

Semester- II

Advanced Materials Characterisation Techniques			
Course Code	MMST201	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3;0;0;0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	04	Exam Hours	03
Course Learning objectives:			
Learner shall familiarize about the different methods available to characterize the materials using different application and in failure analysis.			
Module-1			
Importance and the need for materials characterization; X- ray diffraction -- Bragg's condition -- Laue treatment -- reciprocal lattice—intensity of diffracted beam -- crystal structure determination -- atomic scattering factor --geometrical structure factor for s.c, f.c.c and b.c.cc structures -- experimental methods – Laue, rotating crystal and powder photograph methods – estimation of stress, texture and other defects -- electron diffraction -- neutron diffraction.			
			8 Hrs
Teaching-Learning Process	Chalk and Talk method/ Power point presentation		
Module-2			
Particle size analysis techniques based on light scattering, Powder characterisation by microscopy techniques (light, electron), light scattering, gas adsorption (BET), Gas pycnometer for density measurement, and compositional analysis of powders by XRF and ICP techniques.			
			8 Hrs
Teaching-Learning Process	.Chalk and Talk method/ Power point presentation		
Module-3			
Metallography and microstructures, Principles of optical microscopy -resolution, magnification, depth of focus; electron diffraction, imaging (various contrasts), Cross-Sectional and fracture surface analysis of materials/coatings using FESEM, Crystal Identification through Selected area diffraction pattern (SADP) etc.			
			8 Hrs
Teaching-Learning Process	Chalk and Talk method/ Power point presentation		
Module-4			
Electron microscopy: Scanning electron microscopy (SEM), Instrumentation, Electron beam-specimen interaction, Specimen preparation, Energy dispersive spectroscopy (EDS) in electron microscopes; Transmission electron microscopy (TEM) - Basics of TEM, Electron sources, Specimen preparation, Image modes, Image contrast.8 Hrs			
Teaching-Learning Process	Chalk and Talk method/ Power point presentation		
Module-5			
Tribology, Wear type and its Characterization, wear surface analysis, Tribometer, Friction, Low friction materials/coating etc. Instrumentation and principles of techniques used for thermal analysis, micro-thermal analysis, combined method of thermal analysis and their applications in materials characterization.			
			8 Hrs
Teaching-Learning	Chalk and Talk method/ Power point presentation		

Process	
<p>Assessment Details (both CIE and SEE)</p> <p>The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. <ul style="list-style-type: none"> . 												
Skill Development Activities Suggested												
Faculty can assign and supervise Project based assignment individually on any one/two of the topics given in the syllabus. Make sure that the students should acquire the fullest knowledge in the subject												
Course outcome (Course Skill Set)												
At the end of the course the student will be able to :												
Sl. No.	Description											Blooms Level
C01	To familiarize X-ray diffraction and neutron diffraction.											
C02	To familiarize the analysis of particles by using different techniques											
C03	To familiarize optical microscopy, diffraction pattern, FESEM.											
C04	Analysis of surface deformities using different techniques											
C05	To familiarize rheological and visco elastic properties measurement and analysis											
Mapping of COS and POs

Composite Science and Technology			
Course Code	MMST202	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3;0;0;0	SEE Marks	50
Total Hours of Pedagogy	40	Total Marks	100
Credits	03	Exam Hours	03
Course Learning objectives:			
<ul style="list-style-type: none"> • Explain the behavior of constituents in the composite materials • Enlighten the students in different types of reinforcement • Develop the student's skills in understanding the different manufacturing methods available for compositematerial. • Illuminate the knowledge and analysis skills in applying basic laws in mechanics to the composite materials. 			
Module-1			
INTRODUCTION: Definition – Classification and characteristics of Composite materials. Advantages and application of composites. Functional requirements of reinforcement and matrix. Effect of reinforcement (size, shape, distribution, volume fraction) on overall composite performance.			
Teaching-Learning Process			
Module-2			
REINFORCEMENTS: Preparation-layup, curing, properties and applications of glass fibers, carbon fibers, Kevlar fibers and Boron fibers. Properties and applications of whiskers, particle reinforcements. Mechanical Behavior of composites: Rule of mixtures, Inverse rule of mixtures. Isostrain and Isostress conditions.			
Teaching-Learning Process			
Module-3			
Manufacturing of Metal Matrix Composites: Casting – Solid State diffusion technique, Cladding – Hot isostatic pressing. Properties and applications. Manufacturing of Ceramic Matrix Composites: Liquid Metal Infiltration – Liquid phase sintering. Manufacturing of Carbon – Carbon composites: Knitting, Braiding, Weaving. Properties and applications.			
Teaching-Learning Process			
Module-4			
Manufacturing of Polymer Matrix Composites: Preparation of Moulding compounds and prepregs – hand layup method – Autoclave method – Filament winding method – Compression moulding – Reaction injection moulding. Properties and applications.			
Teaching-Learning Process			
Module-5			
Strength: Laminar Failure Criteria-strength ratio, maximum stress criteria, maximum strain criteria, interacting failure criteria, hygrothermal failure. Laminate first ply failure-insight strength; Laminate strength-ply discount truncated maximum strain criterion; strength design using caplet plots; stress concentrations.			
Teaching-Learning Process			

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

3. Three Unit Tests each of **20 Marks**
4. Two assignments each of **20 Marks** or **one Skill Development Activity of 40 marks** to attain the COs and POs

The sum of three tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examination:

6. The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
7. The question paper will have ten full questions carrying equal marks.
8. Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
9. Each full question will have a sub-question covering all the topics under a module.
10. The students will have to answer five full questions, selecting one full question from each module

Suggested Learning Resources:**Books**

1. Hand Book of Composite Materials-ed-Lubin.
2. Composite Materials – K.K.Chawla.
3. Composite Materials Science and Applications – Deborah D.L. Chung.
4. Composite Materials Design and Applications – Danial Gay, Suong V. Hoa, and Stephen W. Tasi.
5. Mechanics of composite materials –Robert M Jones 1998
6. Mechanics of composite materials – Autar K Kaw 1997

2. https://youtu.be/zmbS_TmNDP4?list=PLSGws_74K01-4rcWuB5BEATHSsOrBd1ye

Skill Development Activities Suggested

1. Individual projects on topics covered in class. Students will choose a real life problems related to the discussed topics and implement the solution by using techniques and strategies discussed in the class. For each project, students have to submit a report and present a seminar.
2. Assignments, Quiz and Industrial Visit on relevant topic of the course.

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
C01	Apply the various processing and manufacturing techniques	
C02	Apply the techniques and their characteristics/limitations of synthesis of polymers	
C03	Evaluate the structure-processing-property relationship of metals and polymers.	
C04	Analyze the basic issues involved in polymer blends, metal matrix composites and ceramic matrix composites	
C05	Analyze the stress strain behaviour of the composites	

Program Outcome of this course

Sl. No.	Description	POs

Mapping of COS and POs

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12

C05	3	3	3	2	1	2	0	2	2	2	1	2

Course Code	Mechanical Behaviour of Materials	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	MMST203	SEE Marks	50
Total Hours of Pedagogy	3;0;0;0	Total Marks	100
Credits	3	Exam Hours	3
Course Learning objectives:			
Module-1			
Strength of materials- basic assumptions, elastic and plastic behaviour, stress-strain relationship for elastic behaviour, elements of plastic deformation of metallic materials Mohr"s circle, yielding theories. Theory of plasticity: Elements of theory of plasticity, dislocation theory properties of dislocation, stress fields around dislocations, application of dislocation theory to work hardening, solid solution strengthening, grain boundary strengthening, dispersion hardening.			
Teaching-Learning Process			
Module-2			
Ductile and Brittle Fracture: Ductile and brittle fracture, Charpy and Izod testing, significance of DBTT, ECT, NDT and FATT; elements of fractography - Griffith"s theory, LEFM- COD and J integral -determination of KIC, COD and J integral. Characteristics of fatigue failure: Initiation and propagation of fatigue cracks, factors affecting fatigue strength and methods of improving fatigue behaviour - testing analysis of fatigue data mechanics of fatigue crack propagation, corrosion fatigue.			
Teaching-Learning Process			
Module-3			
Introduction to creep: - creep mechanisms, creep curve, variables affecting creep, accelerated creep testing, development of creep resistant alloys, Larsen Miller parameter - Manson Hafred parameter.			
Teaching-Learning Process			
Module-4			
Stages of failure analysis, classification and identification of various types of fracture. Overview of fracture mechanics, characteristics of ductile and brittle fracture. General concepts, fracture characteristics revealed by microscopy, factors affecting fatigue life Creep, stress rupture, elevated temperature fatigue, metallurgical instabilities, environmental induced failure. Some case studies failures.			
Teaching-Learning Process			
Module-5			
Types of wear, analyzing wear failure. Corrosion failures- factors influencing corrosion failures, overview of various types of corrosion stress corrosion cracking, sources, characteristics of stress corrosion cracking. Procedure for analyzing stress corrosion cracking, various types of hydrogen damage failures. Causes of failure in forging; failure of iron and steel castings, improper heat treatment, stress concentration and service conditions. Failure of weldments - reasons for failure procedure for weld failure analysis.			
Teaching-Learning Process

Professional Elective 3

Thermodynamics and Phase diagrams			
Course Code	MMST214A	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40H	Total Marks	100
Credits	3	Exam Hours	3
Course Learning objectives:			
<ul style="list-style-type: none"> • 			
Module-1			
Solidification of metals, solidification of single crystals, metallic solid solutions, crystalline imperfections, rate process in solids, diffusion in metals. Numerical problems on above.			
Teaching-Learning Process			
Module-2			
Thermodynamics basic concepts (state variables, the first law, the enthalpy concept, heat capacity) The second law (reversible and irreversible processes, entropy, Gibbs energy, Hemholtz energy, Gibbs-Duhems equation, Maxwell's relationships)			
Teaching-Learning Process	.		
Module-3			
Equilibrium conditions (chemical potential, driving force, the third law, Clausius-Clapeyrons equations, Thermodynamic application to materials: Ellingham diagrams; Electrochemistry: Pourbaix diagrams; thermodynamics of solutions, construction and interpretation of 2 component phase diagrams.			
Teaching-Learning Process			
Module-4			
Phase Diagram- Gibbs's Phase rule - Interpretation of mass fractions using Lever's rule -Hume Rothery rules- Binary Iso-morphous system- Binary Eutectic alloy system (Lead-Tin System) -Binary Peritectic alloy system (Iron-Nickel System) - Invariant reactions			
Teaching-Learning Process			
Module-5			
Iron-Iron carbide phase diagram- Slow cooling of Hypo and hyper eutectoid steels - Temperature-Time-Transformation (TTT) and Continuous Cooling Transformation (CCT) Diagrams, Phase equilibria in ceramics			
Teaching-Learning Process			

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

- 7. Three Unit Tests each of **20 Marks**
- 8. Two assignments each of **20 Marks** or **one Skill Development Activity of 40 marks** to attain the COs and POs

The sum of three tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom’s taxonomy as per the outcome defined for the course.

Semester End Examination:

- 16. The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
- 17. The question paper will have ten full questions carrying equal marks.
- 18. Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
- 19. Each full question will have a sub-question covering all the topics under a module.
- 20. The students will have to answer five full questions, selecting one full question from each module

Suggested Learning Resources:

Books

- 1. Introduction to the Thermodynamics of Materials, David R. Gaskell, 5th ed., CRC Press, 2008.
- 2. Phase Transformations in Metals and Alloys, Porter, Easterling; 3ed ed, CRC Press, 1991.
- 3. Thermodynamics in Materials Science, Robert DeHoff; 2nd ed, 2006.
- 4. Ceramic Materials: Science and Engineering, C. Barry Carter, M. Grant Norton; Springer, 2007
- 5. Fundamentals of Materials Science and Engineering, Willian F smith 5THEdn

Smart Materials and Structures			
Course Code	MMST214B	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	3:0:0	SEE Marks	50
Total Hours of Pedagogy	40H	Total Marks	100
Credits	3	Exam Hours	3
Course Learning objectives:			
Module-1			
Smart Structures: Types of Smart Structures, Potential Feasibility of Smart Structures, Key Elements Of Smart Structures, Applications of Smart Structures. Piezoelectric materials, Properties, piezoelectric Constitutive Relations, Depoling and Coercive Field, field strain relation. Hysteresis, Creep and Strain Rate effects, Inchworm Linear Motor. Beam Modelling: Beam Modelling with induced strain Rate effects, Inchworm Linear Motor Beam Modelling with induced strain Actuation-single Actuators, dual Actuators, Pure Extension, Pure Bending harmonic excitation, Bernoulli-Euler beam Model, problems, Piezoelectrical Applications.			
Teaching-Learning Process			
Module-2			
Shape memory Alloy: Experimental Phenomenology, Shape Memory Effect, Phase Transformation, Tanaka"s Constitutive Model, testing of SMA Wires, Vibration Control through SMA, Multiplexing. Applications Of SMA and Problems. ER and MR Fluids: Mechanisms and properties, Fluid Composition and behavior, The Bingham Plastic and Related Models, Pre-Yield Response. Post-Yield flow applications in Clutches, Dampers and Others.			
Teaching-Learning Process			
Module-3			
Vibration Absorbers: series and Parallel Damped Vibrations (Over View), Active Vibration Absorbers, Fiber Optics, Physical Phenomena, Characteristics, Sensors, Fiber Optics in Crack Detection, applications. Control of Structures: Modelling, Control Strategies and Limitations, Active Structures in Practice.			
Teaching-Learning Process			
Module-4			
MEMS - Mechanical Properties of MEMS Materials, Scaling of Mechanical Systems, Fundamentals of Theory, The Intrinsic Characteristics of MEMS, Miniaturization, Microelectronics Integration			
Teaching-Learning Process			
Module-5			
Devices: Sensors and Actuators, Conductivity of Semiconductors, Crystal Planes and Orientation, (Stress and Strain Relations, Flexural Beam Bending Analysis Under Simple Loading Conditions), Polymers in MEMS, Optical MEMS Applications.			
Teaching-Learning Process

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

11. Three Unit Tests each of **20 Marks**
12. Two assignments each of **20 Marks** or **one Skill Development Activity of 40 marks** to attain the COs and POs

The sum of three tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom's taxonomy as per the outcome defined for the course.

Semester End Examination:

26. The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
27. The question paper will have ten full questions carrying equal marks.
28. Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
29. Each full question will have a sub-question covering all the topics under a module.
30. The students will have to answer five full questions, selecting one full question from each module

Course Learning objectives:			
<ul style="list-style-type: none"> • 			
Module-1			
Introduction: Definition of Bio material, Classification of Bio materials, Comparison of properties of some common bio materials, effects of physiological fluid on properties of biomaterials, surface properties, physical and Mechanical properties of Bio materials. Metallic Implants Materials: Stainless Steel, Co-based alloys, Ti and Ti based alloys, Important of stress corrosion cracking, Host tissue reaction with Bio metal, corrosion behaviour, hard tissue replacement implant, orthopaedic implant, dental implants, Percutaneous and skin implants, Vascular implants, Heart valve implant.			
Teaching-Learning Process			
Module-2			
Polymeric Implant Materials: polyolefins, polyamides, acrylic polymers, fluorocarbon polymers, Silicon rubber acetals. Visco elastic behaviour, creep recovery, stress relaxation, strain rate sensitivity, importance of molecular structure, hydrophilic and hydrophobic surface properties, migration of additives, aging and environmental stress cracking, physiochemical characteristics of bio polymers, bio degradable polymers for medical purpose and their biological applications. Ceramic Implant Materials: Definitions of Bio ceramics, common type of Bio ceramics, Aluminium oxides, Glass ceramics, Carbons. Bioresorbable and Bioactive ceramics, Importance of wear resistance and low fracture toughness. Host Tissue reactions, Importance of Interfacial tissue reaction.			
Teaching-Learning Process			
Module-3			
Composite Implant Materials: Mechanics of improvement of properties by incorporating different elements. Composite theory of fiber reinforcement, polymers filled with osteogenic fillers (e.g. hydroxyapatite). Host tissue reactions. Bio Compatibility And Toxicological Screening Of Bio Materials: Definition of bio compatibility, blood compatibility and tissue compatibility, toxicity tests, acute and chronic toxicity (in situ implantation, tissue culture, haemolysis, thrombogenic, potential test, systemic toxicity, intracutaneous irritation test), sensitization, carcinogenicity, mutagenicity and special tests.			
Teaching-Learning Process			
Module-4			
Testing Of Bio Materials Implants: In vitro testing (Mechanical testing): tensile, compression, wears, fatigue, corrosion studies and fracture toughness. In vivo testing (animals): biological performance of implants. Exo- vivo testing, standards of implant materials.			

Teaching-Learning Process	
Module-5	
Sterilisation Techniques: ETO, gamma radiation, autoclaving, Effects of Sterilisation on material properties.	
Teaching-Learning Process

Module-1			
Solidification of Casting: Concept of solidification of metals. Homogenous and heterogeneous nucleation. Growth mechanism. Solidification of pure metals and alloys. Mechanism of columnar and dendritic growth. Coring or Segregation. Solidification time and Chvorinov's rule. Concept of progressive and directional solidifications. Principles of Gating and Riser: Purpose of the gating system. Components of the gating System and its functions. Design of the gating System. Different types of gates. Gating ratio and its functions. Definition and functions of the riser. Types of risers and their application. Design of the riser - its shape. Size and location. Use of insulating material and exothermic compounds in risers.			
Teaching-Learning Process			
Module-2			
Design of Casting and Quality Control: Factors to be considered in casting design. Design consideration in pattern making, moulding techniques and core making and assembly. Cooling stresses and hot spots in			
Teaching-Learning Process			
Module-3			
Special casting processes: Investment casting, Die casting, centrifugal casting, full mould casting, vacuum shield casting etc. Industrial melting practices: Aim of melting and melting practices as adopted in case of Cast Irons, Steel, Cu, Al and its alloys.			
Teaching-Learning Process			
Module-4			
Aluminium Foundry Practice:. Copper Alloy Foundry Practice: General characteristics of common cast copper alloys. Melting and casting of copper alloys. Gating and risering of cu-alloy castings.			
Teaching-Learning Process			
Module-5			
Foundry Mechanization and Modernization: Introduction to modernization. Mechanization of foundry and its advantages. Mechanization of sand plant, moulding and core making mechanization in melting, pouring and shakeout units. Material handling equipment"s and conveyor systems. Brief sketches and description of layouts of job. Captive and mechanized foundries.			
Teaching-Learning Process

Skill Development Activities Suggested

-

Course outcome (Course Skill Set)

At the end of the course the student will be able to :

Sl. No.	Description	Blooms Level
CO1	Gain knowledge on Polymers and its processing for different application	
CO2	Identify the potential application of powders and its processing	
CO3	Identify areas where the knowledge of additive manufacturing can be applied through the theoretical studies.	
CO4	Describe portrayal of additive manufacturing and prototyping, their concepts, techniques, recent trends and challenges for the future.	
CO5	Assess the areas where additive manufacturing can make a greater contribution to industrial capabilities	

Program Outcome of this course

Sl. No.	Description	POs

Mapping of COS and POs

Material Characterization Laboratory			
Course Code	MMSTL207	CIE Marks	50
Teaching Hours/Week (L:T:P: S)	01-00-02-0	SEE Marks	50
Credits	2	Exam Hours	3
Course objectives:			
<ul style="list-style-type: none"> • . 			
Sl.NO	Experiments		
	Laboratory to tests based on the mechanical properties of materials, e.g., hardness, elastic modulus, tensile strength etc.		
	Laboratory to tests based on the mechanical properties of materials, e.g., hardness, elastic modulus, tensile strength etc. after various heat treatment processes		
	Applications of metallography and optical microscopy, phase analysis using microscopic information,		
	Laboratory tests on microstructures of metal, ceramic and polymer materials using optical microscopy and SEM.		
	Hands on experience on Phase identification using X-ray Diffraction		
	Study the effect of quenching media on microstructure and hardness of high-speed steels.		
	Establish relationship between hardness and microstructure of forged/rolled/extruded popular aerospace / light alloys.		
	Analysis of metals deformed surface by using image processing technique		
	Demonstration		
	Hands on experience on Powder characterization using XRD, SEM and BET, gas pycnometer		
	Hands on experience on Thermal properties of materials, identification of materials based on their TG, DSC, DMA characteristic responses		
	Sintering and heat treatment furnaces, Thermocouple calibration, Fabrication and testing of composites, Nano-composites, Wear analysis, Welding of stainless steel, studies and experiments on Micro Machining Center, Unconventional machining , Porosity studies, Study of solidification software such as Pro-Cast, computational design of gating system, Commercial CAD/CAM softwares.		
Course outcomes (Course Skill Set):			
At the end of the course the student will be able to:			
<ul style="list-style-type: none"> • . 			

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each course. The student has to secure not less than 40% of maximum marks in the semester-end examination(SEE). In total of CIE and SEE student has to secure 50% maximum marks of the course.

Continuous Internal Evaluation (CIE):

CIE marks for the practical course is **50 Marks**.

The split-up of CIE marks for record/ journal and test are in the ratio **60:40**.

- Each experiment to be evaluated for conduction with observation sheet and record write-up. Rubrics for the evaluation of the journal/write-up for hardware/software experiments designed by the faculty who is handling the laboratory session and is made known to students at the beginning of the practical session.
- Record should contain all the specified experiments in the syllabus and each experiment write-up will be evaluated for 10 marks.
- Total marks scored by the students are scaled down to 30 marks (60% of maximum marks).
- Weightage to be given for neatness and submission of record/write-up on time.
- Department shall conduct 02 tests for 100 marks, the first test shall be conducted after the 8th week of the semester and the second test shall be conducted after the 14th week of the semester.
- In each test, test write-up, conduction of experiment, acceptable result, and procedural knowledge will carry a weightage of 60% and the rest 40% for viva-voce.
- The suitable rubrics can be designed to evaluate each student's performance and learning ability.
- The average of 02 tests is scaled down to **20 marks** (40% of the maximum marks).

The Sum of **scaled-down** marks scored in the report write-up/journal and average marks of two tests is the total CIE marks scored by the student.

Semester End Evaluation (SEE):

SEE marks for the practical course is 50 Marks.

SEE shall be conducted jointly by the two examiners of the same institute, examiners are appointed by the University.

All laboratory experiments are to be included for practical examination.

(Rubrics) Breakup of marks and the instructions printed on the cover page of the answer script to be strictly adhered to by the examiners. **OR** based on the course requirement evaluation rubrics shall be decided jointly by examiners.

Students can pick one question (experiment) from the questions lot prepared by the internal /external examiners jointly.

Evaluation of test write-up/ conduction procedure and result/viva will be conducted jointly by examiners.

General rubrics suggested for SEE are mentioned here, writeup-20%, Conduction procedure

and result in -60%, Viva-voce 20% of maximum marks. SEE for practical shall be evaluated for 100 marks and scored marks shall be scaled down to 50 marks (however, based on course type, rubrics shall be decided by the examiners)

Change of experiment is allowed only once and 10% Marks allotted to the procedure part to be made zero.

The duration of SEE is 03 hours

Ability Enhancement Course

IOT IN MANUFACTURING			
Course Code	MMST258A	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	00:02/01:00	SEE Marks	50
Total Hours of Pedagogy	30/15	Total Marks	100
Credits	01	Exam Hours	03
Course Learning objectives:			
The course is designed to offer fundamentals of IoT in manufacturing and their applications in the business world. Learners will gain deep insights into how smartness is being harnessed and what needs to be done to overcome some of the challenges in the field of Mechanical Engineering			
Module-1			
Introduction to Industrial IoT: IoT background, History and definition, IoT enabling factors, IoT use cases, IoT key technologies, I-IoT – Fourth industrial revolution, use cases of the I-IoT, Similarities and differences of IoT and I-IoT, IoT analytics and AI, Industry environment scenarios covered by I-IoT.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-2			
Understanding the Industrial process and devices: Industrial process, automation in the industrial process, control and measurement systems, types of industrial process, The CIM pyramid, CIM pyramid architecture – devices and networks, CIM network, The I-IoT data flow, The Industrial IoT data flow in a factory, The edge device, The Industrial IoT data flow in the cloud. Industrial data flow and devices, The I-IoT data flow in the factory, Measurement and the actuator chain.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-3			
Understanding of Node MCU: Open Source Microcontroller Platform, Node GPIO Pins, and Basics of Electronics. Introduction to Esp8266, Wifi Network, Web serve. Cloud Servers. IoT Sensors- Temperature, Humidity Sensor, Light, Gyro, Inclination, Magneto, Pressure, Flow, Aqua, Position, vibration and acoustic sensors. Protocol -MQTT Protocol, HTTP vs MQTT, Creating Adafruit account, Using Adafruit to read sensors value and send data to Node MCU			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-4			
Implementing the I-IoT data flow: Discovering OPC, OPC classic, The data model and retrieving, data in OPC classic, OPC UA, The OPC UA information model, OPC UA sessions, OPC UA security model, The OPC UA data exchange, OPC UA notifications, Understanding the I-IoT edge, Features of the edge – edge gateway, edge tools, edge computing, The I-IoT edge architecture, Edge implementations – Azure IoT edge, Green grass, Android IoT, Node red, Docker edge, Intel IoT gateway, Edge Internet protocols.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-5			

Understanding of I-IoT data loggers: Internal architecture of I-IoT data logger, communication protocols, I/O modules (Digital and Analog). Configuring I-IoT data logger through a web based application, Establishing communication between PLC and I-IoT data logger. Interfacing of industrial sensor with I-IoT data logger. Development of cloud based applications for the Mechatronics systems using the I-IoT data logger through web portal.

Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.
----------------------------------	---

Assessment Details (both CIE and SEE)

The weightage of Continuous Internal Evaluation (CIE) is 50% and for Semester End Exam (SEE) is 50%. The minimum passing mark for the CIE is 50% of the maximum marks. Minimum passing marks in SEE is 40% of the maximum marks of SEE. A student shall be deemed to have satisfied the academic requirements and earned the credits allotted to each subject/ course if the student secures not less than 50% (50 marks out of 100) in the sum total of the CIE (Continuous Internal Evaluation) and SEE (Semester End Examination) taken together.

Continuous Internal Evaluation:

1. Two Unit Tests each of **25 Marks**
2. Two assignments each of **25 Marks** or **one Skill Development Activity of 50 marks** to attain the COs and POs

The sum of two tests, two assignments/skill Development Activities, will be **scaled down to 50 marks**

CIE methods /question paper is designed to attain the different levels of Bloom’s taxonomy as per the outcome defined for the course.

Semester-End Examination:

1. The SEE question paper will be set for 100 marks and the marks scored will be proportionately reduced to 50.
2. The question paper will have ten full questions carrying equal marks.
3. Each full question is for 20 marks. There will be two full questions (with a maximum of four sub-questions) from each module.
4. Each full question will have a sub-question covering all the topics under a module.
5. The students will have to answer five full questions, selecting one full question from each module

- <https://youtu.be/De8MQWbhu3k>

Skill Development Activities Suggested

- Individual projects on topics covered in class. Students will choose a real life problems related to the discussed topics and implement the solution by using techniques and strategies discussed in the class. For each project, students have to submit a report and present a seminar.
- Assignments, Quiz and Industrial Visit on relevant topic of the course.

Program Outcome of this course

At the end of the course the student will be able to :

Sl. No.	Description Blooms Level	Blooms Level
CO1	Use IoT Sensors for data logging and communicate the data to cloud	L1
CO2	Use IoT Sensors data in AI & ML	L1
CO3	Automate different process using sensors and control components	L2
CO4	Understand IOT alliances/hardware and standards	L1

Mapping of COS and Pos (Note : High – 3, Medium – 2, and Low – 1)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	3	2	1	2	2	2	2

MICRO MACHINING PROCESSES			
Course Code	MMST258B	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	00:02/01:00	SEE Marks	50
Total Hours of Pedagogy	30/15	Total Marks	100
Credits	01	Exam Hours	03
Course Learning objectives:			
<ul style="list-style-type: none"> • Understand the Micro System design, Material properties, micro fabrication technologies etc. • Study the Microstructure of materials, phase transformations in crystalline solids and smart materials. • Learn about the various processes and special machining's. • Understand the micro-and ultra precision machining. • Awareness on semiconductors manufacturing using micro fabrication technologies. 			
Module-1			
INTRODUCTION: Introduction to Micro System design, Material properties, micro fabrication technologies. Structural behavior, sensing methods, micro scale transport – feedback systems.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-2			
MICROMECHANICS: Microstructure of materials, its connection to molecular structure and its consequences on macroscopic properties – Phase transformations in crystalline solids including martensite, ferroelectric, and diffusional phase transformations, twinning and domain patterns, smart materials.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-3			
BASIC MICRO – FABRICATION: Bulk Processes – Surface Processes – Sacrificial Processes and Bonding Processes– Special machining: Laser beam micro machining – Electrical Discharge Machining – Ultrasonic Machining – Electro chemical Machining, Electron beam machining.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-4			
MECHANICAL MICROMACHINING: Theory of micromachining – Chip formation – Size effect in micromachining – micro turning, micro milling, micro drilling – Micromachining tool design – Precision Grinding – Partial ductile mode grinding – Ultra precision grinding – Binder less wheel – Free form optics.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-5			
SEMICONDUCTORSMANUFACTURING: Basic requirements–clean room–yield model–Wafer IC manufacturing–feature micro fabrication technologies–PSM–IC industry–New Materials–Bonding and layer transfer–devices–micro fabrication industries.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.

MACHINE LEARNING			
Course Code	MMST258D	CIE Marks	50
Teaching Hours/Week (L:P:SDA)	00:02/01:00	SEE Marks	50
Total Hours of Pedagogy	30/15	Total Marks	100
Credits	01	Exam Hours	03
Course Learning objectives:			
To discover patterns in the user data and then make predictions based on these and intricate patterns for Answering business questions and solving business problems.			
Module-1			
Introduction, Concept Learning and Decision Trees Learning Problems – Designing Learning systems, Perspectives and Issues – Concept Learning – Version Spaces and Candidate Elimination Algorithm – Inductive bias – Decision Tree learning – Representation – Algorithm – Heuristic Space Search			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-2			
Neural Networks and Genetic Algorithms: Neural Network Representation – Problems – Perceptron’s – Multilayer Networks and Back Propagation Algorithms – Advanced Topics – Genetic Algorithms – Hypothesis Space Search – Genetic Programming – Models of Evolution and Learning.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-3			
Bayesian and Computational Learning Bayes Theorem – Concept Learning – Maximum Likelihood – Minimum Description Length Principle – Bayes Optimal Classifier – Gibbs Algorithm – Naïve Bayes Classifier– Bayesian Belief Network – EM Algorithm – Probably Learning – Sample Complexity for Finite and Infinite Hypothesis Spaces – Mistake Bound Model			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-4			
Instant Based Learning and Learning Set of Rules: K- Nearest Neighbor Learning – Locally Weighted Regression – Radial Basis Functions – Case-Based Reasoning – Sequential Covering Algorithms – Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction.			
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.		
Module-5			

Analytical Learning and Reinforced Learning: Perfect Domain Theories – Explanation Based Learning – Inductive Analytical Approaches - FOCL Algorithm – Reinforcement Learning – Task – Q-Learning – Temporal Difference Learning	
Teaching-Learning Process	Chalk and talk method and Power Point presentation and YouTube videos, Animation videos, creating right time in classroom discussions. Giving activities & assignments.

Course Outcomes

At the end of the course the student will be able to :

Sl. No.	Description Blooms Level	Blooms Level
CO1	Design the learning system for learning problem with this basic knowledge	L2
CO2	Apply effectively neural networks and genetic algorithms for appropriate applications.	L3
CO3	Apply bayesian techniques for classification problems	L2
CO4	Derive effectively learning rules for appropriate learning systems	L2
CO5	Choose and differentiate reinforcement and analytical learning techniques	L3

Program Outcome of this course

Sl. No.	Description POs	POs
1.	To prepare students to meet the industrial requirements at global level competitiveness.	PO1
2.	To develop the students analytical skills to enable them to understand real world problems and formulate solutions.	PO2
3.	To impart basic education to students in the areas of Design Engineering, Manufacturing Engineering and Thermal Sciences that will enable them to take up higher studies in these areas.	PO3
4.	To allow students to work in teams through group project works and thus help them achieve interpersonal and communication skills.	PO4
5.	To inculcate the habit of lifelong learning, adherence to ethics in profession, concern for environmental and regard for good professional practices.	PO5
6.	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.	PO6
7.	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.	PO7

Mapping of COS and Pos (Note : High – 3, Medium – 2, and Low – 1)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7
CO1	2	3	3	3	2	2	2
CO2	3	3	3	3	3	3	2
CO3	3	3	3	2	2	1	1
CO4	3	3	3	2	2	3	3
CO5	3	3	3	3	3	3	1
