.Least Squares Method: Fitting a linear model to data points			
Module-5			

Numerical Solutions of Ordinary Differential Equations (ODEs)

Introduction to ODEs: Types of ordinary differential equations in mechanical engineering, Initial value and boundary value problems.

Numerical Methods for ODEs: **Euler's method, Runge-Kutta methods (4th order)**

Course outcome (Course Skill Set)

At the end of the course the student will be able to::

1. Identify the appropriate numerical method for a given engineering problem.
2. Understand and recognize various methods for solving equations, integration, and interpolation.
3. Select suitable algorithms for solving ODEs in mechanical engineering.
4. Evaluate the accuracy of numerical methods and identify common sources of error.
5. Apply numerical methods to basic mechanical engineering problems using MATLAB/NumPy.

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). The student is declared as a pass in the course if he/she secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Continuous internal Examination (CIE)

- For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
- The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
- Any two assignment methods mentioned in the 22OB2.4, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
- For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examinations (SEE)

SEE paper shall be set for 50 questions, each of the 01 marks. The pattern of the question paper is MCQ (multiple choice questions). The time allotted for SEE is **01 hour**. The student has to secure a minimum of 35% of the maximum marks meant for SEE.

Suggested Learning Resources:

Books

1. "Numerical Methods for Engineers" by Steven C. Chapra and Raymond P. Canale
2. "Applied Numerical Methods with MATLAB for Engineers and Scientists" by Steven C. Chapra
3. "Numerical Methods in Engineering with Python 3" by JaanKiusalaas
4. "MATLAB for Engineers" by Holly Moore
5. "Python for Engineers and Scientists" by E.M. Kranakis

- Gamification of Learning
- Online Code Repositories

Python Programming for Beginners		Semester	02
Course Code	MMMD/MMDE258B	CIE Marks	50
Teaching Hours/Week (L:T:P: S)	0:0:0:2	SEE Marks	50
Total Hours of Pedagogy		Total Marks	100
Credits	01	Exam Hours	1 Hour
Examination type (SEE)	MCQ		
<p>By the end of this course, students will be able to:</p> <ol style="list-style-type: none"> 1. Understand the fundamentals of Python programming, including variables, control structures, and data types. 2. Develop basic Python scripts to solve computational problems. 3. Understand and use functions, libraries, and modules to enhance programming capabilities. 4. Learn to work with files and handle exceptions in Python. 5. Apply Python programming skills to solve practical, real-world problems in mechanical engineering and other domains. 			
<p>Teaching-Learning Process (General Instructions) These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.</p> <ol style="list-style-type: none"> 1. Hands-On Coding Assignments 2. Lab Sessions 3. Project-Based Learning 4. Interactive Demonstrations 5. Comparative Analysis 6. Visualizations 7. Regular Quizzes and Tests 8. Continuous Feedback and Assessment 			
Module-1			
<p>Introduction to Python Programming</p> <ul style="list-style-type: none"> • Python Basics: Variables, data types, and basic operators. • Control Structures: If-else conditions, loops (for, while). • Basic Input/Output: Reading from and writing to the console. 			
Module-2			
<p>Data Structures and Collections</p> <ul style="list-style-type: none"> • Lists and Tuples: Creating and manipulating lists and tuples. • Dictionaries and Sets: Using dictionaries for key-value pairs, and sets for unique elements. • List Comprehensions: Efficiently creating and modifying lists. 			
Module-3			
<p>Functions and Modular Programming</p> <ul style="list-style-type: none"> • Functions: Defining and calling functions, parameters, and return values. • Lambda Functions: Anonymous functions for compact code. • Modules: Importing and using Python standard libraries. 			
Module-4			
<p>File Handling and Exception Handling</p> <ul style="list-style-type: none"> • Reading and Writing Files: Handling text and binary files. • Exception Handling: Try-except blocks to manage errors gracefully. • Context Managers: Using with statements for file management. 			
Module-5			

Introduction to Libraries for Engineering Applications

- **NumPy:** Arrays, mathematical operations, and linear algebra.
- **Matplotlib:** Basic plotting and visualization for engineering data.
- **Integration with Mechanical Systems:** Simple Python applications to solve engineering problems.

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

1. Write and execute simple Python programs.
2. Implement control structures (e.g., loops, conditionals) and data structures (e.g., lists, dictionaries).
3. Create and call functions to modularize and reuse code.
4. Handle errors and exceptions to ensure program stability.
5. Use libraries such as NumPy and Matplotlib for basic engineering calculations and data visualization.

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). The student is declared as a pass in the course if he/she secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Continuous internal Examination (CIE)

- For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
- The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
- Any two assignment methods mentioned in the 22OB2.4, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
- For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examinations (SEE)

SEE paper shall be set for 50 questions, each of the 01 marks. The pattern of the question paper is MCQ (multiple choice questions). The time allotted for SEE is **01 hour**. The student has to secure a minimum of 35% of the maximum marks meant for SEE.

Suggested Learning Resources:

Books

1. "Automate the Boring Stuff with Python" by Al Sweigart
2. "Python Crash Course" by Eric Matthes
3. "Learning Python" by Mark Lutz
4. "Python for Data Analysis" by Wes McKinney
5. "Python Programming: An Introduction to Computer Science" by John Zelle

Web links and Video Lectures (e-Resources):

1. **Python Official Documentation:** <https://docs.python.org/3/>
2. **W3Schools Python Tutorial:** <https://www.w3schools.com/python/>
3. **Python for Everybody (Coursera):** <https://www.coursera.org/specializations/python>
4. **NumPy Documentation:** <https://numpy.org/doc/stable/>
5. **Matplotlib Documentation:** <https://matplotlib.org/stable/contents.html>

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

1. **Interactive Online Coding Platforms:**

Encourage students to practice coding through interactive platforms like **Replit**, **Jupyter Notebooks**, or **Google Colab** where they can run Python code directly in their browsers.

2. **Project-Based Learning:**

Assign small projects where students can apply the concepts learned in the modules. Example projects could include writing a Python script to calculate the area of mechanical components, plotting data from experiments, or solving simple mathematical problems related to mechanical engineering.

3. **Online Tutorials and Video Resources:**

Provide links to YouTube channels or online courses that explain the course concepts in depth, such as **Corey Schafer's Python tutorials** or the **Python for Everybody** Coursera series.

Multi-Body Simulation using VTU's CoE Software		Semester	02
Course Code	MMMD/MMDE258C	CIE Marks	50
Teaching Hours/Week (L:T:P: S)	0:0:0:2	SEE Marks	50
Total Hours of Pedagogy		Total Marks	100
Credits	01	Exam Hours	1 Hour
Examination type (SEE)	MCQ		

Course objectives:

1. Introduce fundamental multi-body dynamics concepts.
2. Teach students kinematic and dynamic analysis of mechanisms.
3. Familiarize students with contact forces and flexible bodies in simulations.
4. Develop skills in pre-processing, simulation, and result interpretation.
5. Apply basic design and optimization techniques in simulations.

Teaching-Learning Process (General Instructions)

These are sample Strategies, which teachers can use to accelerate the attainment of the various course outcomes.

1. Hands-On Coding Assignments
2. Lab Sessions
3. Project-Based Learning
4. Interactive Demonstrations
5. Comparative Analysis
6. Visualizations
7. Regular Quizzes and Tests
8. Continuous Feedback and Assessment

Module-1

Introduction to Multi-Body Simulation: Concepts Covered: Degrees of Freedom (DOF), joints, constraints, motion simulation. **Software Used:** MSC Adams

Experiments:

1. **Kinematic Analysis of a Four-Bar Mechanism** – Simulate motion and measure angular velocity.
2. **Dynamic Simulation of a Slider-Crank Mechanism** – Analyze displacement and acceleration.

Module-2

Basic Structural Integration in MBD: Concepts Covered: Rigid vs. flexible bodies, introduction to modal analysis. **Software Used:** MSC Adams, MSC Nastran

Experiments:

3. **Rigid Body vs. Flexible Body Simulation of a Beam** – Convert a beam from rigid to flexible and observe the difference.
4. **Basic Modal Analysis of a Simple Structure** – Perform a modal analysis and integrate it in MSC Adams.

Module-3

Contact Forces and Friction in Mechanisms: Concepts Covered: Contact modeling, friction, force analysis.
Software Used: MSC Adams

Experiments:

5. **Simulation of a Simple Gear Pair** – Model gear contact forces in MSC Adams.
6. **Effect of Friction on a Sliding Block** – Analyze a block sliding on an inclined plane with different friction coefficients.

Module-4

Vehicle and Suspension System Basics: Concepts Covered: Suspension dynamics, vehicle stability. Software Used: MSC Adams

Experiments:

7. **Simulation of a Basic Suspension System** – Study the displacement and forces in a simplified double-wishbone suspension.
8. **Steering System Kinematics** – Model a rack-and-pinion mechanism and analyze wheel movement.

Module-5

Design Optimization and Basic System Analysis: Concepts Covered: Parameter optimization, system improvement. Software Used: MSC Adams

Experiments:

9. **Optimization of a Simple Linkage Mechanism** – Adjust link lengths to improve efficiency.
10. **Analysis of a Bouncing Ball with Damping** – Model motion with varying damping coefficients.

Course outcome (Course Skill Set)

At the end of the course the student will be able to::

1. Simulate basic multi-body mechanisms using MSC Adams.
2. Perform kinematic and dynamic analysis of simple mechanical systems.
3. Understand contact forces and frictional effects in moving systems.
4. Integrate basic flexible body behavior into multibody simulations.
5. Apply optimization techniques for system improvement.

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). The student is declared as a pass in the course if he/she secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Continuous internal Examination (CIE)

- For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
- The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
- Any two assignment methods mentioned in the 22OB2.4, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
- For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examinations (SEE)

SEE paper shall be set for 50 questions, each of the 01 marks. The pattern of the question paper is MCQ (multiple choice questions). The time allotted for SEE is **01 hour**. The student has to secure a minimum of 35% of the maximum marks meant for SEE.

Module-1			
Introduction to Additive Manufacturing : Historical Development and Classification of Additive Manufacturing Processes, Process Chain: CAD Model, Slicing, Printing, and Post-Processing, Overview of 3D Printing Technologies: FDM, SLA, SLS, DMLS, Materials for Additive Manufacturing: Polymers, Metals, Ceramics, and Composites, Applications in Aerospace, Healthcare, and Automotive Industries			
Module-2			
Advanced Additive Manufacturing Processes: Multi-Material and Hybrid Printing Techniques, Lattice Structures and Topology Optimization, Surface Quality, Accuracy, and Post-Processing Methods, Economic and Environmental Considerations, Case Studies of Additive Manufacturing Applications.			
Module-3			
Fundamentals of Robotic Simulation: Introduction to Industrial Robotics: Kinematics and Dynamics, Basics of Robot Programming and Task Planning, Simulation Platforms: RoboDK, MSC Adams, MATLAB Simulink, Virtual Model Creation and Path Planning, Simulation of Robotic Operations: Assembly, Welding, and Inspection.			
Module-4			

Multi-Body Simulation and System Analysis : Kinematic and Dynamic Simulation of Multi-Body Systems, Path Optimization and Collision Detection, Virtual Prototyping for Manufacturing and Automation, Failure Prediction through Simulation Analysis, Practical Examples using RoboDK and MSC Adams.

Module-5

Integration and Future Trends: Integration of 3D Printing and Robotic Automation, Digital Twins and Industry 4.0 Applications, Challenges in Process Control and Workflow Synchronization, Emerging Trends: AI in Additive Manufacturing and Robotics, Case Studies and Real-World Implementations.

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

1. Describe the principles, technologies, and workflows of additive manufacturing.
2. Identify appropriate materials and processes for specific 3D printing applications.
3. Simulate robotic operations using virtual programming platforms.
4. Analyze multi-body systems for manufacturing and automation tasks.
5. Evaluate real-world applications of integrated 3D printing and robotics.

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 40% of the maximum marks (20 marks out of 50) and for the SEE minimum passing mark is 35% of the maximum marks (18 out of 50 marks). The student is declared as a pass in the course if he/she secures a minimum of 40% (40 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together

Continuous internal Examination (CIE)

- For the Assignment component of the CIE, there are 25 marks and for the Internal Assessment Test component, there are 25 marks.
- The first test will be administered after 40-50% of the syllabus has been covered, and the second test will be administered after 85-90% of the syllabus has been covered
- Any two assignment methods mentioned in the 22OB2.4, if an assignment is project-based then only one assignment for the course shall be planned. The teacher should not conduct two assignments at the end of the semester if two assignments are planned.
- For the course, CIE marks will be based on a scaled-down sum of two tests and other methods of assessment.

Internal Assessment Test question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examinations (SEE)

SEE paper shall be set for 50 questions, each of the 01 marks. The pattern of the question paper is MCQ (multiple choice questions). The time allotted for SEE is **01 hour**. The student has to secure a minimum of 35% of the maximum marks meant for SEE.

Activity Based Learning (Suggested Activities in Class)/ Practical Based learning

- Collaborative Learning
- Gamification of Learning
- Online Code Repositories

Professional Electives

OPTIMIZATION TECHNIQUES			
Course Code	MMMD/MMDE214A	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
<ol style="list-style-type: none"> 1. Enumerate the fundamental knowledge of Linear Programming and Dynamic Programming problems. 2. Learn classical optimization techniques and numerical methods of optimization. 3. Know the basics of different evolutionary algorithms. 4. Explain Integer programming techniques and apply different optimization techniques to solve various models arising from engineering areas 			
MODULE-1			
Liner Programming (LP): Revised Simplex Method, Dual simplex Method, Sensitivity Analysis			
Dynamic Programming (DP): Multistage decision processes. Concepts of sub optimization, Recursive Relation-calculus method, tabular method, LP as a case of D.P			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2			
Classical Optimization Techniques: Single variable optimization without constraints, Multi variable optimization without constraints, multivariable optimization with constraints method of Lagrange multipliers, Kuhn-Tucker conditions.			
Numerical Methods For Optimization: Nelder Mead's Simplex search method, Gradient of a function, Steepest descent method, Newton's method			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3			
Modern methods of optimization:			
Genetic Algorithm (GA): Differences and similarities between conventional and evolutionary algorithms, working principle, Genetic Operators- reproduction, crossover, mutation.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4			
Genetic Programming (GP): Principles of genetic programming, terminal sets, functional sets, differences between GA & GP, Random population generation.			
Fuzzy Systems: Fuzzy set Theory, Optimization of Fuzzy systems			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5			
Integer Programming: Graphical Representation, Gomory's Cutting Plane Method, Balas' Algorithm for Zero-One Programming, Branch-and-Bound Method.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

7. Two Unit Tests each of **25 Marks**
8. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module

Skill Development Activities Suggested

1. One or two exercises of Optimization using MATLAB/Python.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Apply the fundamental knowledge of Linear Programming and Dynamic Programming problems.	3
CO2	Use classical optimization techniques and numerical methods of optimization.	2
CO3	Enumerate fundamentals of Integer programming technique and apply different techniques to solve various optimization problems arising from engineering areas.	2

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Mapping of COs and POs

	PO1	PO2	PO3	PO4	PO5
CO1	3	-	1	1	1
CO2	3	-	1	3	1
CO3	3	-	1	3	2

Note : High - 1, Medium – 2, and Low – 3

FATIGUE AND FRACTURE MECHANICS			
Course Code	MMMD/MMDE214B	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	30	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
<ol style="list-style-type: none"> 1. Introduce basic aspects of Fatigue and Failure. 2. Discuss the availability of various fatigue analysis methods that are used by professional. 3. Know the modifications required in case of mean stress and notches 4. To understand various cycle counting methods used in industries and in commercial software. 5. To understand the basic Fracture Mechanics 			
MODULE-1			
Fatigue Damage Theories: Fatigue damage mechanism, Cumulative damage models,Linear damage models,Double linear damage rule by Manson and Halford.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2			
Stress-Based Fatigue Analysis and Design: Introduction,The stress-life (S-N) and fatigue limit testing, Estimated SN curve of a component based on ultimate tensile strength, Notch effect, Mean stress effect,Combined proportional loads.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3			
Strain-Based Fatigue Analysis and Design: Introduction, Experimental test program, Analysis of monotonic and cyclic stress–strain behaviour of materials,Mean stress correction methods,Estimation of cyclic and fatigue properties,Notch analysis.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4			
Cycle Counting Techniques: One-parameter cycle counting methods,Two-parameter cycle counting methods,Four-Point Cycle Counting Method,Reconstruction of a load-time history.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5			
Introduction to Fracture Mechanics: assumptions of LEFM, brittle vs. ductile fracture, stress intensity factor (SIF) for Mode I, Mode II, and Mode III, crack tip stress fields, Griffith's energy criterion, Irwin's modification for plastic zone, fracture toughness (K_{IC}) and its measurement, crack tip plasticity models (Irwin and Dugdale), R-curve and stable crack growth, failure prediction, applications in aerospace, automotive, and structural components.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

9. Two Unit Tests each of **25 Marks**
10. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module

6. MIT OpenCourseWare - Fracture Mechanics: <https://ocw.mit.edu/courses/mechanical-engineering/>

Skill Development Activities Suggested

1. Write MATLAB/ SCILAB programs to implement the rain flow counting
2. Run a MSC NASTRAN Fatigue Analysis
3. Try A sample Problem of Spot Welding in MSC Fatigue
4. Explore various Fatigue and Fracture software such as NASGRO, FRANC3D, NISA Endure etc.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Correctly predict Fatigue life of metal components using Stress and Strain life Methods.	3
CO2	Analyse the situation to apply appropriate fatigue failure method	3
CO3	Identify and describe the basic fatigue mechanisms.	2
CO4	Use appropriate Rain counting Method for variable amplitude loading	3

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Program Outcome of this course

Mapping of COs and POs

	PO1	PO2	PO3	PO4	PO5
CO1	1	3	1	3	1
CO2	3		1	3	1
CO3	3		1	2	1
CO4	3	3	1	3	3

Note : High - 1, Medium – 2, and Low – 3

SUSTAINABILITY ENGINEERING			
Course Code	MMMD/MMDE214C	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
<ol style="list-style-type: none"> 1. To have an increased awareness among students on issues in areas of sustainability 2. To understand the role of engineering and technology with sustainable development. 3. To know the methods, tools and incentives for sustainable products service system development 4. To establish clear understanding of the role and impact t of various aspects of engineering decisions on environmental, societal and economic problems 			
MODULE-1			
Sustainability: Introduction, concept, evolution of the concept; Social, environmental and economic sustainability concepts; Sustainable development, Nexus between Technology and Sustainable development.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2			
Environmental Pollution: Air Pollution and its effects, Water pollution and its sources, Zero waste concept and 3 R concepts in solid waste management; Greenhouse effect, Global warming, Climate change, Ozone layer depletion, legal provisions for environmental protection.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3			
Environmental Management Standards: ISO 14001:2015 frame work and benefits, Scope and goal of Life Cycle Analysis (LCA),			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4			
Resources and its Utilisation: Basic concepts of Conventional and non-conventional energy, General idea about solar energy, Fuel cells, Wind energy, Small hydro plants, bio-fuels,			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5			
Sustainability Practices: Basic concept of sustainable habitat, Methods for increasing energy efficiency in buildings, Green Engineering, Sustainable Urbanization, Sustainable cities, Sustainable transport			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

11. Two Unit Tests each of **25 Marks**
12. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.

Skill Development Activities Suggested

- Case study
- Quizzes
- Assignments
- Seminars

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Understand the relevance and the concept of sustainability and the global initiatives in this direction	
CO2	Explain the different types of environmental pollution problems and their	
CO3	Discuss the environmental regulations and standards	
CO4	Outline the concepts related to conventional and non-conventional energy	
CO5	Demonstrate the broad perspective of sustainable practices by utilizing engineering knowledge and principles	

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Mapping of COs and POs

Signal Analysis And Condition Monitoring			
Course Code	MMMD/MMDE214D	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
1. To study and understand signal and its types 2. To understand the techniques involved in signal conditioning 3. To know the different used in structural health monitoring			
MODULE-1			
Introduction: Basic concepts. Fourier analysis. Bandwidth. Signal types. Convolution.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2			
Signal analysis: Filter response time. Detectors. Recorders. Analog analyzer types.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3			
Practical analysis of stationary signals: Stepped filter analysis. Swept filter analysis. High speed analysis. Real-time analysis.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4			
Practical analysis of continuous non-stationary signals: Choice of window type. Choice of window length. Choice of incremental step. Practical details. Scaling of the results.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5			
Condition monitoring techniques: Visual monitoring, Thermography, Vibration monitoring, Shock pulse monitoring, Wear debris monitoring, Motor current and signature analysis, Acoustic emission, Ultrasound monitoring, ISO standards, Fault detection sensors, Structural Health Monitoring (SHM), integrated Vehicle Health Monitoring (IVHM).			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

13. Two Unit Tests each of **25 Marks**
14. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module

5. Alan V.Oppenheim , Alan S.Willsky, S.HamidNawab, "Signal and System",2 nd Edition, Pearson

Web links and Video Lectures (e-Resources):

NPTEL Video Lectures: Machinery Condition Monitoring and Signal Processing by A R MOHANTY

Skill Development Activities Suggested

Industrial visit / internship to gain hands-on experience on various Condition Monitoring methods.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Discuss different types of signals generated	2
CO2	Apply the various techniques for signal conditioning	3
CO3	Apply various condition monitoring techniques	3

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

	PO1	PO2	PO3	PO4	PO5
CO1	2		1	2	2
CO2	2		1	3	3
CO3	2		1	2	2

Note : High - 1, Medium – 2, and Low – 3

TRIBOLOGY IN DESIGN			
Course Code	MMMD/MMDE214E	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
<ol style="list-style-type: none"> 1. Understand the fundamental principles of friction, wear, and lubrication and their significance in engineering applications. 2. Learn about different types of lubricants, their properties, and selection criteria for various applications. 3. Analyze lubrication modes and theories, including hydrodynamic, hydrostatic, and elasto-hydrodynamic lubrication, along with their applications in bearings. 4. Study the mechanisms of friction and wear, including adhesive, abrasive, fatigue, and chemical wear, and their impact on materials. 5. Explore advanced topics in tribology, such as bio-tribology, MEMS, nano-tribology, and space tribology. 			
MODULE-1(6 Hours)			
Introduction: Overview of the course, history and basic concept of friction, wear and lubrication.			
Lubricants: Types of lubricants, Objectives of lubricant, Physical properties of lubricants, Selection of lubricant.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2(12 Hours)			
Lubrication modes and Theories of lubrication: Modes of lubrication - hydrodynamic, hydrostatic, Elasto-hydrodynamic, mixed and boundary lubrication, Reynolds' equation, Applications of hydrodynamic lubrication theory - Journal bearing and Inclined thrust pad bearing, Hydrodynamic lubrication of roughened surfaces, Theories of Externally pressurized lubrication, Squeeze-film lubrication, Elasto-hydrodynamic lubrication and air lubricated bearing.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3(8 Hours)			
Lubrication regimes and bearings design: Rheological lubrication regime, Functional lubrication regime, Bearing types and its selection. Bearings design.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4(8 Hours)			
Friction and Wear: Origin of sliding friction, Contact between two bodies in relative motion, Types of wear and their mechanisms - Adhesive wear, Abrasive wear, Wear due to surface fatigue and wear due to chemical reactions, wear of metallic materials, Tribology of polymers.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5(6 Hours)			
Special topics: Bio-tribology, Introduction to MEMS, Nano Tribology and Space Tribology			

Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,
---------------------------	--

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

15. Two Unit Tests each of **25 Marks**
16. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module

Suggested Learning Resources:

Books

1. Stachowaik, G.W., Batchelor, A.W., Engineering Tribology, Elsevier, 2010, 3rd Edition.
2. Majumdar B.C, Introduction to bearings, S. Chand & Co., Wheeler publishing, 1999.
3. Andras Z. Szeri, Fluid film lubrication theory and design, Cambridge University press, 1998.
4. TA Stolarski, Tribology in Machine Design, Butterworth-Heinemann, 2000.
5. Williams JA, Engineering Tribology, Oxford Univ. Press, 2001.
6. Cameron A, Basic lubrication theory, Ellis Horwood Ltd., 2002.
7. Neale MJ, Tribology Hand Book, CBS Publications, 2012.
8. Harish Hirani, Fundamentals of Engineering Tribology with Applications, Cambridge University press, 2016.

Web links and Video Lectures (e-Resources):

1. **Introduction to Tribology**
NPTEL Course: "<https://nptel.ac.in/courses/112102015>"
2. **Data-Enabled Tribological Engineering: From Experiments to Predictive Models**
NPTEL Swayam Course: "https://onlinecourses.nptel.ac.in/noc24_me75/preview"
3. **Friction and Wear of Materials: Principles and Case Studies**
NPTEL Course: "<https://archive.nptel.ac.in/courses/113/108/113108083>"
4. **Tribology (Video Course)**
NPTEL Video Lectures: "<https://archive.nptel.ac.in/courses/112/102/112102014>"

5. **VTU Online Courses in Tribology**

VTU Online Course: "<https://online.vtu.ac.in/subcategory/courses/177>*"*

Skill Development Activities Suggested

1. **Friction Measurement Experiment:** Use a tribometer to measure the coefficient of friction for different material pairs.
2. **Wear Testing:** Perform Pin-on-Disk or Ball-on-Disk experiments to study wear mechanisms in metals and polymers.
3. **Lubrication Testing:** Compare the effectiveness of different lubricants under varying conditions.
4. **MSC Adams & MSC Nastran:** Simulate tribological systems, such as journal bearings and contact surfaces.
5. **MATLAB/Python Modeling:** Implement Reynolds' equation and analyze hydrodynamic lubrication profiles.
6. **ANSYS Fluent/CFD Analysis:** Study lubrication flow in bearings and wear characteristics using simulations.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Analyze properties of lubricant and select proper lubricant for a given application.	3
CO2	Identify tribological performance parameters of sliding contact in different lubrication regimes	2
CO3	Design and select appropriate bearings for a given application	4
CO4	Predict the type of wear and volume of wear in metallic and polymer surfaces	3

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
3	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

	PO1	PO2	PO3	PO4	PO5
CO1	1	1	2	1	2
CO2	1	1	2	1	2
CO3	1	1	2	1	2
CO4	1	1	2	1	2

Note : High - 1, Medium – 2, and Low – 3

MECHANICAL BEHAVIOUR OF MATERIALS			
Course Code	MMMD/MMDE215A	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
<ol style="list-style-type: none"> 1. To familiarize the concept of deformation mechanisms in single crystal and polycrystalline materials. 2. To study strengthening mechanisms and mechanics of fracture in ductile and brittle materials 3. To study the fatigue and creep properties of materials under various conditions 4. To familiarize the various characterization techniques used to probe mechanical properties. 			
MODULE-1(5 Hours)			
Plastic Deformation: Concepts of crystals, Plastic deformation by slip and twinning, Slip systems in FCC, BCC and HCP lattices, Critical resolved shear stress for slip, Theoretical shear strength of solids, Stacking faults and deformation bands.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2(5 Hours)			
Dislocation Theory : Observation of dislocations, Climb and cross slip, Dislocations in FCC and HCP lattice, Partial dislocations, Stress fields and energies of dislocations, Forces between dislocations, Interaction of dislocations, Dislocation sources and their multiplications.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3(6 Hours)			
Strengthening Mechanisms: Strengthening from grain boundaries, Grain size measurements, Yield point phenomenon, Strain aging, Solid solution strengthening, Strengthening from fine particles, Fiber strengthening, Cold working and strainhardening, Annealing of cold worked metal.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4(5 Hours)			
Creep and Stress Rupture: Creep curve, Stress rupture test, Mechanism of creep deformation, Activation energy for steady state creep, Superplasticity, Fracture at elevated temperature, Creep resistant alloys, Creep under combined stresses.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-5(4 Hours)			
The Tension Test: Stress-strain curves, Instability in tension, Ductility measurement, Effect of strain rate, temperature and testing machine on flow properties, Stress relaxation testing, Notch tensile test, Anisotropy of tensile properties.			
The Hardness Test: Brinell, Rockwell and Vickers hardness, flow of metal under the indenter,			

relationship between hardness and flow curve, micro hardness testing, Hardness at elevated temperatures.

Teaching-
Learning Process

Power-point Presentation, Chalk and Talk are used for Problem Solving,

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

17. Two Unit Tests each of **25 Marks**
18. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module

Suggested Learning Resources:

Books

1. Dieter M. George, Mechanical Metallurgy, McGraw- Hill Inc., 2001.
2. Richard W Hertzberg Deformation and fracture mechanics, John Wiley & Sons
3. Reed Hill and Robert E, Physical Metallurgy Principles, East West Press
4. Hyden W. M. Structure and properties of Materials, Vol. 3, McGraw Hill

Web links and Video Lectures (e-Resources):

1. Mechanical Behavior of Materials https://onlinecourses.nptel.ac.in/noc21_mm27/preview
2. Mechanical Behaviour of Materials https://onlinecourses.nptel.ac.in/noc22_mm04/preview

Skill Development Activities Suggested

1. Use a strain gage setup to estimate the strains at a surface point of a plate subjected to tensile loading
2. Identify and list the values of SN curves for various alloys of Steel and Aluminium

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Explain the effect of dislocations and their interaction on the material strength	2
CO2	Apply the concept of fracture toughness to material failure	2
CO3	Carry out the Tensile test for a steel specimen	3

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Mapping of COs and POs

	PO1	PO2	PO3	PO4	PO5

DIGITAL MANUFACTURING			
Course Code	MMDE215B	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	
Course Learning objectives:			
<ol style="list-style-type: none"> 1. Understand the Evolution of Industrial Production: 2. Comprehend Digital Manufacturing Systems: 3. Develop Proficiency in CAD and CAM Tools: 4. Explore Additive Manufacturing Technologies: 5. Apply Software and Standards for 3D Printing: 			
Module-1			
Introduction to Digital Manufacturing: Definition of digital manufacturing, Historical perspective on industrial production and outlook, Industrial Revolutions, Industry 4.0, Cyber-physical system, Factory of the future, Operation Mode and Architecture of Digital Manufacturing System.			
Module-2			
Cad Modeling: Design process and role of CAD, Types and applications of design models, Three dimensional modelling schemes, Wire frames and surface representation schemes, Solid modelling - Parametric modelling, Assembly modelling.			
Module-3			
Reverse Engineering: Need, Reverse engineering process, Reverse engineering hardware and software, Geometric model development. Computer Aided Manufacturing: Component modelling, Machine and tool selection, Defining process and parameters, Tool path generation, Simulation, Post processing.			
Module-4			
Additive Manufacturing for Digital Transformation: Introduction to additive manufacturing, Additive manufacturing process chain, Material selection, Manufacturing, Post processing, Additive manufacturing technologies and processes, Vat photo polymerization, Material extrusion, Material jetting, Sheet lamination, Powder bed fusion, Binder jetting, Planning and slicing additive manufacturing software.			
Module-5			
Concept Modelers, Translators and 3D Printing Software: Introduction, Principle, Thermo jet printer, Sander's model market, 3- D printer, Genisys Xs printer, JP system 5, object quadra System-Rapid proto typing. Standard interface to convey geometric description from CAD package to Rapid prototyping system, Stereo Lithography (STL) file, Initial Graphics Exchange Specification (IGES) file, Hewlett-Packard Graphics Language (HP/GL) file.			
Additive manufacturing software for editing features and to export files to printers: Ansys,			

Autodesk Netfabb, 3dSystems, Materialise Magics, Solid Edge, Amphyon.

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

19. Two Unit Tests each of **25 Marks**
20. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.

Skill Development Activities Suggested

1. Explore virtual simulations of Industry 4.0 environments.
2. Design 3D CAD models using SolidWorks, AutoCAD, or Fusion 360 or any equivalent software
3. Perform parametric and assembly modeling of components.
4. Practice 3D scanning and geometric reconstruction.
5. Develop CAD models from scanned point cloud data.
6. Generate CNC tool paths using CAM software.
7. Simulate machining and perform post-processing.
8. Design and slice 3D models for printing.
9. Execute 3D printing projects with different materials.
10. Work with STL, IGES, and HP/GL file formats.
11. Edit and optimize 3D models using Netfabb or Magics.
12. Develop a mini-project integrating CAD, CAM, and 3D printing.
13. Conduct case studies on smart factories.
14. Complete online courses on Industry 4.0 or Additive Manufacturing.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
C01	Explain Architecture of Digital Manufacturing System	2
C02	Discuss on the role of CAD and design process in digital manufacturing	2
C03	Explain the application of reverse engineering / discuss on techniques for processing of CAD models for digital manufacturing	2
Co4	Explain the principal and process involved in development of parts by additive manufacturing	2
C05	Discuss on the use of digital manufacturing equipment / explain the role of software in digital manufacturing	2

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	An ability to write and present a substantial technical report/document.	2
3	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program. The mastery should be at a level higher than the requirements in the appropriate bachelor program.	3
4	Students should be able to design, synthesize and analyse a physical engineering systems using modern tools and techniques.	4
5	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

DESIGN FOR MANUFACTURING AND ASSEMBLY			
Course Code	MMMD/MMDE215C	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	2:0:2	SEE Marks	50
Total Hours of Pedagogy	25 hours + 10-12 activities	Total Marks	100
Credits	03	Exam Hours	03
Course objectives:			
<ol style="list-style-type: none"> 1. Understanding the basic rules for design for manufacturing and material selection. 2. Applying the guidelines for ease of design, manufacturing and assembly. 3. Analyze factors for selection of material and process, relationship to manufacturing processes 4. Apply the concepts of design for manufacturing and assembly for product manufacturing. 5. Compare various manufacturing processes and assembly techniques required for product development to optimise the process. 			
MODULE-1(5 Hours)			
Material and process selection – Introduction, Advantages of applying DFMA, General requirements of early materials and process selection, Selection of Manufacturing processes, Selection of materials. Engineering Design features. – Dimensioning, Tolerances, General Tolerance, Geometric Tolerances,			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2(5 Hours)			
Assembly limits, Datum features. Component design – Machining Considerations – Drills, Milling cutters, Drilling, Keyways, Dowels, Screws, Reduction in machining areas, Simplification by separation and amalgamation, work piece holding, surface grinding, Examples.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3 (5 Hours)			
Component design – Casting Considerations – Pattern, Mould, parting line, cast holes, machined holes, identifying parting line, special sand cores, designing to obviate sand cores. Examples			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4(5 Hours)			
Design for Injection molding and Sheet metal working – Injection molding materials, Molding cycle, Systems, molds, machine size, cycle time, Cost estimation, Insert molding, Design guidelines, Introduction to sheet metalworking.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE 5(5 Hours)			
Selective Assembly: Interchangeable part manufacture and selective assembly, deciding the number of groups Group tolerance of Mating parts equal, Model total and group tolerances of shaft equal. Control of axial play- Introducing secondary machining operations, laminated shims, examples.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Understand the principles of manufacturability and design for manufacture	2
CO2	Design casting for economic production.	4
CO3	Understand the concept of easy assembly, based on rules of DFMA to reduce the time of assembly.	2
CO4	Redesign the parts for easy manufacturing based on rules of DFMA to reduce the time of manufacturing and enhance cost effectiveness.	4
CO5	Design guidelines and background for powder metallurgy parts and reviewing of formed parts.	5

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program.	2
3	Students should be able to conduct analytical and experimental investigations on Industrial and societal problems to provide sustainable solutions.	5

Note : High - 1, Medium – 2, and Low – 3

DESIGN OF AEROSPACE STRUCTURES			
Course Code	MMMD/MMDE215D	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
9. To study basic concepts of aircraft structures & materials, and various types of loads acting on an aircraft. 10. To understand concepts of open and closed thin walled beams. 11. To acquire the knowledge of buckling of plates, joints and fittings. 12. Comprehend the stress analysis on wings and fuselage.			
MODULE-1(8 Hours)			
Loads on Aircraft and Aircraft Materials:			
Loads on Aircraft and Aircraft Materials Loads on Aircraft: Structural nomenclature, Types of loads, load factor, Aerodynamics loads, Symmetric manoeuvre loads, Velocity diagram, Function of structural components.			
Aircraft Materials: Metallic and non-metallic materials, Use of Aluminum alloy, titanium, stainless steel and composite materials. Desirable properties for aircraft application.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2(8 Hours)			
Bending of Open and Closed Thin Walled Beams:			
Symmetrical bending, unsymmetrical bending, direct stress distribution due to bending, position of the neutral axis, load intensity, shear force, and bending moment relationships, deflection due to bending, calculation of section properties, approximation for thin-walled sections.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3(8 Hours)			
Shear and Torsion of Open and Closed Thin Walled Beams:			
General stress, strain, and displacement relationship for open and single-cell closed section thin-walled beams, shear of open section beams, shear centre, shear of closed section beams. Torsion of close section beam, and displacement associated with the Bredt-Batho shear flow. Torsion of open section beam. Combined bending, shear, torsion.			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4(8 Hours)			
Buckling of Plates, Joints and Fittings:			
Buckling of Isotropic flat plates in compression, ultimate compressive strength of Isotropic flat sheet, plastic buckling of flat sheet, columns subjected to local crippling failure, Needham & Gerard method for determining crippling stress, curved sheets in compression, elastic buckling of curved rectangular plates. Pure tension field beams, angle of diagonal tension in web. Joints and Fittings- bolted or riveted joints, accuracy of fitting analysis, eccentrically loaded connections, welded joints, and			

concept of effective width.

Teaching-Learning Process

Power-point Presentation, Chalk and Talk are used for Problem Solving,

MODULE-5(8 Hours)

Stress Analysis in Wing Spars and Box beams: Tapered wing spar, open and closed section beams, beams having variable stringer areas, three- boom shell, torsion and shear, tapered wings, cut-outs in wings.

Stress Analysis in Fuselage Frames: Bending, shear, torsion, cut-outs in fuselages, principles of stiffeners construction, fuselage frames, shear flow distribution.

Teaching-Learning Process

Power-point Presentation, Chalk and Talk are used for Problem Solving,

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

23. Two Unit Tests each of **25 Marks**

24. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module

Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
<p>Course Learning objectives:</p> <ol style="list-style-type: none"> 1. Explain the basics of electric and hybrid electric vehicles, their architecture, technologies and fundamentals. 2. Analyze various electric drives suitable for hybrid electric vehicles. 3. Discuss different energy storage technologies used for hybrid electric vehicles and their control. 4. Demonstrate different configurations of electric vehicles and its components, hybrid vehicle configuration by different techniques, sizing of components and design optimization and energy management. 			
MODULE-1(8 Hours)			
<p>Introduction to Hybrid Electric Vehicles: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies.</p> <p>Conventional Vehicles: Basics of vehicle performance, vehicle power source characterization, transmission characteristics, mathematical models to describe vehicle performance.</p>			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-2(8 Hours)			
<p>Hybrid Electric Drive-trains: Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.</p> <p>Electric Drive-trains: Basic concept of electric traction, introduction to various electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis.</p>			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-3(8 Hours)			
<p>Electric Propulsion unit: Introduction to electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Configuration and control of Induction Motor drives, configuration and control of Permanent Magnet Motor drives, Configuration and control of Switch Reluctance Motor drives, drive system efficiency.</p> <p>Energy Storage: Introduction to Energy Storage Requirements in Hybrid and Electric Vehicles, Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices.</p>			
Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,		
MODULE-4(8 Hours)			

Sizing the drive system: Matching the electric machine and the internal combustion engine (ICE), Sizing the propulsion motor, sizing the power electronics, selecting the energy storage technology, Communications, supporting subsystems

Energy Management Strategies: Introduction to energy management strategies used in hybrid and electric vehicles, classification of different energy management strategies, comparison of different energy management strategies, implementation issues of energy management strategies.

Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,
---------------------------	--

MODULE-5(8 Hours)

Case Studies: Design of a Hybrid Electric Vehicle (HEV), Design of a Battery Electric Vehicle (BEV).

Teaching-Learning Process	Power-point Presentation, Chalk and Talk are used for Problem Solving,
---------------------------	--

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

25. Two Unit Tests each of **25 Marks**
26. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester-End Examination:

- The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- The question paper will have ten full questions carrying equal marks.
- Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- Each full question will have a sub-question covering all the topics under a module.
- The students will have to answer five full questions, selecting one full question from each module
-

Suggested Learning Resources:

Books

1. Iqbal Hussein, Electric and Hybrid Vehicles: Design Fundamentals, CRC Press, 2003.
2. MehrdadEhsani, YimiGao, Sebastian E. Gay, Ali Emadi, Modern Electric, Hybrid Electric and Fuel Cell Vehicles: Fundamentals, Theory and Design, CRC Press, 2004.

3. James Larminie, John Lowry, Electric Vehicle Technology Explained, Wiley, 2003.

Web links and Video Lectures (e-Resources):

1. Introduction to Hybrid and Electric Vehicles - Web course
<https://archive.nptel.ac.in/courses/108/103/108103009/>
2. Introduction to Hybrid Electric Vehicle Systems PD291809
(<https://www.sae.org/learn/content/pd291809/>)
3. Electric Vehicle Engineering Course (https://neat.aicte-india.org/course-details/NEAT2020627_PROD_1)
4. Electric Vehicles (https://www.aicte-india.org/sites/default/files/Model_Curriculum/FINAL%20-%20NEP%202020%20Model%20Syllabus%20for%20Open%20Electives%20in%20Electric%20Vehicles.pdf)

Skill Development Activities Suggested

1. Simulate the electric vehicle in MATLAB/SCILAB modules

Course outcome (Course Skill Set)

At the end of the course the student will be able to:

Sl. No.	Description	Blooms Level
CO1	Explain the basics of electric and hybrid electric vehicles, their architecture, technologies and fundamentals.	1
CO2	Explain the use of different energy storage devices used for hybrid electric vehicles, their technologies and control and select appropriate technology	2
CO3	Interpret working of different configurations of electric vehicles and its components, hybrid vehicle configuration, performance analysis and Energy Management strategies in HEVs.	4

Program Outcome of this course

Sl. No.	Description	POs
1	An ability to independently carry out research/investigation and development work to solve practical problems.	1
2	Students should be able to demonstrate a degree of mastery over the area as per the specialization of the program.	3

Program Outcome of this course

Mapping of COs and POs

	PO1	PO2	PO3	PO4	PO5
CO1	1		1		
CO2	1		1		
CO3	1		1		

Note : High - 1, Medium – 2, and Low – 3
