

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 1</b>			
<b>Subject:Pre-Stressed Concrete</b>			
Subject Code	16CIM11	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03
Credit -04			
<b>Course objectives:</b> This course will enable students to <ul style="list-style-type: none"> <li>• Understand basic concepts of prestressing systems and methods;</li> <li>• Understand the different types of losses in prestressing and its assessment</li> <li>• Understand analysis and design of pre-stressed concrete elements (members)</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Introduction: Basic concept of pre-stressing – Advantages of pre-stressed concrete over reinforced concrete – materials for pre-stressed concrete and their characteristics. Uniform prestress distribution in prestressed concrete- non-uniform pre-stress distribution–moments of resistance.			
<b>Module 2</b>			
Systems and methods of pre-stressing- pre-tensioning systems – post tensioning systems – Thermo elastic pre-stressing – chemical pre-stressing. Behavior of pre-stressed concrete beams in flexure: load – deflection curves for pre-stressed concrete beams – Interpreting bending tests – Micro-cracks and visible cracks – Failure.			
<b>Module 3</b>			
Losses in Pre-stress: purpose of assessing losses – counteracting elastic loss-loss of pre-stress In case of non-Uniform pre-stress–creep, shrinkage, relaxation and anchorage losses – friction loss in pre-stress –graphical solution of friction losses– overcoming friction losses.			
<b>Module 4</b>			
Elastic design of sections for flexure: design of a simply supported beam with symmetrical sections of post tensioned and pre-tensioned type- tension members.			
<b>Module 5</b>			
Bearing and anchorage zone: statically indeterminate structure-continuous beams- primary moment – secondary moment- resultant moment.

**SYLLABUS FOR M Tech., Infrastructure Construction and Management**  
**[As per Choice Based Credit System (CBCS) scheme]**  
**SEMESTER – 1**

**Subject: Construction Equipments**

Subject Code	16CIM12	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03

Credit -04

Course objectives: This course will enable students to

1. Understand the various types Quality Management and its importance
2. Understand the importance of safety in construction industry

**Modules**

**Module 1**

Plants and Equipment for production of materials: Crushers, mixers, bituminous mixing plants, concrete mixing plants, advantages, choice, production rate calculation

**Module 2**

Construction Equipment: Operations, applications and performance of dozers, excavators, graders, compactors, pavers, haulers, crawler, wheel tractors, power shovels, Cranes, hauling equipments, drilling, blasting equipments

**Module 3**

Equipment for: Dredging, tunneling, dewatering; Equipment for Flooring-dewatering and floors finishing. Sprayers, kerb casting equipment, screening equipment

**Module 4**

Selection of Construction Equipment: Task considerations, cost considerations, engineering considerations, equipment acquisition options

**Module 5**

Maintenance of Equipment: Repairs, log maintenance, safety during operation, economical life of equipment

**References**

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 1</b>			
<b>Subject:Advances in Concrete Technology</b>			
Subject Code	16CIM13	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03
Credit -04			
Course objectives:			
<ul style="list-style-type: none"> <li>• To understand the properties of ingredients of concrete</li> <li>• To study about the concrete design mix</li> <li>• To study the behavior of concrete at its fresh and hardened state</li> <li>• To understand special concrete and their use</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Properties of Cement - Manufacturing, Types of cement, Testing of Cement, Heat of Hydration , Tests on aggregates - Quality of Water for mixing and curing - use of sea water for mixing concrete			
<b>Module 2</b>			
<b>CHEMICAL AND MINERAL ADMIXTURES :</b> Accelerators – Retarders- Plasticisers- Super plasticizers- Water proofers - Mineral Admixtures like Fly Ash, Silica Fume, Ground Granulated Blast Furnace Slag and Metakaoline -Their effects on concrete properties.			
<b>Module 3</b>			
<b>FRESH AND HARDENED PROPERTIES OF CONCRETE :</b> Workability-Tests for workability of concrete-Slump Test and Compacting factor Test-Segregation and Bleeding-Determination of Compressive and Flexural strength as per BIS - Properties of Hardened concrete-Determination of Compressive and Flexural strength-Stress-strain curve for concrete-Determination of Young's Modulus. Introduction to NDT Techniques.			
<b>Module 4</b>			
<b>PROPORTIONING OF CONCRETE MIX :</b> Principles of Mix Proportioning-Properties of concrete related to Mix Design-Physical properties of materials required for Mix Design - Design Mix and Nominal Mix-BIS Method of Mix Design - Mix Design Examples			
<b>Module 5</b>			
<b>SPECIAL CONCRETES:</b> Light weight concretes - High strength concrete - Fibre reinforced concrete – SCC - High performance concrete- Geopolymer Concrete.			
<b>TEXT BOOKS:</b>			
<ol style="list-style-type: none"> <li>1. Properties of Concrete by A.M.Neville, ELBS publications.</li> <li>2. Concrete Technology by A.K. Santhakumar, Oxford Press.</li> <li>3. Concrete Technology by M.S.Shetty, S.Chand&amp; Co.</li> </ol>

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 1</b>			
<b>Subject: Contract Management</b>			
Subject Code	16CIM14	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03
Credit -04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> <li>• Understand the various types of contracts</li> <li>• Understand the use and effect of contracts in construction industry</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Introduction to contracts: Definitions, Essentials for a legally valid contract, Salient features of contract, Discharging of a contract, Documents for an Engineering Contract; Types of contracts: Classification Based on – Tendering Process, Economic Consideration, Applicability of the various types of contracts in Construction.			
<b>Module 2</b>			
Tendering process: Definitions, List of Documents, EMD, Security Deposit, Invitation for Tenders and sale of Documents, Preparation of Tender Documents and its submission, Receipt of Tender Documents and its opening, Evaluation of Tender and Award of contract – Letter of Award, Letter of Intent, Issues in tendering process: Pre - Registration, Pre – Qualification, Nominated Tendering, Rejection of Tenders, Repeat Orders, Revocation of Tenders, Unbalanced Bidding			
<b>Module 3</b>			
Administration/Performance of contract: Responsibilities (Duties and Liabilities) of Principal & Contractor, Monitoring and Quality control/assurance, Settlement of claims – Advances, Bills, Extension for time, Extras & Variations, Cost Escalations. Security Deposit, Retention Money, Performance Bond, Liquidated Damages, Penalties, Statutory Requirements.			
<b>Module 4</b>			
Breach of contract: Definition and Classification, Common Breaches by – Principal, Contractor, Damage Assessment, Claims for Damages.			
<b>Module 5</b>			
Dispute resolution: General, Methods for dispute resolution – Negotiations, Mediation, Conciliation, Dispute Resolution Boards, Arbitration, Litigation/Adjudication by courts. Conciliation – Appointment of Conciliator, Role of Conciliator, Special Features of Conciliation Dispute Resolution Boards (DRB) – Constitution Of DRB, Functioning of DRB, Procedure for Hearings, Status of Award.

**SYLLABUS FOR M Tech., Infrastructure Construction and Management**  
**[As per Choice Based Credit System (CBCS) scheme]**  
**SEMESTER – 1**

**Subject: Road Projects**

Subject Code	16CIM151 / 16CHT151	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03

Credit -03

**Course objectives:** This course will enable students to

- 1 Prepare project report for new and up-gradation type road works by conducting necessary feasibility/detailed studies.
- 2 Conduct the soil and material investigations to understand their behavior and performance.
- 3 Perform various traffic related studies helping to finalise the project preparations and methods of forecasting traffic data.
- 4 Analyse the social impact of road projects and also determine the economic feasibility analysis for justification of investments.
- 5 Prepare DPR on road projects with relevant drawings and get the knowledge of tendering process for the construction.

**Modules**

**Module 1**

**Introduction:** Various steps of preparation and execution of road projects, Investigations for preparation of project reports for new and up-gradation of roads. Objects and scope of pre-feasibility, feasibility and detailed studies for project preparation. Typical HR structure for preparations and implementation of road projects.  
**Topographic surveys and investigations** for finalisation of horizontal alignment and vertical profile of roads, Application of GIS. Geometric Design elements, standards and specifications for road projects

**Module 2**

**Soil investigations** for assessing the design details of road embankments and cuts, drainage requirements and foundation of cross drainage structures  
**Materials surveys and investigations** for availability and choice of basic and alternate materials for road construction and for soil stabilization.

**Module 3**

**Traffic studies** – classified traffic volume, growth rate, projected traffic for assessing roadway requirements, origin-destination characteristics and studies, Axle load/wheel load studies using weighbridges and analysis of data for pavement design  
**Traffic forecast** – traffic growth estimation from past trends, econometric models. Common methods of traffic forecast

**Module 4**

**Environmental and social impact studies** and assessment relevant to road up-gradation/new projects, Mitigation measures, Road safety audit.  
Collection of relevant data, analysis and interpretation for pre-feasibility and feasibility study reports of the proposed road project. Economic evaluation of different possible alternatives. Preparation of drawings and project reports. Use of software

## **Module 5 Methodologies for Carrying Environmental Impact Assessment**

**Preparation of DPR** design details, estimates, BOQ, drawings and detailed project report, use of software  
**Tendering process**-Preparation of tender documents for different types of road projects, tender evaluation.

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> <b>[As per Choice Based Credit System (CBCS) scheme]</b> <b>SEMESTER – 1</b>			
<b>Subject: Advanced Design of Concrete Structures</b>			
Subject Code	16CIM152	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03
Credit -03			
Course objectives: This course will enable students			
<ul style="list-style-type: none"> <li>• To learn to design the advanced reinforced concrete structures.</li> <li>• To learn to design the miscellaneous RCC structures like deep beams, corbels etc.</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Introduction to the limit state method of design, provisions in the BIS code for different loads to be considered, Introduction to the design and detailing principles of concrete structures as per BIS code.			
<b>Module 2</b>			
Compression Elements - procedure for developing interaction curves for axial loads and moments in one /two directions.			
<b>Module 3</b>			
Behaviour in flexure: Design of singly reinforced rectangular sections, Design of doubly reinforced rectangular sections, Design of flanged beams, Design of shear, Design for Torsion, Limit state of Serviceability: Deflections of Reinforced concrete beams and slabs, short term deflection and long term deflection.			
<b>Module 4</b>			
Limit Analysis of R.C.Structures: Rotation of a plastic hinge, Redistribution of moments, moment rotation characteristics of RC member, I.S. code provisions, applications for fixed and continuous beam. Introduction to Yield line analysis for slabs: Upper bound and lower bound theorems – yield line criterion –Virtual work and equilibrium methods of analysis.			
<b>Module 5</b>			
Design of Reinforced Concrete Deep Beams & Corbels: Steps of Designing Deep Beams, Design by IS 456, Checking for Local Failures, Detailing of Deep Beams, Analysis of Forces in a Corbels, Design Procedure of Corbels as per BIS code.			
<b>References</b>

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> <b>[As per Choice Based Credit System (CBCS) scheme]</b> <b>SEMESTER – 1</b>			
<b>Subject: Introduction to Seismic Resistant Design</b>			
Subject Code	16CIM153	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03
Credit -03			
<p><b>Course objectives:</b> This course will enable students to,</p> <ul style="list-style-type: none"> <li>• Acquire knowledge of fundamentals of structural dynamics</li> <li>• Understand: (a) engineering seismology &amp; (b) concepts for earthquake resistant design</li> <li>• Understand design &amp; detailing aspects to achieve ductility in structures</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Introduction to engineering seismology, plate tectonics, seismic waves, characteristics of earthquake and its quantification – Magnitude and Intensity scales, seismic instruments. Study of response of buildings and structures during past earthquakes.			
<b>Module 2</b>			
Introduction to Theory of Vibration – Single degree of freedom systems, period, frequency, resonance, damping, response spectrum, seismic design philosophy, ductility, base shear calculation by seismic coefficient method (Numerical based on fundamentals only )			
<b>Module 3</b>			
Site planning, building forms, horizontal and vertical irregularities, mass and stiffness irregularities, soft storey effects, Architectural design concepts for earthquake resistance, shear walls, redundancy, setbacks, torsion, pounding – IS 1893 provisions (No Numerical)			
<b>Module 4</b>			
Ductility and energy absorption in buildings, Reinforced concrete for earthquake resistance, confinement of concrete for ductility, ductility of columns and beams – codal provisions – Relevant IS codes			
<b>Module 5</b>			
Behaviour of masonry buildings during earthquakes, failure patterns, strength of masonry in shear and flexure, concepts for earthquake resistant masonry buildings

**SYLLABUS FOR M Tech., Infrastructure Construction and Management**  
**[As per Choice Based Credit System (CBCS) scheme]**  
**SEMESTER – 1**

**Subject: Highway Construction and Maintenance**

Subject Code	16CIM154 / 16CHT14	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03

Credit -03

**Course objectives:** This course will enable students to

1. Understand the various equipment used for road construction and difficulties associated with highway drainage.
2. Select suitable equipment for preparation of subgrade in cutting or filling and also the preparation steps for base and sub base layers.
3. Characteristics of different types of bituminous layers and design of bituminous surfacing along with safety aspects needed for roads.
4. Design the base course thickness and selection of materials as base layer for CC pavements.
5. Analyse the defects in road construction and general pavement failures with remedies

**Modules**

**Module 1**

Components of road and pavement structure including subgrade, drainage system, functions, requirements and sequence of construction operations

**Plants and equipment for production of materials-**

crushers, mixers, bituminous mixing plants, cement concrete mixers – various types, advantages and choice.

**Drainage-**

Assessment of drainage requirements for the road and design of various components, drainage materials, Construction of surface and subsurface drainage system and design of filter materials for roads. Drainage of urban roads, problems.

**Module 2**

**Road construction equipment-**

different types of excavators, graders, soil compactors/rollers, pavers and other equipment for construction of different pavement layers – their uses and choice. Problem on equipment usage charges.

**Pre-construction surveys and marking on ground-**

Specifications and steps for the construction of road formation in embankment and cut, construction steps for subgrade (preparation of subgrade) in cutting, filling and at grade. Construction of subgrade in marshy areas and weak/expansive soils and water-logged areas. Construction steps for granular sub-base, quality control tests

**Module 3**

**Different types of granular base course-**

WMM, CRM, WBM, specifications, construction method and quality control tests.

Different types of bituminous layers for binder and surface courses, their specifications (as per IRC and MORTH), construction method and quality control tests. Special structural courses like stone matrix asphalt and mastic asphalt and construction of porous asphalt.

**Module 4**

**Different types of sub-**

**baseandbasecoursefor cement concrete (CC) pavement and construction method.** Construction of cement concrete (PQC) pavements and joints, quality control during construction. Construction of special cement concrete pavements like interlocking concrete block pavements (ICBP), Continuously reinforced cement concrete pavements (CRCP), Fibre reinforced cement concrete pavements (FRCP), whitetopping, Ultra-thin whitetopping etc.

**General Aspects:** Quality assurance, statistical approach, quality system for road construction. Safety aspects during road construction and maintenance works. Installation of various traffic safety devices and information system Principle of construction planning, application of CPM and PERT (Problems not included)

## Module 5

### Road maintenance works –

day to day and periodic maintenance works of various components of road works and road furniture. Preventive maintenance of road drainage system, pavements and other components of road. Preparation of existing pavement – patching, profile correction, Special measures to deal with reflection cracks in pavement layers, slipperiness of surface, etc. Requirements for rehabilitation, recycling and re-construction.

**Special problems in construction & maintenance of hill roads, landslide, causes, investigation, and preventive and remedial measures, protection of embankment and cut slopes**

<b>Course objectives:</b> This course will enable students to			
<ul style="list-style-type: none"> <li>• Understand the</li> <li>• Understand the</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Basic Design Theory: Comparison of mix design by IS and ACI method, Design of HSC Using ErintroyShaklok Method- Ultra High Strength Concrete. Ferro cement: Introduction, cracking moment and design of Ferro cement elements under tension, construction technique.			
<b>Module 2</b>			
Self-compacting concrete: Introduction, Materials, Mix design of SCC, Fresh and Hardened Properties of SCC, Production and transportation, Formwork, Applications.			
<b>Module 3</b>			
Geo-polymer concrete: Constituents of Geo-polymer Concrete, Mixing, Casting, and Compaction of Geo-polymer Concrete, Curing of Geo-polymer concrete, Design of geo-polymer, short and long term properties of Geo-polymer concrete.			
<b>Module 4</b>			
Recycled concrete: Introduction, properties of recycled aggregate, Methods of recycling and quality, Applications. Pumped concrete: Introduction, Types of concrete pump, Requirements of a concrete for pumping, Effects of aggregates, cement and admixtures on the pumpability of concrete.			
<b>Module 5</b>			
Properties of lightweight concrete: Introduction, Production and properties of No-fines concrete, Production and properties of Aerated and foamed concrete and Production and properties of Lightweight aggregate concrete. Waste Materials in Concrete: Introduction, waste material, waste glass, waste plastic and waste rubber.

**Subject: Construction Costing and Material Management**

Subject Code	16CIM22	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03

Credit -04

**Course objectives:** This course will enable students to

- Understand the various Accounting management techniques for successful completion of Construction projects.
- Understand the effect of material management for project organization

**Modules**

**Module 1**

Management Accounting: Nature and scope of management accounting, cost accounting, financial accounting and its limitation, Break even analysis

**Module 2**

Meaning of fund and fund flow analysis, advantages of fund flow statements, limitation and preparation of fund flow statement and cash flow statement

**Module 3**

Material Management: importance, Integrated material Management, classification of Material, ABC analysis, standardization, purchase management, codification types and its uses

**Module 4**

Price forecasting benefits and its methods: Average method, moving average method, weighted average method, exponential smoothening.

**Module 5**

Inventory Management, Store Accounting: LIFO, FIFO, Average cost and market cost, relevant cost of inventory.

Scope, Meaning and Definition of Construction Project, Project Categories, Characteristics of Project, Project Life Cycle and Phases, Project Management Functions, Roles of Project Manager			
<b>Module 2</b>			
Planning for Construction Projects, Principles of Planning, Objectives, Resource Planning, Scheduling, Productivity chart, Project tracking			
<b>Module 3</b>			
Project Management through Networks, AOA and Precedence Networks, CPM, Pert, Critical Path, Slack, Floats, Probability of completion, Resource smoothing and resource leveling			
<b>Module 4</b>			
Earned Value Management- meaning and definition, Earned value, cost performance index, schedule performance index, cost variances, schedule variance, Final Cost, Final Project Duration			
<b>Module 5</b>			
Crashing of networks, direct cost, Indirect Cost , Normal cost, crash cost, cost-time optimization, Use of application software for Project Management

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> <b>[As per Choice Based Credit System (CBCS) scheme]</b> <b>SEMESTER – 2</b>			
<b>Subject: Pre-Engineered Structures</b>			
Subject Code	16CIM24	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03
Credit - 04			
Course objectives: This course will enable students to			
<ul style="list-style-type: none"> <li>• Understand types and design principles of RC Prefabricated structures and its design principles</li> <li>• Understand method of analysis and design of structural elements</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Types of RC Prefabricated Structures: Long wall and cross wall large panel buildings- One way and two way prefabricated slabs - Framed buildings with partial and curtain walls, single storey industrial buildings with trusses and shells - Crane – Gantry systems.			
<b>Module 2</b>			
Functional Design Principles: Modular coordination – Standardization - Disuniting, Diversity of prefabricates – Production – Transportation – Erection - Stages of loading and codal provisions- Safety factors - Material properties - Deflection control - Lateral load resistance - Location and types of shear walls.			
<b>Module 3</b>			
Floors, Stairs and Roofs: Types of floor slabs – Methods of Analysis and design example of cored and panel types and two-way systems - Staircase slab design - Types of roof slabs and insulation requirements - Description of joints, behavior and requirements - Deflection control for short term and long term loads - Ultimate strength calculations in shear and flexure.			
<b>Module 4</b>			
Walls: Types of wall panels - Blocks of large panels – Curtain partition and load bearing walls Load transfer from floor to wall panels – Vertical loads Eccentricity and stability of wall panels –Use of Design curves -Types of wall joints, their behavior and design – Leak prevention, Joint sealants, sandwich wall panels.			
<b>Module 5</b>			
Industrial Buildings: Components of single storey industrial sheds with crane gantry systems - Design aspects of R.C. Roof Trusses - Roof panels R.C. Crane - Gantry Girders - Corbels and columns and Wind bracing.

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 2</b>			
<b>Subject: Statistics &amp; Numerical Analysis in Construction</b>			
Subject Code	16CIM251	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<b>Course objectives:</b> This course will enable students to			
<ul style="list-style-type: none"> <li>• Develop analytical capability and to impart knowledge in Statistical methods</li> <li>• Utilize knowledge of statistical methods &amp; its applications in real world construction problems</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
<b>Various Statistical Measures:</b> basic probability, sample space, events, axioms of probability conditional probability, independent events. Random variables, continuous/Discrete random variables, expectation, variance, Convenience, conditional distributions, moment generating functions.			
<b>Module 2</b>			
<b>Multiple regressions:</b> Distributions, Bernoulli, Binomial, Poisson, Uniform, Normal, Exponential, Chi-square T and F.			
<b>Module 3</b>			
<b>Sample statistics,</b> empirical distributions, and goodness of fit, sampling from normal populations. <b>Parameter estimation:</b> moment method, maximum likelihood, interval estimated. Hypothesis Testing, Significance Intervals.			
<b>Module 4</b>			
<b>Numerical Methods:</b> Basics: Summary of basic concepts from Linear algebra and numerical analysis, Matrices, Operation counts, Matrix Norms, Type of Errors in Numerical computation.			
<b>Module 5</b>			
<b>Matrix Factorization and Linear System:</b> Cholesky Factorization, QR factorization by House holder matrices LU factorization and Gaussian elimination, partial pivoting, error Analysis (statement of result) solving triangular system by substitution, solving full systems by factorization. LU-factorization for banded and sparse matrices, storage schemes, Iterative Methods, Jacobi, Gauss – Seidal and SOR Iterations, Conjugate gradient method, preconditioning.

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> <b>[As per Choice Based Credit System (CBCS) scheme]</b> <b>SEMESTER – 2</b>			
<b>Subject: Bridge and Grade Separated Structures</b>			
Subject Code	16CIM252 / 16CHT252	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<b>Course objectives:</b> This course will enable students to 1. Understand the 2. Understand the			
<b>Modules</b>			
<b>Module 1</b>			
<b>Geometry</b> -Traffic lane, road way, footpaths, and clearance for vehicles, kerb, crash barrier, parapet, lighting, horizontal and vertical alignment, super-elevation, drainage <b>Substructures:</b> soil exploration techniques. piling methods, pile types, pile testing, Pile concreting.			
<b>Module 2</b>			
<b>Caissons or well foundations:</b> Caisson construction and sinking methods,- bed preparation, supporting structures, excavation method, de-watering for freeing a 'hanging' caisson, pneumatic sinking of caissons, methods of staining and bottom plugging			
<b>Module 3</b>			
<b>Superstructure:</b> Economics of reinforced concrete superstructure, pre-stressed concrete superstructure - composite and steel superstructure, special superstructures. Slab, T-beam and Box girder deck slab construction: Slab type, T-beam and box-girder bridges Decks Construction methods. Span lengths -deck and stiffening system.			
<b>Module 4</b>			
<b>Segmental Construction, Cantilever Construction and Successive Launching:</b> Introduction to Precast segmental construction for long-span bridges- cables and their profiling – deck section - soffit surface -deflection and pre-camber - expansion joint - bearings - aesthetics. Cable-stayed bridge construction - Construction methods - cable configuration - towers – multi span cable stayed bridges - stay tendons - aerodynamic stability.			
<b>Module 5</b>			
<b>Composite Construction:</b> Steel - concrete composite construction - theory of composite structures -Introduction to steel - concrete - steel sandwich construction. <b>RE Panel Structures</b> - Geosynthetics, functions and applications, reinforced retaining walls, construction methods, benefits

[As per Choice Based Credit System (CBCS) scheme] SEMESTER – 2			
<b>Subject: Ground Improvement Techniques</b>			
Subject Code	16CIM253 / 16CHT253	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<p><b>Course objectives:</b> This course will enable students to</p> <ul style="list-style-type: none"> <li>• Introduce the various types of improvement methods of engineering properties soils</li> <li>• Introduce the application of engineering methods to ground improvement projects</li> <li>• Basic knowledge on various ground improvement techniques and their suitability for various types of soil conditions</li> <li>• The skills of implementation of geotechnical knowledge in field situations</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
<p><b>Introduction</b> - Need and objectives of ground improvement, classification of ground modification techniques , trends in ground improvement, Engineering properties of soft, weak and compressible deposits; Principles of treatment;  <b>Methods of compaction:</b> Blasting, dynamic consolidation, pre-compression and compaction piles.</p>			
<b>Module 2</b>			
<p><b>Methods of dewatering:</b> open sumps and ditches, well point system, electro-osmosis, Vacuum dewatering wells; pre-loading without and with sand drains, strip drains and rope drains.  <b>Stabilisation:</b> With admixtures like cement, lime, calcium chloride, fly ash and bitumen. Methods of soil improvement-lime stabilisation and injection; thermal, electrical and chemical methods;</p>			
<b>Module 3</b>			
<p><b>Soil reinforcement:</b> Reinforcing materials, concept of confinement, gabion walls; Dynamic consolidation, Vibroflotation, Pre-consolidation with vertical drains, Granular piles, Soil nailing, Anchors &amp; Thermal methods</p>			
<b>Module 4</b>			
<p><b>Improvement of Foundation Soils</b>  (a) Improvement of granular soils: term used to describe degree of compactness –relative density, density ratio and degree of compaction;  Methods - Vibration at ground surface, factors influencing roller compaction; deep dynamic compaction, vibro-compaction impact at depth.  (b) Improvement of cohesive soils: preloading, or dewatering, methods of installing: sand drains, drain wicks, electrical and thermal methods.</p>			
<b>Module 5</b>			
<p><b>Grouting:</b> Materials of grouting, grouting techniques and control; purpose, functions, types of grouts; soil bentonite - cement mix; Emulsions &amp; solutions; grout injection methods;  Geo-synthetics: types, functions &amp; Classification of geo-textiles. Specific Applications: Bearing capacity improvement, reinforcement, Retaining walls, embankment etc.</p>

**SYLLABUS FOR M Tech., Infrastructure Construction and Management**  
**[As per Choice Based Credit System (CBCS) scheme]**  
**SEMESTER – 2**

Subject: **Building Services & Maintenance**

Subject Code	16CIM254	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<p><b>Course objectives:</b> This course will enable students to</p> <ul style="list-style-type: none"> <li>• Understand the concept of fire resistance in structures</li> <li>• Understand quality policies in the construction industry</li> <li>• Adopt proper maintenance methods for structures</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Standard fire, fire resistance, classification of buildings, means of escape, alarms, etc., provisions of NBC. Engineering services in a building as a system, Lifts, escalators, cold and hot water systems, waste water systems and electrical systems			
<b>Module 2</b>			
Building Maintenance: Preventive and protective maintenance, Scheduled and contingency maintenance planning, M.I.S. for building maintenance. Maintenance standards. Economic maintenance decisions.			
<b>Module 3</b>			
Quality policy in construction industry: Consumer satisfaction, Ergonomics-Time of Completion-Statistical Tolerance-Taguchi's concept of quality.			
<b>Module 4</b>			
Contract and construction programming-Inspectional procedures. Total QA/QC Program and cost implication.			
<b>Module 5</b>			
Different aspects of quality - Appraisals - failure mode analysis, Stability methods and tools, Influence of drawings, detailing, specification, Standardization-Bid preparation. Construction activity, Environmental safety, Social and environmental factors			
<b>Text Books:</b>

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 4</b>			
<b>Subject: Construction Quality &amp; Safety Management</b>			
Subject Code	16CIM41	IA Marks	20
Number of Lecture Hours/week	4	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hour	03
Credit -04			
<b>Course objectives:</b> This course will enable students to			
1. Understand the various types Quality Management and its importance			
2. Understand the importance of safety in construction industry			
<b>Modules</b>			
<b>Module 1</b>			
Evolution of quality management, importance of quality, quality tree, benefits of quality, types of quality, customer driven definitions of quality, quality in production system			
<b>Module 2</b>			
Cost of quality, quality control: objectives of qc, inspection, quality at source, Quality control strategy and policy, Quality Assurance, Quality assurance system, principles of total quality control			
<b>Module 3</b>			
Meaning , definition, uses and drawbacks : Total Quality management, ISO Certification, SIX Sigma, Quality Circles, Causes and Effect Diagram			
<b>Module 4</b>			
<b>Safety in Use of Construction equipments:</b> Human Factors in Construction Safety management Motivation: Management, Supervisors, Workers, Motivational schemes. <b>Safety Management:</b> Role of first line supervisors, Role of middle managers, Role of workers, top management practices, safety audit, Safety in site preparation, Design, safety culture, Top Management, Company Activities and Safety - Safety Personnel - Sub-contractual Obligation - Project Coordination and Safety Procedures			
<b>Module 5</b>			
Safety Procedures for various construction operations: Drilling and Blasting operation, Excavation, storing construction materials Excavation -timbering-scaffolding- safe use of Ladders- safety in welding.

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 4</b>			
<b>Subject: Foundation Technology</b>			
Subject Code	16CIM421	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<b>Course objectives:</b> This course will enable students <ul style="list-style-type: none"> <li>• To learn about types and purposes of different foundation systems and structures.</li> <li>• To provide students with exposure to the systematic methods for designing foundations.</li> <li>• To discuss and evaluate the feasibility of foundation solutions to different types of soil conditions considering the time effect on soil behavior.</li> <li>• To build the necessary theoretical background for design and construction of foundation systems.</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
<b>Bearing Capacity</b> Definition and terms used related to bearing capacity; Bearing capacity theories and empirical methods - Terzaghi's Method, Skempton's analysis for clays, Mayerhof's analysis, BIS Method (IS: 6403) – (Excluding Numerical Problems) Effects of water table fluctuation and eccentric foundation base in calculating ultimate bearing capacity; Test procedure for determination of Bearing Capacity from field tests - Plate Load Test, Standard Penetration Test, Cone Penetration Test: advantages and limitations (excluding numerical problems); Factors influencing Bearing Capacity;			
<b>Module 2</b>			
<b>Shallow Foundations</b> General types of Foundation – Classification and Types; Construction Aspects; Choice of foundation type and Preliminary Selection; Design features and construction details related to size and depth of footing; (numerical problems excluded) Raft Foundations: Common types of Raft foundations; General considerations in design of rafts; construction aspects of raft; (numerical problems excluded) Coefficient of sub-grade reaction – importance, application; Environmental considerations - Frost heave: effects, its causes and prevention;			
<b>Module 3</b>			
<b>Deep Foundations</b> Types of deep foundations – Piles, Piers and Cassions; Piles: Classification of piles – Based on Function – End Bearing, Friction, Tension, Compaction, anchor, fender, sheet, batter, laterally loaded pile etc.; Based on Composition and material – timber, steel, Concrete; Based on Method of installation – Driven, cast-in-situ, driven and castin- situ - Brief details, advantages and disadvantages; Installation of Pile: Equipment for installation of piles by driving and boring, cast in situ place method;			
<b>Module 4</b>			

Pile Capacity: Load transfer mechanism (only concept); Methods of determining ultimate load bearing capacity (only methods; no theoretical aspect / problems); Piles in group – concept of pressure isobars and typical arrangement only; Concept of negative skin friction and uplift capacity of piles (only concept);

Drilled Piers: Types - *Straight-shaft end-bearing piers, Straight-shaft side wall friction piers, Combination of straight shaft side wall friction, Belled or under reamed piers*; Advantages and disadvantages; Methods of Construction – The dry, casing and slurry methods;

Cassions: Introduction, Types – Open, Pneumatic & Floating Cassions – Components, Advantages and disadvantages;

## **Module 5**

### **Soil Stability**

Retaining walls: Introduction, Types of earth retaining structures, Modes of failure of retaining walls, drainage of backfill, Types of earth pressure – Active, passive, earth pressure at rest (only concept, no earth pressure theories); Stability considerations for retaining walls; (numerical problems excluded)

Braced and Un-braced Excavations; Sheet Piles: Introduction, Sheet Pile Structures – Cantilever, anchored, braced sheeting, single cell cofferdams, cellular cofferdams; (only types, numerical problems excluded)

Shoring and Underpinning: Necessity and Methods;

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 4</b>			
<b>Subject: Maintenance and Rehabilitation of Structures</b>			
Subject Code	16CIM422	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<p><b>Course objectives:</b> This course will enable students to</p> <ul style="list-style-type: none"> <li>• Learning the structural properties for causing failures</li> <li>• Identification of failure phenomenon</li> <li>• New approach in the design aspects</li> <li>• Understanding the concept of serviceability and durability</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
<p>Maintenance, repair and rehabilitation: Facets of maintenance- Assessment procedure for evaluating a damaged structure –Inspections, study of soil report, existing as built drawings, variation in design loads etc.</p> <p>Causes of distress- foundation, floor, walls, roof etc. Durability of materials - types of problems in components such as foundations, roofs, floors, walls, etc - safety evaluation of existing structures -failure patterns and controls. Causes of Deterioration, preventive measurements and maintenance; Principles of assessment of existing structures.</p>			
<b>Module 2</b>			
<p>Investigation and Diagnosis: General Considerations - Observation - Questioning - Characteristics of materials; Diagnosis of construction failures;</p> <p>Field and Laboratory Testing - Destructive Testing - Non-Destructive Testing – Rebound Hammer - Ultrasonic Pulse Velocity - Pachometer -Semi-Destructive Testing - Probe Test - Pull- Out Test - Pull-Off Test - Break-Off Test - Core Test - Half-Cell Potential Measurements - Resistivity Measurements - Carbonation Depth Testing - Tests for determining cement content, chloride content and sulphate content.</p>			
<b>Module 3</b>			
<p>Repair Materials: Dealing with cracks; Methods of repair in concrete, Steel and timber structural components; Corrosion damage of reinforced concrete and its repair and prevention measures; Corrosion of steel reinforcement: Factors influencing corrosion - corrosion protection of steel structure - masonry deterioration.</p> <p>Surface deterioration, Efflorescence, causes, prevention and protection;</p>			
<b>Module 4</b>			
<p>Surface coatings and painting; Water proofing; Grouting; Strengthening of existing structures; Special repairs, maintenance, Inspection and planning. Budgeting and management. Patching Materials - Resurfacing Materials - Sealing Materials - Water-Proofing Materials - Admixtures - Substrate Preparation.</p> <p>Refurbishment and Protection Techniques - Routing and Sealing - Stitching - External Stressing - Resin Injection - Grouting - Blanketing -Overlays - Sprayed Concrete - Prepacked Concrete - Dry packing - Jacketing - Plate Bonding -Protective Coatings - Autogenous Healing – Vacuum Impregnation - Chloride Extraction - Cathodic Protection.</p>			

**Module 5**

Maintenance: Bridge maintenance techniques-factors affecting deterioration of dams, detection methods, remedial measures Maintenance of various buildings and structures – Components of pavement management system – pavement maintenance measures – pavement preservation techniques.

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 4</b>			
<b>Subject: Construction Demolition and Waste Management</b>			
Subject Code	16CIM423	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<b>Course objectives:</b> This course will enable students to			
<ul style="list-style-type: none"> <li>• Focus on the principles of sustainable construction and demolition waste management and resource efficiency</li> <li>• Examining the environmental impact of building materials;</li> <li>• Formulating and designing pre–construction and site waste management plans</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
Environmental Impact of Building Materials Embodied energy of materials; impact on the local environment; toxicity of the material; life cycle assessment. Nature and Source Direct and indirect waste; site types and origins; composition; quantity; current recycling/reuse potential of building materials.			
<b>Module 2</b>			
Construction and Demolition Waste Management Plans International good practice; planning requirements; DoEHLG guidance document; company policy; demolition plans; site implementation; supplier agreements; sub–contractor management; role of waste management contractor; training; auditing; skip management; current markets; current disposal options; health and safety; reporting to local authorities. Treatment of Construction and Demolition Waste, waste permits; waste licenses; waste transfer facilities; landfills; treatment technologies; hazardous waste facilities; reporting to EPA			
<b>Module 3</b>			
Designing for Waste Prevention and Minimisation Waste prevention and minimization; client, contractor and designer attitudes; proper maintenance of existing buildings; reuse of existing building structure; design flexibility; design for reuse and recycling; dimensional co–ordination and standardization; modular design; material selection and control.			
<b>Module 4</b>			
Waste Forecasting Tools Application of WRAP's designing out waste tool for buildings and civil engineering; WRAP net waste tool; BRE SMARTWaste; WRAP Site Waste Management Plan Tracker			
<b>Module 5</b>			
Future developments Potential future markets; 'smart' materials; use of eco–materials.

<b>SYLLABUS FOR M Tech., Infrastructure Construction and Management</b> [As per Choice Based Credit System (CBCS) scheme] <b>SEMESTER – 4</b>			
<b>Subject: Sustainable Constructions</b>			
Subject Code	16CIM424	IA Marks	20
Number of Lecture Hours/week	3	Exam Marks	80
Total Number of Lecture Hours	38	Exam Hour	03
Credit -03			
<b>Course objectives:</b> This course will enable students to <ul style="list-style-type: none"> <li>• Demonstrate competent knowledge of Sustainability, their potentials, their relation, pros and cons;</li> <li>• Identify specific actions that can be taken to conserve energy and to promote the development and use of renewable energy;</li> </ul>			
<b>Modules</b>			
<b>Module 1</b>			
<b>Sustainable Construction Materials</b> - Marginal materials, recycled materials, design aspects, construction practices using non-conventional materials and methods, milling and recycling techniques			
<b>Module 2</b>			
<b>Energy Savings in Construction</b> - Fundamentals of energy - Energy production systems, Energy and resource conservation, Energy efficient design strategies, Renewable energy sources – advantages and disadvantages; Energy management and conservation: electrical equipment - Improvement of power factor -maximum energy demand			
<b>Module 3</b>			
Energy savings in electrical appliances used in buildings (pumps, fans, Compressed air systems, lighting systems, Air conditioning systems): Energy in building materials, energy efficient and environment friendly building: Thermal comfort and solar radiations			
<b>Module 4</b>			
Green building rating system: Introduction to IGBC and LEED rating systems – various criteria for building rating			
<b>Module 5</b>			
<b>Pollutions and Management:</b> air, water, noise pollutions and reduction measures during planning, design and construction;
