

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – I

**Subject: Advanced Computational methods and Numerical Analysis**

Subject Code	16CWM11	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Know various concepts on mathematical aspects.
- Gain the knowledge on Optimization techniques.
- Study on Statistical operational system using mathematical systems.

Modules	Teaching Hours
---------	----------------

**Module - 1**

**Numerical Methods:** Partial differential equation, Newton Raphson Method, Finite Difference, Finite element, method of characteristics, different methods, successive over relaxation method.

**Optimization:** Classification and Importance in Environmental studies. Single and multivariable optimization without and with constraints.

**10 Hours**

**Module - 2**

**Linear Programming:** Different methods, linear approximation of non-linear optimization.

**Statistics:** Significance test, Frequency distribution, characteristics of distribution, Method of least squares and regression, Multiple regression.

**10 Hours**

**Module - 3**

**Applied Partial Differential Equations:** Classification of second order partial differential equations, Canonical forms - Hyperbolic, Parabolic, Elliptical Equations.

**Laplace Transform Method:** Transforms of derivatives, Differential equations and simultaneous equations. Transform of Dirac Delta function, Inverse Transform - examples.

**Fourier Transform Method:** Properties of Fourier Transforms, Sine and Cosine Fourier Transforms.

**10 Hours**

**Module - 4**

**Probability Theory:** Review of basic probability theory. Definition of random variables and probability distribution, Probability mass and density function, expectation, moments, central moments, characteristic functions, probability generating and moment generating functions - illustrations. Binomial, Poisson, Exponential, Gaussian and Rayleigh distribution examples.

**10 Hours**

**Module – 5**

**Joint Probability Distribution:** Definition and properties of CDF, PDF, PMF, conditional distributions. Expectation, covariance and Correlation. Independent Random variables, statement of central limit theorem - illustrative examples. Random Process: Classification, stationary and ergodic random process. Auto correlation function properties, Gaussian random process.

**10 Hours****Course outcomes:**

During this course, students will be trained :

- To understand the role and importance of mathematical modelling.
- Knowledge about applications of evaluated results from projects.
- Significance of Statistical and Numerical analysis.

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

- Ross S.M.,(1987) “**Introduction to Probability and Statistics for Engineers and Scientists**”, John Wiley Publications.3<sup>rd</sup> Edition, Academic press.
- Kreyszig Erwin(2006),9<sup>th</sup> Edition” **Advanced Engineering Mathematics**”, Wiley Eastern Publications.
- Berthouex P M.,and Brown L. C.(1994), “**Statistics for Environmental Engineers**”, Liske publication, 2<sup>nd</sup> Edition.

**Reference Books:**

- Rao. S.S.(1979) Optimization: Theory & Applications Techniques, Wiley Eastern Ltd, New Delhi.
- Taha H.A.,(2007), “Optimization Research”:An introduction, Pearson Prentice Hall, 8<sup>th</sup> Edition

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

**Subject: Aquatic Chemistry and Microbiology**

Subject Code	16CWM12	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Know the Importance of Microorganisms in environment and their role.
- Observe and understand about microscopy, Bacteria, Algae, Fungi.
- To impart the knowledge of Control and Measurement of microorganism.
- Observe and understand the fundamentals of Physical Chemistry, Trace contaminants and their Analysis
- Know the importance of pH, Colorimetry, water softening, DO.

Modules	Teaching Hours
<b>Module - 1</b>	
<b>Microbiology</b> - Importance of Microorganisms in air, water and soil environment. Difference between Prokaryotic and Eukaryotic cells. Principles and applications of microscopy – Bright field, Dark field, Fluoresce, TEM, SEM. Metabolism and metabolic pathways (Meaning and Importance).	<b>10 Hours</b>
<b>Module - 2</b>	
<b>Bacteria</b> – Morphology, typical growth curve and generation time, classification and their importance. <b>Algae</b> - Morphology, classification and their importance. <b>Fungi</b> - Morphology, classification and their importance. <b>Protozoa</b> - Morphology, classification and their importance. <b>Enzymes</b> - classification, factors influencing enzyme reaction, Derivation of Michaelis – Menten equation.	<b>10 Hours</b>
<b>Module - 3</b>	
<b>Control &amp; Measurement of Microorganisms</b> – Physical agents, chemicals agents (Types and Importance in brief). Measurement Techniques - APC, MPN, MFT. Microbiology of Domestic water and wastewater. Eutrophication of lakes. Bioconcentration, Biomagnification and Bioaccumulation.	<b>10 Hours</b>
<b>Module - 4</b>	
<b>Introduction to Fundamental Chemistry</b> - Importance of environmental Chemistry. Toxic chemicals, Heavy metals and effects, Electrochemistry and its applications. <b>pH</b> – Principle, Measurement, Numerical Examples, Buffers and Buffer index. <b>Colourimetry</b> – Principles and applications. <b>Dissolved Oxygen</b> – Environmental Significance, methods of determining DO, DO membrane probes, problems.	<b>10 Hours</b>

<b>Module – 5</b>	
<p><b>Water Softening</b> - Causes and Sources of hardness, types of hardness, methods of determination, public health significance, problems.</p> <p><b>Instrumental methods of analysis of pollutants</b> – Infrared Spectroscopy, Atomic Emission Spectroscopy, Atomic Absorption Spectroscopy, Fluorimetry, Gas Chromatography, HPLC.</p>	<b>10 Hours</b>
<p><b>Course outcomes:</b>  During this course, students will be trained :</p> <ul style="list-style-type: none"> <li>• To understand the role and importance of microorganisms in environment.</li> <li>• Understand the basics of microscopy, Bacteria, Algae, Fungi.</li> <li>• Learn the Control and Measurement of microorganism.</li> <li>• To evaluate the effects of toxic chemicals, heavy metals etc.</li> <li>• Achieve knowledge about pH, Colorimetry, water softening, DO.</li> </ul>	
<p><b>Question paper pattern:</b></p> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<p><b>Text Books:</b></p> <ol style="list-style-type: none"> <li>1. Sawyer C.N. and McCarty, P.L ., (2003), “<b>Chemistry for Environmental Engineering and Science</b>”, 5th Edition, Tata McGraw Hill Publishing Co. Ltd., New Delhi.</li> <li>2. **SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – I

**Subject: Advanced Waste Water Treatment Technology**

Subject Code	16CWM13	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

- Course objectives:** This course will enable students to
- To understand the basic characteristics of wastewater.
  - Understanding the kinetics of biological system.
  - Understand the design and working principle of various treatment methods.
  - Understand magnitude and influence of hazardous content.

Modules	Teaching Hours
<b>Module - 1</b>	
<b>Objectives of wastewater treatment</b> , characteristics, flow variations, types of reactors and reactors analysis. Wastewater Treatment Flow Diagrams and Hydraulic Profile. <b>Theoretical principles and design considerations</b> - screens, equalization basin, grit chamber, primary and secondary settling tanks.	<b>10 Hours</b>
<b>Module - 2</b>	
<b>Wastewater treatment</b> – aerobic, anaerobic, suspended and attached growth systems. <b>Kinetics of biological treatment systems</b> – Biokinetic constants and their determination, batch and continuous systems	<b>10 Hours</b>
<b>Module - 3</b>	
<b>Theoretical principles and design considerations</b> – suspended growth system - conventional activated sludge process and its modifications. <b>Theoretical principles and design considerations</b> – attached growth system – trickling filter, bio-towers and rotating biological contactors. Principles and design of stabilization ponds.	<b>10 Hours</b>
<b>Module - 4</b>	
<b>Sludge Processing</b> – separation - sludge thickeners, volume reduction, conditioning and digestion – aerobic and anaerobic. Nitrification and De-nitrification Processes, Phosphorous removal. Wastewater disinfection.	<b>10 Hours</b>

<b>Module – 5</b>	
<p><b>Microbial Treatment</b> - Degradation of high concentrated toxic pollutants, non-halogenated, halogenated petroleum hydrocarbons metals.</p> <p><b>Rural wastewater systems</b> – Septic tanks, two-pit latrines, Ecotoilet, soak pits.</p>	<b>10 Hours</b>
<p><b>Course outcomes:</b>  During this course, students will be trained :</p> <ul style="list-style-type: none"> <li>• To know the basic characteristics of wastewater and the kinetics of biological system.</li> <li>• Understand the design and working principle of various treatment methods.</li> </ul>	
<p><b>Question paper pattern:</b></p> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<p><b>Text Books:</b></p> <ul style="list-style-type: none"> <li>• “Wastewater Engineering - Treatment and Reuse”, Metcalf and Eddy Inc., (2003), 4th Edition, Tata McGraw Hill Publishing Co. Ltd., New Delhi.</li> <li>• “Wastewater Treatment Concepts and Design Approach”, Karia G.L., and Christian R.A., (2001), Prentice Hall of India Pvt. Ltd., New Delhi.</li> </ul>	
<p><b>Reference Books:</b></p> <ul style="list-style-type: none"> <li>• Fair G.M., Geyer J.G and Okun, “<b>Water-wastewater Engineering</b>”.</li> <li>• “Wastewater Engineering - Treatment and Reuse”, Metcalf and Eddy Inc., (2003), 4th Edition, Tata McGraw Hill Publishing Co. Ltd., New Delhi.</li> </ul>	

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – I

**Subject: Water Treatment Technology**

Subject Code	16CWM14	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Gain the Knowledge on Sources of water, Importance of water quality and its Standards for usage.
- To understand about objectives of water treatment.
- Understand the design and operation of a Water treatment system.
- Understand about the purification process like, Sedimentation, Coagulation, Filtration and softening methodologies involved before supplying to Public.

<b>Modules</b>	<b>Teaching Hours</b>
<b>Module - 1</b>	
<b>Introduction</b> – Sources of water, Importance of water quality and standards. Objectives of Water treatment. Flow chart on overall water supply project, Unit diagrams on water treatment systems. Suitability of Intake Structures.	<b>10 Hours</b>
<b>Module – 2</b>	
<b>Treatment Operations</b> – Gas transfer two film theory- Water in air system and Air in water system. Types of Aeration and limitations. Principles of Sedimentation. Design criteria and design of Sedimentation tanks.	<b>10 Hours</b>
<b>Module – 3</b>	
<b>Coagulation and Flocculation-</b> Theory of Coagulation. Types of Coagulants, reactions, Coagulant Aids, Determination of Optimum dose of Coagulants. Design Criteria and numerical problems on estimation of coagulants.	<b>10 Hours</b>
<b>Module – 4</b>	
<b>Filtration</b> – Theory of Filtration, types of filters used in treatment plant, Hydraulics of Filter bed. Design criteria and Design of Filters, Filter Back wash, Operational troubles and trouble shooting. Water disinfection, methodologies. theory of disinfection, Chemistry of Chlorination and Break Point Chlorination.	<b>10 Hours</b>
<b>Module – 5</b>	
<b>Water Softening</b> - Ions causing Hardness, Degree of Hardness, Removal techniques, Problems associated with	<b>10 Hours</b>

<p>hardness. Fluoridation and De-fluoridation techniques. Special requirements of Industrial water supply. Rural water supply systems. Rain water Harvesting processes and utilization.</p>	
<p><b>Course outcomes:</b>  During this course, students will be trained :</p> <ul style="list-style-type: none"> <li>• To understand the roll and importance of drinking water Quality and control of water borne diseases.</li> <li>• Transmission of Various diseases in Urban and Rural Community.</li> <li>• By knowing the Objectives and importance of treatment of water, can judge the standards of water before supplying to a community.</li> <li>• To understand the Dynamics of Water treatment and type of treatment required with respect to water quality.</li> <li>• Gaining the knowledge on water softening methods and utilization of water through Rain water harvesting process.</li> </ul>	
<p><b>Question paper pattern:</b></p> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<p><b>Text Books:</b></p> <ul style="list-style-type: none"> <li>• Fair, G.M., Geyer J.C and Okun, (1969) “<b>Water and Waste water Engineering</b>” Vol II, John Wiley Publications.</li> <li>• Weber W.J., (1975) “<b>Physico - Chemical Processes for Water Quality Control</b>”.</li> <li>• AWWA, (1971), “<b>Water Quality and Treatment</b> “McGraw Hill.</li> <li>• CPHEEO Manual, (1991), “<b>Water Supply and Treatment</b>”, GO Publications.</li> </ul>	
<p><b>Reference Books:</b></p> <ul style="list-style-type: none"> <li>• Peavy, H.S., Rowe and Tchobonoglous,G., (1985), “<b>Environmental Engineering</b>”, McGraw Hill</li> <li>• Viessman Jr, Hammer J. M, Perez, E.M, and Chadik, P. A, <b>Water Supply and Pollution Control</b>, PHI Learning, New Delhi, 2009</li> <li>• Howard S. Peavy, Donald R. Rowe and George Tchobanoglous, <b>Environmental Engineering</b>, McGraw Hill., 1984</li> </ul>	

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – I

**Subject: Environmental Pollutions and Control Management**

Subject Code	16CWM151	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- To understand the types of the pollutions.
- To understand the monitoring and assessing the impact of Pollutants.

Modules	Teaching Hours
<b>Module - 1</b>	
<p><b>Introduction:</b> Definition and sources of pollution, different types of pollution and their global, regional and local effects.</p> <p><b>Air Pollution:</b> Types and sources of air pollutants; Reaction of pollutants in air forming Smog, PAN, Acid rain; Atmospheric Diffusion and Plume Behaviour, Effects of air pollutants on plants.</p>	<b>10 Hours</b>
<b>Module – 2</b>	
<p><b>Water Pollution:</b> Sources of water and their contamination, Types of pollutants, Industrial effluents- pulp and paper mills, Sugar, Distillery, Domestic wastes, Effluents from water treatment plants. Eutrophication – causes, effects and control measures.</p> <p><b>Soil pollution:</b> Plants as soil pollution indicators, Formation of salts in soils, Causes of soil pollution, Effects of Fungicides and weedicides on soil components and pollution. Different kinds of synthetic fertilizers (N, P, K), their toxicity and Environmental effects, control of soil pollution.</p>	<b>10 Hours</b>
<b>Module – 3</b>	
<p><b>Radioactive Pollution:</b> Types of radiations (Alpha, Beta, Gamma), Units of radioactivity, Sources of radioactive material in environment, Biological impact and health hazards associated with radiation, control of Radioactive pollution. Fate and movement of radioactive material in environment.</p> <p><b>Heavy Metal Pollution:</b> Sources of heavy metals, Accumulation of heavy metals in abiotic environment and biotic components, Bioaccumulation, Biomagnification, Toxic effects (Lead, Mercury, Arsenic).</p>	<b>10 Hours</b>
<b>Module – 4</b>	
<p><b>Noise Pollution:</b> Basic properties of sound, Units, Sources of Noise Pollution, Effects of noise pollution, Measurement of sound. Measures to control noise pollution in industries - automotive type silencers, vibration isolation, damping,</p>	<b>10 Hours</b>

lagging. Protection of personnel – ear plugs, ear muffs, helmets, isolation. <b>Thermal pollution:</b> Definition and Sources, effects of thermal pollution – physical, chemical, biological, control of thermal pollution.	
<b>Module – 5</b>	
<b>Oil pollution:</b> introduction, major oil spills in the world, fate and movement of oil after spillage - spreading, evaporation, emulsification, dispersion, dissolution, sedimentation, biodegradation. Effects and control of oil pollution, Remote sensing in water quality monitoring.	<b>10 Hours</b>
<b>Course outcomes:</b> During this course, students will be trained : <ul style="list-style-type: none"> <li>• Estimate amount of pollutant by different agencies in different medium.</li> </ul>	
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<b>Text Books:</b> <ol style="list-style-type: none"> <li>1. S.S.Dara, <b>Environmental Chemistry and Pollution Control</b>, S. Chand and Co Ltd., New Delhi.</li> <li>2. Environmental. Protection and <b>Pollution Control Manual</b> – Karnataka State Pollution Central Board.</li> <li>3. B.K. Sharma, and H. Kaur, <b>Environmental Chemistry</b>.</li> </ol>	
<b>Reference Books:</b> <ol style="list-style-type: none"> <li>1. Handbook of <b>Environmental Health and Safety</b> – principle and practices , Vol. II.</li> </ol>	

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – I

**Subject: Renewable & Alternative Fuels**

Subject Code	16CWM152	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Create awareness in students about problems related to fossil fuels and familiarity about alternative fuels.
- Teach combustion and emission characteristics of various gaseous and liquid alternative fuels.
- Understand adaptability of engines to alternative fuels.

Modules	Teaching Hours
---------	----------------

**Module - 1**

Introduction to energy and resources – Renewable energy sources - Availability of solar energy – Sun-earth relationships - - Solar radiation measurement – Flat plate collectors – Solar water heating systems – Evacuated Tubular Concentrators - Solar air heating systems and applications – Concepts on solar drying, cooking, desalination, solar ponds and solar cooling - Passive heating and cooling of buildings – Basics of solar concentrators and types Solar thermal power generation.	<b>10 Hours</b>
---	-----------------

**Module – 2**

Biomass to energy conversion processes – Anaerobic digestion, process parameters, biogas composition, digester types, high rate anaerobic conversion systems – Alcohol from biomass – Biodiesel: preparation, characteristics and application - Biomass combustion and power generation – Briquetting – Gasification: Process, types of gasifiers, applications – Waste to energy technologies.	<b>10 Hours</b>
---	-----------------

**Module – 3**

Power in the wind - Types of wind mills – WEG components, Power curves and energy estimation– Indian wind potential. Small Hydro Power: Types, site identification, head and flow measurement, discharge curve, estimation of power potential and system components. Technologies for harnessing renewable energy sources like geothermal, wave, tidal and ocean thermal energy.	<b>10 Hours</b>
--	-----------------

**Module – 4**

Fossil fuels and their availability - Potential alternative liquid and gaseous fuels - Merits and demerits of various alternative fuels - Engine requirements Methods of production - Properties - Blends of gasoline and alcohol - Performance in	<b>10 Hours</b>
--	-----------------

<p>SI engines – Adaptability - Combustion and emission characteristics - Performance in CI engines - Emission characteristics - Properties of alcohol esters Production and properties of CNG, LPG, hydrogen gas, biogas and producer gas - Performance and Storage, distribution and safety aspects.</p>	
<p><b>Module – 5</b></p>	
<p>Various vegetables oils - Properties - Esterification - Performance and emission characteristics - Bio-diesel: Feed stock, characteristics, preparation (lab and commercial), storage, applications, environmental impacts, economics, policy.</p>	<p><b>10 Hours</b></p>
<p><b>Course outcomes:</b>  During this course, students will be trained :</p> <ul style="list-style-type: none"> <li>• Learn need for alternative fuels</li> <li>• Learn sources of various alternative flues</li> <li>• An understanding limitation of fossil fuels and combustion characteristics fuels</li> </ul>	
<p><b>Question paper pattern:</b></p> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<p><b>Text Books:</b></p> <ul style="list-style-type: none"> <li>• Frank Kreith and D.Yogi Goswami (2007), Handbook of Energy Efficiency and Renewable Energy, CRC Press.</li> <li>• John Twidell and Tony Weir (2006), Renewable Energy Resources, 2nd Edition, Taylor &amp; Francis, USA.</li> <li>• John A. Duffie and William A. Beckman (2006),</li> </ul>	
<p><b>Reference Books:</b></p> <ul style="list-style-type: none"> <li>• Solar Engineering of Thermal Process, 3rd Edition, John Wiley &amp; Sons.</li> <li>• Gilbert M. Masters (2004), Renewable and Efficient Electric Power Systems, Wiley Interscience.</li> <li>• Osamu Hirao and Richard Pefley (1988), Present and Future Automotive Fuels, Wiley Interscience Publication, New York</li> <li>• Alcohols and Motor Fuels: Progress in Technology - Series No. 19 - SAE Publication USA</li> </ul>	

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – I

**Subject: Community Health Science and Environmental Sanitation**

Subject Code	16CWM153	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Know the outburst of diseases in rural and urban areas.
- Understand the behaviour of pathogens and Transmission of Diseases.
- To know about the prevention of Communicable diseases and Risk Approach.

Modules	Teaching Hours
<b>Module - 1</b>	
<p><b>Introduction:</b> Concept of Health, Communicable Diseases; Terminology, classification, Methods of communication, general methods and control .</p> <p><b>Community Health and Sanitation :</b> Importance of Community Health , Environmental Sanitation , Rural and urban sanitation , Classification of Health- WHO ,Physical, Mental, Social Health Science . Responsibility for Health.</p>	<b>10 Hours</b>
<b>Module – 2</b>	
<p><b>Concept of Diseases and Prevention :</b> Spectrum of Disease , Concept of prevention and Levels . preventive and Social medicine . Community medicine .Risk Approach.</p> <p><b>Principles of Epidemiology :</b> Epidemiology and Aims of Epidemiology , Basic measurements, Common Sources of Epidemics and Control measures, Uses of Epidemiology.</p>	<b>10 Hours</b>
<b>Module – 3</b>	
<p><b>Dynamics of Disease Transmission:</b> Sources and Reservoirs :Human ,Animal and non Living things Routes of Transmission, Classification of Immunity Agents.</p>	<b>10 Hours</b>
<b>Module – 4</b>	
<p><b>Disease Prevention and Control:</b> Source of Infection ,Routes of Transmission , Immunization Cholera , Typhoid ,Yellow Fever, Disinfection and Types . Environmental factors.</p> <p><b>Insect Control :</b> House fly and Mosquito – Life cycle disease Transmission and control measures.</p>	<b>10 Hours</b>
<b>Module – 5</b>	
<p><b>Food and Milk Sanitation and Environmental Administration :</b> Food Poisoning ,Types , Prevention and Control .Essentials and Test for milk quality , Pasteurization ,Cattle Born Diseases</p> <p><b>Health Care System</b> at National level and Principles .</p>	<b>10 Hours</b>

**Course outcomes:**

During this course, students will be trained :

- To understand the roll and importance of Waste management and Transmission of Various diseases in Urban and Rural Community.
- To understand the Dynamics of Disease Transmission.
- Control and remedial measures to maintain good Sanitation.
- Knowledge about water, wastewater and Solid waste management and Environmental administration.

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

- Joseph .A. Salvato, by Environmental Sanitation.
- E.W. Steel , Water Supply and Sanitary Engineering,

**Reference Books:**

- **J.E. Park and K. Park**, Preventive and Social medicine, M/S. Banarsidas Bhanot Publications.
- **P.K. Goel**, Water Pollution Causes, Effects and Control, New Age International (Pvt.) Ltd

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – I

**Subject: Remote Sensing and GIS in Environmental Engineering**

Subject Code	16CWM154	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Understand the fundamentals of remote sensing
- observe and process the GPS data
- use the image processing for the outburst of diseases.

Modules	Teaching Hours
---------	----------------

**Module - 1**

<b>Fundamentals of Remote Sensing:</b> Definition, Physics of remote Sensing, Electromagnetic. Radiation and its interactions with atmosphere, Spectral reflectance of earth features, Resolution Spectral, Temporal and Radiometric.	<b>10 Hours</b>
---	-----------------

**Module – 2**

<b>Platforms Sensors and Image Processing:</b> Aerial Photographs, Active and passive sensors, Data products, Various satellites in orbit and their sensors, Image Processing-Visual and digital image, Interpretation, Interrelation keys, Methodology, Training sets, Ground truth verification, Image analysis, Image enhancement, Rectification, Classification methods, Users accuracy, Producers accuracy and overall accuracy.	<b>10 Hours</b>
---	-----------------

**Module – 3**

<b>Introduction to GIS:</b> Data entry, storage and maintenances, Data outputs. Data analysis, Hardware and Software	<b>10 Hours</b>
--	-----------------

**Module – 4**

<b>Application of Remote Sensing and GIS:</b> Applications of remotely sensed data for identifying solid waste disposal, forest fire mapping, EIA studies etc, Optimal routing if solid waste using GIS-Case study, Environmental sitting of industries and zoning atlas development.	<b>10 Hours</b>
---	-----------------

**Module – 5**

Remodeling of water distribution system using GIS, Environmental degradation assessment using RS and GIS.	<b>10 Hours</b>
---	-----------------

**Course outcomes:**

During this course, students will be trained :

- analyze the data and model the distribution network
- analyze the satellite images for epidemic studies

**Question paper pattern:**

- The question paper will have ten questions.

- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

- Manual of Remote sensing - Ed: Robert G Reeves.
- Theory of pattern recognition and modern forecasting - V.Karpin and Wright Pattern
- Digital Remote Sensing - Pritivish Nag M Kudrat ; Concept publication
- Principles of GIS for land and resources assessment, Burrough, P.A., 1986, Oxford.

**Reference Books:**

- Geographical information systems Vol 1 & 2. Edited by: Paul A.Longley, Michael F.Goodchild, David J. Maguire & David W.Rhind.
- Geographical information systems and digital image processing – Muralikrishna1999. Allied Publication

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – I

**Subject: Environmental Laboratory 1**

Subject Code	16CWML16	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	42	Exam Hours	03

CREDITS – 02

**Course objectives:** This course will enable students to

- The objective of this course is to make students to learn principles and design of experiments.
- To investigate the performance of various bacteria and fungi

Modules	Teaching Hours
---------	----------------

**Module -1**

1. Media preparation, preparations of plates and tubes. 2. Isolation of bacteria and fungi from wastewater. 3. Enumeration of microbes by colony count and hemocytometer. 4. Gram staining, capsule staining, differential staining and motility test. 5. Biochemical Tests for characterization of microbes. 6. Preservation of cultures. 7. Batch and Fed batch culture studies.	<b>42 Hours</b>
--	-----------------

**Course outcomes:**

- Achieve Knowledge of Design and development of experimental skills.
- Understand the principles of design of experiments.

**Question paper pattern:**

- Individual experiments can be set as single experiment.
- All questions are to be framed such that they should relate to field.

**Text Books:**

1. "Pelczar, Chan and Krig, W.C, "**Microbiology**", Brown Publications.
2. Prescott and Dunn, "**Industrial Microbiology**", Macmillian.
3. Dany Spencer Adams, "**Lab Methodologies**", IK Intl.Pub house.
4. L.M. Prescott, Harley, Klein, (2002), "**Microbiology**" 5<sup>th</sup> edition, McGraw-Hill Higher Education.

**Reference Books:**

1. Chakraborty P, "**A Text book of Microbiology**" New Central Book Agency.
2. Ajit Kumar Banerjee, "**Fundamentals of Microbiology and Immunology**" CABI Publishing.

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

**Subject: Occupational Safety and Health Management**

Subject Code	16CWM21	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Know the Importance of Sector specific safety and risks.
- Observe and understand about biological and physical health hazards.
- To impart the knowledge of women safety, child labour.
- Observe and understand the Asbestosis, NIHL PFT.
- Know the importance of legislations in India, ESI Act.

Modules	Teaching Hours
<b>Module - 1</b>	
<b>Sector Specific Occupational Health and Safety Issues</b> – Health and safety risks in mining, Health hazards in electronics industry, food processing industry, textile industry, construction industry, wastewater treatment plants, solid waste landfills.	<b>10 Hours</b>
<b>Module - 2</b>	
<b>Health hazards and risk assessment</b> - Hazard and risk, biological, chemical, physical and psychological health hazards, health risk assessment and management. <b>Soico-Economic Aspects of Occupational Health and Safety</b> – women and Occupational Health and Safety, child labour. Occupational Health, health problems in unorganised sectors.	<b>10 Hours</b>
<b>Module - 3</b>	
<b>Occupational Diseases</b> (Health problems) - Asbestosis, Silicosis, Farmer's lung, Pneumoconiosis, Anthracosis, Bagassosis, Byssinosis, Tobacossis. <b>Health Screening Measures</b> – Stages of medical examination, occupational history, Pulmonary Function Test (PFT), Noise Induced Hearing Losses (NIHL).	<b>10 Hours</b>
<b>Module - 4</b>	
<b>Basics of Preventive Techniques</b> – Accident analysis, monitoring of hazards, reporting and investigation of accidents, prevention and control of accidents, ensuring safety measures.	<b>10 Hours</b>
<b>Module - 5</b>	
<b>Occupational health and safety legislations in India</b> – overview of existing OHS legislations in India, Factories act, Mining act, Workmen's compensation act, Employee's state insurance act, Present state of OHS legislation in India.	<b>10 Hours</b>

**Course outcomes:**

During this course, students will be trained :

- To understand the role and importance of Safety in various sectors.
- Understand the basics of health hazards.
- Learn the safety measures for women in unorganised sectors.
- To evaluate the occupation diseases like asbestosis, silicosis.
- Achieve knowledge about various legislation in India.

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

1. Goetsch D.L., (1999), “**Occupational Safety and Health for Technologists**”, Engineers and Managers”, Prentice Hall.
2. Heinrich H.W., “**Industrial Accident Prevention**”, McGraw Hill Publication , Newyork.
3. Colling D.A., “**Industrial Safety Management and Technology**”, Prentice Hall, New Delhi.

**Reference Books:**

1. National Safety Council and Associate (Data) Publishers Pvt. Ltd. (1991), “**Industrial Safety and Pollution Control Handbook**”.

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

**Subject: Hazardous Waste Management**

Subject Code	16CWM22	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Have sufficient knowledge on need and principles of risk assessment methodologies and tools.
- Provide detailed design aspects of the treatment, disposal and analytical methods of hazardous wastes

Modules	Teaching Hours
---------	----------------

**Module - 1**

**Introduction**, Definition – ignitability, corrosivity, reactivity, toxicity, Sources, Classification - Regulations for Hazardous Waste Management, case study – Stringfellow site.

**Hazardous Waste Characterization**- Designated Hazardous Wastes – Specific hazardous wastes, mixed wastes. Sampling and analysis.

**10 Hours**

**Module – 2**

**Waste Minimization and Resource Recovery** – Approaches, priorities in HWM, Development of a Waste Tracking System, Selection of waste Minimization Process, Case Studies.

**10 Hours**

**Module – 3**

**Transportation of Hazardous Waste** – requirements, containers, bulk and non-bulk transport, State and local regulations, Hazardous Substances Emergency Response.

**10 Hours**

**Module – 4**

**Physico-chemical, Chemical and Biological Treatment of hazardous waste.**

**Thermal treatment** – Incineration (Design, Chemistry, Stoichiometry, types of incinerators) and pyrolysis.

**10 Hours**

**Module – 5**

**Sanitary landfill** – Design approach, Leachate and Gaseous collection system. Facility siting and Process selection for treatment, Storage, Disposal facility (TSDF).

**Soil contamination and Site remediation** – bioremediation processes, monitoring of disposal sites.

**10 Hours**

**Course outcomes:**

During this course, students will be trained :

- Review of case studies with respect to risk identification, assessment and emergency preparedness.
- Identify the sources and describe characteristics of hazardous wastes.
- Enumerate on waste minimization and resource recovery techniques.

- Prepare the transportation protocol for safe transport of hazardous wastes.
- Propose and design the treatment methods including engineered land fill and containment.

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

1. Lehman, (1983), "**Hazardous Waste Disposal**", Plenum Press.
2. Lagrega M.D., Buckingham P.L., and Evans J.C., (1994), "**Hazardous Waste Management**", McGraw Hill International Edition.
3. Wentz C.A., (1989), "**Hazardous Waste Management**", McGraw Hill.
4. Dawson and Mercer, (1981), "**Hazardous Waste Management**", John Wiley.

**Reference Books:**

1. Fawcett, (1984), "**Hazardous and Toxic Materials: Safe Handling and Disposal**", John Wiley.
2. National Safety Council and Associate (Data) Publishers Pvt. Ltd., (1991), "**Industrial Safety and Pollution Control Handbook**"

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

**Subject: Transport Modelling of Aquatic Systems**

Subject Code	16CWM23	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- The course introduces both ecology and transport modelling of aquatic systems for students.
- It explains different ecosystems and their interactions through symbiotic and synergic relationships, reviews ecological indices and modes.
- It describes trophic levels of lakes, influence of nutrient loading and control measures for Eutrophication.
- Know the Importance of modelling in wastewater engineering.
- Observe and understand about data collection and analysis.
- To impart the knowledge of mixing zones in a river.
- Observe and understand the Eutrophication.
- Know the importance of ocean disposal of wastewater.

Modules	Teaching Hours
<b>Module -1</b>	
<b>Ecology</b> - Classification of Ecosystems, Structure and Function of Ecosystems, Energy flow in Ecosystems, Ecological Niche and succession, Biogeochemical cycles, Ecological Pyramids. System ecology and Ecosystem Modeling.	<b>10 Hours</b>
<b>Module – 2</b>	
<b>Aquatic and Terrestrial Ecosystems</b> - Diversity and dominance Indices, Ecosystem Models. Lake Ecosystem, Trophic levels, nutrient loading, nutrient enrichment, Leibig's Law, control of Eutrophication.	<b>10 Hours</b>
<b>Module – 3</b>	
<b>Modelling</b> – Introduction, Scope of modeling, Mass balances, waste load allocation, applications in environmental management. Model calibration and verification. Nature of inputs. Advection, Diffusion, Dispersion. Numerical examples of waste load allocation.	<b>10 Hours</b>
<b>Module – 4</b>	
<b>Steady-state water quality modelling</b> - models for conservative and non conservative substances, Numerical examples. <b>Data collection and analysis</b> - specialized water quality surveys, estimation of decay and reareation rates. Numerical examples based on decay and reareation rates. Streeter-Phelps equation derivation and numerical problems.	<b>10 Hours</b>

**Module – 5**

**Mixing zones in rivers** – types of outfalls and mixing regimes. Dissolved oxygen models for lakes under completely mixed and stratified conditions.

**Eutrophication models** – Stoichiometry, Phosphorus as limiting nutrient, Mass Balance on total phosphorus in lakes, Nutrient loading criteria, Numerical problems.

**Ocean disposal of wastewater** - Siting of outfalls.

**10 Hours****Course outcomes:**

During this course, students will be trained :

- Student will be able to Classify and discuss the structure and function of ecosystems.
- Describe symbiotic and synergic relationships.
- Illustrate the need for bio- geo- cycles. Apply ecosystem models.
- Describe the importance of modelling and its applications.
- To evaluate the data collection and analysis.
- Achieve knowledge mixing zones in rivers, Eutrophication.

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

1. Odum E.P. & Barret G.W., (2005), “**Fundamentals of Ecology**”, 5<sup>th</sup> Edition, Cengage Learning.
2. Schnoor J.L., “**Environmental Modelling – Fate and Transport of Pollutants in Water, Air and Soil**”, John Wiley and Sons.
3. Thomann R.V., and Mueller J.A., “**Principles of Water Quality Management and Control**”, Harper & Row Publications.

**Reference Books:**

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

**Subject: Industrial Effluent Treatment and Engineering**

Subject Code	16CWM24	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Understanding the Industrial effluent characteristics and their effects on environment.
- Understand treatment and disposal alternatives of the industrial wastewater.

Modules	Teaching Hours
---------	----------------

**Module - 1**

<p><b>Effects of Industrial Wastes</b> on sewerage system and sewage treatment plants and receiving water bodies. Effects of waste additions on physical and chemical properties of soil.</p> <p><b>Effluent standards and receiving water quality standards.</b> Different aspects and choices of various disposal alternatives.</p>	<p><b>10 Hours</b></p>
---	------------------------

**Module - 2**

<p><b>Industrial Waste survey</b>-Process flow charts, condition of waste stream. Material balance, Sampling – Grab, Composite and integrated samples. Continuous monitoring – pH, Conductivity, Bio-monitoring.</p>	<p><b>10 Hours</b></p>
--	------------------------

**Module - 3**

<p><b>Pre-treatment of Industrial Wastewater</b>-Volume reduction, Strength reduction, Neutralization, Equalization and Proportion, Removal of Organic and inorganic dissolved solids.</p>	<p><b>10 Hours</b></p>
--	------------------------

**Module - 4**

<p><b>Wastewater Treatment in specific industries:</b> Distillery, Sugar, Pulp and paper, Cement, Textile, Dairy, Fertilizer, Pesticides, Pharmaceutical.</p>	<p><b>10 Hours</b></p>
---	------------------------

**Module - 5**

<p><b>Design of complete treatment system &amp; disposal for industries:</b> Distillery, Dairy, Sugar Paper and Pulp mill to meet P.C.B. norms.</p> <p><b>Radio Active Wastes treatment</b>- Low activity and high activity radiation, application of radioactive techniques for wastewater treatment. <b>Bio-Remediation</b> of contaminated soils.</p>	<p><b>10 Hours</b></p>
--	------------------------

**Course outcomes:**

During this course, students will be trained :

- To understand the role and importance of industrial wastewater management.
- Understand the basics of treatment methodologies.

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

- “Wastewater Engineering - Treatment and Reuse”, Metcalf and Eddy Inc., (2003), 4th Edition, Tata McGraw Hill Publishing Co. Ltd., New Delhi.
- “Wastewater Treatment Concepts and Design Approach”, Karia G.L., and Christian R.A., (2001), Prentice Hall of India Pvt. Ltd., New Delhi.
- "Wastewater Treatment", Rao M.N., Datta A.K., (2008), 3rd edition, Oxford & IBH Publishing Co. New Delhi.

**Reference Books:**

**SYLLABUS FOR M Tech. WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – II

**Subject: Integrated Solid Waste Management**

Subject Code	16CWM251	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Gain insight into the collection, transfer, and transport of municipal solid waste.
- Understand the design and operation of a municipal solid waste landfill.
- Understand the design and operation of a resource recovery facility.
- Understand the design and operation of a waste-to-energy facility.

<b>Modules</b>	<b>Teaching Hours</b>
<b>Module - 1</b>	
<p><b>Introduction:</b> Day-day solid waste management and social issues, scope and importance of solid waste management, classification and magnitude of the problem, functional elements.</p> <p><b>Solid Waste:</b> Sources of generation, classifications, characterization and quantification, municipal industrial and bio-medical waste, estimation of moisture content and density of a solid waste, design examples.</p>	<b>10 Hours</b>
<b>Module – 2</b>	
<p><b>Transfer and Transport:</b> Collection services and collections systems, collection equipment, transfer stations, collection route optimization.</p> <p><b>Processing Techniques:</b> Processing methodologies and waste minimization, recovery, recycle and reuse (3R) of materials from solid waste, volume and size reduction, biological processing.</p>	<b>10 Hours</b>
<b>Module – 3</b>	
<p><b>Treatment Methodologies :</b> Composting- aerobic and aerobic process, incineration, pyrolysis and energy recovery.</p> <p><b>Ultimate Disposal:</b> Significance of refuse disposal and management, impact of open land dumping site selection, sanitary land, filing, design criteria and design examples. Leachate and gas collection system leachate treatment.</p>	<b>10 Hours</b>
<b>Module – 4</b>	
<p><b>Hazardous waste:</b> Identification of Hazardous waste, classification, treatment and disposal techniques – biomedical, radioactive and chemical industries.</p>	<b>10 Hours</b>
<b>Module – 5</b>	
<p><b>Recent Developments and Role of Various Organizations:</b> Power generation, energy recovery, blending with</p>	<b>10 Hours</b>

construction materials, governmental, non-governmental activities and roles under solid waste management.

**Course outcomes:**

During this course, students will be trained :

- Apply the basic scientific and sustainability principles behind waste management, for solving practical waste management challenges.
- Adopt the role on policy driver's play in stakeholders' response to the waste and resource management challenge within a circular economy.
- Know the principles of existing and emerging technologies for the treatment of waste and recovery of value from wastes.

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

- **Integrated Solid Waste Management** - Engineering Principles and Management Issues, Tchobanoglous/Theisen/Vigil, McGraw Hill (1993)
- Mantell C.L., (1975), "**Solid Waste Management**", John Wiley.

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

**Subject: Industrial Waste Pollution and Control**

Subject Code	16CWM252	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Understand the industrial process, water utilization and waste water generation
- Characteristics of industrial waste water and treatment options of industrial waste water
- Characteristics of industrial noise pollution

Modules	Teaching Hours
---------	----------------

**Module - 1**

INTRODUCTION Industrial scenario – Uses of Water by industry – Sources and types of industrial wastewater – Industrial wastewater disposal and environmental impacts – Reasons for treatment of industrial wastewater – Regulatory requirements – Industrial waste survey – Industrial wastewater generation rates, characterization and variables – Population equivalent – Toxicity of industrial effluents and Bioassay tests – Preventing and minimizing wastes at the source – Individual and Common Effluent Treatment Plants – Joint treatment of industrial wastewater.

**10 Hours**

**Module – 2**

INDUSTRIAL WATER POLLUTION CONTROL AND TREATMENT  
Sources and characteristics of industrial wastewater, effects on environment. Standards related to industrial wastewater. Waste volume reduction, waste strength reduction, neutralization, equalization and proportioning. Advanced wastewater treatment. Industry specific wastewater treatment for chloro- alkali, electroplating, distillery, tannery, pulp and paper, fertilizer, etc. Treatment technology of coal washery and coke oven effluents. Acid mine drainage: occurrence, effects and treatment technologies. Equalization – Neutralization – Oil separation – Flotation – Precipitation – Heavy metal Removal – Refractory organics separation by adsorption – Aerobic and anaerobic biological treatment – Sequencing batch reactors – High Rate reactors. Chemical oxidation – Ozonation – Photocatalysis – Wet Air Oxidation – Evaporation – Ion Exchange – Membrane Technologies – Nutrient removal – Land Treatment.

**10 Hours**

<b>Module – 3</b>	
AIR POLLUTION CONTROL SYSTEM DESIGN Review of general principles of air pollution control. Design and operation of gravity settling chambers. Design and operation of cyclones. Design and operation of wet dust scrubbers – column scrubbers, jet scrubbers, vortex scrubbers, rotating disc scrubbers, and venturi scrubbers. Design and operation of fabric filters. Design and operation of electrostatic precipitators design and operation of mist separators baffled mist separators, pressure separators. Dust control and abatement measures in mines; role of green belts. Control devices for gaseous pollutants with special emphasis on adsorption, absorption, mass transfer, condensation, and combustion. Control of motor vehicle emissions. Indoor air pollution control.	<b>10 Hours</b>
<b>Module – 4</b>	
NOISE CONTROL ENGINEERING Noise measurement techniques and analysis: Worksite, ambient and road transport. Noise prediction and modelling, noise impact assessment: Scultz Fractional Impact method; Value function curves. Noise abatement measures - Sound absorption, Acoustic barrier, Vibration Isolation, Vibration damping, Muffling, personal protector and green belt-- principles and design considerations. Noise pollution and management in Mines, Washeries, Power plants, Fertilizer plants, Cement plants, etc. Human Vibrationwhole body vibration problems in opencast mines, health effects and control measures. Ground vibration and air blast, Environmental and health effects; strategic control and abatement measures	<b>10 Hours</b>
<b>Module – 5</b>	
CASE STUDIES Industrial manufacturing process description, wastewater characteristics and waste treatment flow sheet for Textiles – Tanneries – Pulp and paper – metal finishing – Petroleum Refining – Chemical industries – Sugar and Distilleries –Dairy – Iron and steel – fertilizers – Industrial clusters and Industrial Estates	<b>10 Hours</b>
<b>Course outcomes:</b> During this course, students will be trained : <ul style="list-style-type: none"> <li>• Analyze the waste water from different industries</li> <li>• Design suitable units for industrial waste water treatment</li> <li>• Select the suitable residue disposal options</li> <li>• Select a suitable method for reducing the noise pollution</li> </ul>	
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> </ul>	

- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

- Eckenfelder, W.W., (1999) "Industrial Water Pollution Control", Mc-Graw Hill.
- Arceivala, S.J., (1998) "Wastewater Treatment for Poll. Control", Tata McGraw Hill.

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – II

**Subject: Environmental Impact Assessment**

Subject Code	16CWM253	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Identify environmental attributes for the EIA study.
- Identify methodology and prepare EIA reports.
- Specify methods for prediction of the impacts.
- Formulate environmental management plans.

<b>Modules</b>	<b>Teaching Hours</b>
<b>Module - 1</b>	
Introduction: The Need for EIA, Indian Policies Requiring EIA , The EIA Cycle and Procedures, Screening, Scoping, Baseline Data, Impact Prediction, Assessment of Alternatives, Delineation of Mitigation Measure and EIA Report, Public Hearing, Decision Making, Monitoring the Clearance Conditions, Components of EIA, Roles in the EIA Process. Government of India Ministry of Environment and Forest Notification (2000), List of projects requiring Environmental clearance, Application form, Composition of Expert Committee, Ecological sensitive places, International agreements.	<b>10 Hours</b>
<b>Module – 2</b>	
Identifying The Key Issues: Key Elements of an Initial Project Description and Scoping, Project Location(s), Land Use Impacts, Consideration of Alternatives, Process selection: Construction Phase, Input Requirements, Wastes and Emissions, Air Emissions, Liquid Effluents, Solid Wastes, Risks to Environment and Human, Health, Socio- Economic Impacts, Ecological Impacts, Global Environmental Issues.	<b>10 Hours</b>
<b>Module – 3</b>	
EIA Methodologies: Criteria for the selection of EIA methodology, impact identification, impact measurement, impact interpretation & Evaluation, impact communication, Methods-Adhoc methods, Checklists methods, Matrices methods, Networks methods, Overlays methods, Environmental index using factor analysis, Cost/benefit analysis, Predictive or Simulation methods. Rapid assessment of Pollution sources method, predictive models for impact assessment, Applications for RS and GIS	<b>10 Hours</b>
<b>Module – 4</b>	
Reviewing The EIA Report: Scope, Baseline Conditions, Site	<b>10 Hours</b>

<p>and Process alternatives, Public hearing. Construction Stage Impacts, Project Resource Requirements and Related Impacts, Prediction of Environmental Media Quality, Socio-economic Impacts, Ecological Impacts, Occupational Health Impact, Major Hazard/ Risk Assessment, Impact on Transport System, Integrated Impact Assessment.</p>	
<p><b>Module – 5</b></p>	
<p>Review Of EMP And Monitoring: Environmental Management Plan, Identification of Significant or Unacceptable Impacts Requiring Mitigation, Mitigation Plans and Relief &amp; Rehabilitation, Stipulating the Conditions, What should be monitored? Monitoring Methods, Who should monitor? Pre-Appraisal and Appraisal.</p> <p><b>Case Studies:</b> Preparation of EIA for developmental projects- Factors to be considered in making assessment decisions, Water Resources Project, Pharmaceutical industry, thermal plant, Nuclear fuel complex, Highway project, Sewage treatment plant, Municipal Solid waste processing plant, Tannery industry.</p>	<p><b>10 Hours</b></p>
<p><b>Course outcomes:</b> During this course, students will be trained :</p> <ul style="list-style-type: none"> <li>• Student will be able to Classify and discuss the structure and function of ecosystems.</li> <li>• Describe symbiotic and synergic relationships.</li> <li>• Illustrate the need for bio- geo- cycles. Apply ecosystem models.</li> </ul>	
<p><b>Question paper pattern:</b></p> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – II

**Subject: Environmental Planning and Management**

Subject Code	16CWM254	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Understand the management and to apply the skills of the management when they become an entrepreneur

Modules	Teaching Hours
---------	----------------

**Module -1**

**Management**

Introduction – Meaning – nature and characteristics of Management, Scope and functional areas of management– Management as a science, art or profession – Management & Administration – Roles of Management, Levels of Management, Development of Management Thought – early management approaches – Modern management approaches  
Planning Nature, importance and purpose of planning process – objectives – Types of plans (Meaning only) – Decision making – Importance of planning – steps in planning & planning premises – Hierarchy of plans.

**10 Hours**

**Module – 2**

**Organizing and Staffing**

Nature and purpose of organization – principles of organization – Types of organization – Departmentation – Committees – Centralization Vs Decentralization of authority and responsibility – Span of control – MBO and MBE (Meaning only) Nature and importance of Staffing – Process of Selection & Recruitment (in brief).

**Directing & Controlling** -Meaning and nature of directing – Leadership styles, Motivation Theories, Communication – Meaning and importance – Coordination, meaning and importance and Techniques of Coordination. Meaning and steps in controlling – Essentials of a sound control system – Methods of establishing control (in brief).

**10 Hours**

**Module – 3**

**Entrepreneurship**

Meaning of Entrepreneur, Evolution of Concept, Functions of Entrepreneur, Types of Entrepreneur, Entrepreneur – an emerging class. Concept of Entrepreneurship – Evolution of Entrepreneurship, Development of Entrepreneurship, Stages in entrepreneurial process, Role of Entrepreneurs in Economic Development; Entrepreneurship in India;

**10 Hours**

Entrepreneurship – its Barriers.	
<b>Module – 4</b>	
<b>Small Scale Industry</b> Definition; Characteristics; Need and rationale : Objectives, Scope, role of SSI in Economic Development. Advantages of SSI. Steps to start an SSI – Government policy towards SSI, Different Policies of SSI., Government Support on SSI., during 5 year plans. Impact of Liberalization, Privatisation, Globalization on SSI. Effect of WTO / GATT Supporting Agencies of Government for SSI Meaning. Nature of support; Objectives; Functions; Types of Help; Ancillary Industry and Tiny Industry (Definition only).	<b>10 Hours</b>
<b>Module – 5</b>	
Preparation of Project, Meaning of Project, Project Identification, Project Selection, Project Report, Need and significance of Project, Contents, formulation, Guidelines by Planning Commission for Project Report, Network Analysis, Errors of Project Report, Project Appraisal. Identification of Business Opportunities. Market Feasibility Study : Technical Feasibility Study, Financial Feasibility Study & Social Feasibility Study	<b>10 Hours</b>
<b>Course outcomes:</b> During this course, students will be trained : <ul style="list-style-type: none"> <li>• Identify, select a suitable Project</li> <li>• Write a Project Report, with formulation and understand the Guidelines by Planning Commission for Project Report.</li> <li>• Become a Entrepreneur</li> </ul>	
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<b>Text Books:</b> <ul style="list-style-type: none"> <li>• Principles of Management – P.C. Tripathi, P.N. Reddy, Tata McGraw Hill,</li> <li>• Dynamics of Entrepreneurial Development &amp; Management – Vasant Desai, Himalaya Publishing House.</li> <li>• Entrepreneurship Development – Small Business Enterprises – Poornima M. Charantimath – Pearson Education – 2006 ( 2&amp;4).</li> </ul>	
<b>Reference Books:</b> <ul style="list-style-type: none"> <li>• Management Fundamentals – Concepts, Application, Skill Development – Robert Lusier – Thomson .</li> <li>• Entrepreneurship Development – SS Khanka – S Chand &amp; Co.</li> <li>• Management – Stephen Robbins – Pearson Education / PHI – 17th Edition, 2003.</li> </ul>	

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]  
SEMESTER – II

**Subject: Environmental Laboratory 2**

Subject Code	16CWML26	IA Marks	20
Number of Lecture Hours/Week	03	Exam Marks	80
Total Number of Lecture Hours	42	Exam Hours	03

CREDITS – 02

**Course objectives:** This course will enable students to

- The objective of this course is to make students to learn principles and design of experiments.
- To investigate the performance of various Soils

Modules	Teaching Hours
---------	----------------

**Module -1**

- Determination of Solids in wastewater: Total Solids, Suspended Solids, Dissolved Solids, Volatile Solids, Fixed Solids, Settleable Solids.
- Determination of Dissolved Oxygen and BOD.
- Determination of COD.
- Determination Nitrates by spectrophotometer.
- Determination of Alkalinity, Acidity and pH.
- Determination of Fats, oils and greases.
- Determination of Chlorides and Sulphates.

**42 Hours**

**Course outcomes:**

- Achieve Knowledge of Design and development of experimental skills.
- Understand the principles of design of experiments.

**Question paper pattern:**

- Individual experiments can be set as single experiment.
- All questions are to be framed such that they should relate to field.

**Text Books:**

- **Manual of Water and Wastewater Analysis** – NEERI Publication.
- **Standard Methods for Examination of Water and Wastewater**, American Publication.
- Association, Water Pollution Control Federation, American Water Works Association, Washington DC.

**Reference Books:**

- **BIS Standards** : 2490-1974, 3360-1974, 3307-1974.
- **Chemistry for Environment Engineering**. Sawyer and Mc Carty.

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

**SEMESTER – IV**

**Subject: Atmospheric Air Pollution and Control**

Subject Code	16CWM41	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Know the Importance of Air Pollution from industries and its Effects.
- Study on Meteorological factors used to measure air Pollutants.
- Selection of Site for Industrial Zones in urban areas.
- To know the Industrial plant location during City Planning.
- To impart the knowledge on effect of Air pollution from major Industries.
- Study on impact of Air pollution and to know the Economic losses.
- Study on Air pollution control Equipments to control Particulate matter and Gaseous pollutants.
- Know the importance of Noise pollution from Industries and its control.

<b>Modules</b>	<b>Teaching Hours</b>
<b>Module - 1</b>	
<p><b>Introduction-</b> Air Pollution, Characterisation of Atmospheric Air Pollutants, Primary and Secondary Pollutants. Major Air Pollution Disasters of Environmental importance, Bhopal Gas Tragedy.</p> <p><b>Meteorology</b> – Measurement of Meteorological factors in dispersion of Air pollutants, Solar Radiation, Atmospheric Lapse Rates, Wind speed and direction recording devices, Construction of Wind Rose diagram for industrial stacks. Maximum Mixing Depth (MMD), Temperature Inversions.</p>	<b>10 Hours</b>
<b>Module – 2</b>	
<p><b>Industrial Plant Location and City Planning</b> – Selection of site for Industrial Plant Location. Industrial Stack Emissions and Plume behaviour, measurement of Smoke Density from Industrial Stacks and Control methods. Heat Island Effect in Urban areas.</p>	<b>10 Hours</b>
<b>Module – 3</b>	
<p><b>Effect of Air Pollution from major Industries</b> – Study on Air pollution from major industries: Cement Industry, Stone Crushers and Petroleum Refineries. Health effects, Effect on plants and Economical Losses. Green House Effect, Acid Rain, Global Warming, Photo-chemical Smog, Indoor Air Pollution, Occupational diseases.</p>	<b>10 Hours</b>
<b>Module – 4</b>	
<p><b>Air Pollution Control Equipments-</b> Air pollution control equipments for particulate matter- working principle and</p>	<b>10 Hours</b>

field applications on Gravity Settling Chambers, Centrifugal Collectors, Wet Collectors, Fabric filters and Electrostatic precipitators (ESP). Control methods for Gaseous Pollutants- Adsorption, Absorption and Combustion Process.	
<b>Module – 5</b>	
<b>Noise Pollution and Control in Industries</b> - Sources, Noise measuring equipments, effects and Occupational hazards. Standards, Noise mapping, Control measures in Industrial establishments-Administrative controls, Engineering Controls and Personnel protections.	<b>10 Hours</b>
<b>Course outcomes:</b> During this course, students will be trained : <ul style="list-style-type: none"> <li>• To understand the role and importance of Air pollution and its control technology in the present environmental system.</li> <li>• Understand the basics on Meteorology and importance of wind.</li> <li>• Learn to Control and Measurement of Air pollutants using Specific devices.</li> <li>• To evaluate the effect of Air pollutants on Health and Economical losses.</li> <li>• Achieve knowledge about Global Warming, Acid rain, etc.. from major industrial activities in urban areas including Noise Pollution.</li> </ul>	
<b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<b>Text Books:</b> <ul style="list-style-type: none"> <li>• Colls, J., <b>Air Pollution: Measurement, Modeling and Mitigation</b>, CRC Press, 2009.</li> <li>• Noel, D. N., <b>Air Pollution Control Engineering</b>, Tata McGraw Hill Publishers, 1999.</li> <li>• Stern, A.C., <b>Fundamentals of Air Pollution</b>, Academic Press, 1984.</li> </ul>	
<b>Reference Books:</b> <ul style="list-style-type: none"> <li>• Wark K., Warner C.F., and Davis W.T., (1998), <b>“Air Pollution - Its Origin and Control”</b>, Harper &amp; Row Publishers, New York.</li> <li>• Lee C.C., and Lin S.D., (1999), <b>“Handbook of Environmental Engineering Calculations”</b>, McGraw Hill, New York.</li> <li>• Perkins H.C.(1974), <b>“Air Pollution”</b>, McGraw Hill.</li> <li>• Crawford M.,(1976) <b>“Air Pollution Control Theory”</b>, TATA McGraw Hill.</li> <li>• Stern A.C., <b>“Air Pollution”</b>, Vol I, II, III.</li> <li>• Seinfeld N.J., (1975), <b>“Air Pollution”</b>, McGraw Hill.</li> <li>• Stern A.C.(1968), Vol. V, <b>“Air Quality Management”</b>.</li> </ul>	

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

**SEMESTER – IV**

**Subject: Instrumentation Techniques in Environmental Engineering**

Subject Code	16CWM421	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- To analyse the quality standards.
- To use the appropriate instruments and minimize the errors.

Modules	Teaching Hours
---------	----------------

**Module - 1**

Treatment of Data in Quantitative Analysis - Accuracy, Precision, Standard deviation, Types of errors, Minimization of errors. Significant figures, Criteria for rejection of data, Principles of instrumentation.	<b>10 Hours</b>
--	-----------------

**Module - 2**

<b>Spectrophotometric Methods</b> - Principles, applications, advantages & limitations of the following Spectrophotometric methods: Colorimetry & Spectrophotometry, FTIR, NMR, Atomic absorption spectrophotometry, Flame photometry, Fluorimetry, Nephelometry and Turbidimetry, Inductively coupled plasma spectroscopy & Mass spectroscopy.	<b>10 Hours</b>
---	-----------------

**Module - 3**

<b>Electrochemical Methods</b> - Principles, applications, advantages & limitations of following electrochemical methods: Polarography, Pulse polarography, Ionselective electrode oscilloscopic polarography, cyclic voltametry & anode stripping voltametry	<b>10 Hours</b>
---	-----------------

**Module - 4**

<b>Chromatography</b> - Principles, applications, advantages & limitations of following chromatographic methods: Adsorption, Partition, Column chromatography, Paper chromatography, Thin layer chromatography, Gas chromatography, High Performance Liquid Chromatography (HPLC), Ion-chromatography & size exclusion chromatography	<b>10 Hours</b>
---	-----------------

**Module - 5**

<b>Physical and Biological Methods</b> - Analytical methods in Biotechnology & bio-process control, Electrophoresis, X-ray crystallography, Bio-informatics tools, Bio-assay of pharmaceutical products, online & off line measurement systems, micro processor based control systems.	<b>10 Hours</b>
--	-----------------

**Course outcomes:**

During this course, students will be trained:

- To measure the pollution level in waste water
- To understand the effect of level of micro-organisms present in the waste water
- To evaluate the hazardousness of the polluted medium

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

1. Instrumental Methods of analysis, Willard H H& Dean LL, John Willey, 1976.
2. Modern Methods of chemical analysis Reesok RL, & Shields LD, John Willey & sons, Inc 1990.
3. Instrumental Methods of chemical analysis, Ewing GW, McGraw Hill Book Company, Inc. 1975.

**Reference Books:**

1. Fundamental of molecules spectroscopy. Banwell CN, McGraw Hill, NY, 1990.

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

**SEMESTER – IV**

**Subject: Energy Systems and Environmental Resources**

Subject Code	16CWM422	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Energy and environment management in building.
- Know the new Technologies for low energy buildings.

Modules	Teaching Hours
---------	----------------

**Module - 1**

**Introduction:** Global Energy balance, environmental resources necessity and Energy crises, Energy use pattern in India: Energy consumption needs, Energy/sources renewable and non renewable and availability.

**Fossil Fuels:** Fossil Fuels classification, composition, physico-chemical characteristics, Energy content of coal. Petroleum and natural Gasformation, exploration, mining and uses of coal, oil and natural gas. Environmental problems associated with exploration, mining, processing, transportation and uses

**10 Hours**

**Module - 2**

**Bio-Energy:** Bio-Mass composition and types, conversion process pyrolysis charcoal production, compression, classification and liquefaction. Biogas production and uses, Anaerobic digestion classification of Bio-gas plants. Energy from solid waste sources types, energy production.

**10 Hours**

**Module - 3**

**Solar Energy:** Physical Principles of conservation of Solar radiation harnessing of Solar Energy, solar collectors, Solar thermal Energy, Solar Electricity Generation, Solar Heaters, Dryers and cookers, photo voltaic

**10 Hours**

**Module - 4**

**Tidal Energy:** OTEC (Ocean Thermal Electric Conversion), methods of ocean thermal electric power generation, site selection. Energy from tides-basic principles of tidal power, components of tidal plant.

**10 Hours**

**Module - 5**

**Nuclear Energy:** Nuclear Fuels- Mining & processing of Uranium. Fission and fusion concepts of necessity, general component of nuclear reactors, different types of reactors, breeding reactor's location of NPP, disposal of Nuclear waste environmental effects

**10 Hours**

**Course outcomes:**

During this course, students will be trained :

- Analyse the data obtained from the field
- Develop an appropriate methods to solve logically and optimize the test or field results

**Question paper pattern:**

- The question paper will have ten questions.
- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

1. Mathur, A.N., and Rathore, N.S., “**Renewable Energy and Environment**” –Proceedings of the National Solar Energy, Himanshu Publications, Udaipur.
2. Rao and Parulekar B.B., (1977), “**Energy Technology–Non-conventional, Renewable and Conventional**”, 2<sup>nd</sup> Edition, Khanna Publishers.
3. Rai, G.D , “**Non-conventional Energy Sources**”, Khanna Publications.

**Reference Books:**

1. Saha, H., Saha, S.K., and Mukherjee, M.K., (1990), “**Integrated Renewable Energy for Rural Development**”, Proceedings of the National Solar Energy Convention, Calcutta, India,
2. Wilber, L.C., (1989), “**Handbook of Energy Systems Engineering**”, Wiley and Sons.
3. The Energy Research Institute (TERI) Publications, New Delhi.
4. Ministry of Environment and Forests, Government of India, Annual Reports.

**SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

**SEMESTER – IV**

**Subject: Hydraulics of Water and Waste Water Systems**

Subject Code	16CWM423	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- Formulate momentum, energy and mass transport models
- Solve diffusion-dispersion equations
- Apply basic flow equations for steady and unsteady flows in open channels

Modules	Teaching Hours
<b>Module - 1</b>	
<p><b>Water Supply System</b> – Introduction – types of systems, population forecasting methods of water demand, pressure, design period, pipe materials and roughness coefficient.</p> <p><b>Storage Reservoirs</b> – Need, different types, capacity determination and evaluation of pumping systems.</p> <p><b>Pipe Networks</b> – Peak factors for intermittent and continuous distribution system. Branch and Grid Iron systems. Nodal demand, Design Layouts of distribution systems, Evaluation of distribution system.</p>	<b>10 Hours</b>
<b>Module – 2</b>	
<p>Basic concepts of open channel flows, conservation laws, continuity equation, momentum equation, Application of momentum and energy equations. Critical flow, its properties and application; location of critical flow and its computation</p> <p>Uniform flow, flow resistance, equations of flow resistance, computation of normal depth, Gradually varied flow, governing equations classification of water surface profiles.</p>	<b>10 Hours</b>
<b>Module – 3</b>	
<p>Hydrologic cycle and its interaction with human activity, Hydrologic processes, Hydrologic analysis, Hydrologic statistics. Transport processes, diffusion phenomena, Fick's 1<sup>st</sup> and 2<sup>nd</sup> Laws of diffusion, Advection diffusion equation, Turbulent diffusion and dispersion mixing in rivers Porous medium flow, Approximation of Dupuit, Contaminant transport, Saltwater intrusion into aquifers, Non aqueous phase liquid (NAPL) in groundwater, aspects of numerical modeling.</p>	<b>10 Hours</b>
<b>Module – 4</b>	
<p><b>Water Quality in Distribution System</b> – factors affecting water quality, predictive tools and intermediate disinfection.</p> <p><b>Wastewater Collection System</b> – Separate and Combined</p>	<b>10 Hours</b>

Sewer Systems, relevant equations for flow conditions, pipe materials and roughness coefficient, design guidelines and examples. Sewer Appurtenances.	
<b>Module – 5</b>	
<p><b>Sewer Network</b> – Estimation of Nodal Flows, Pumping Stations, Evaluation of Different Network Options.</p> <p><b>Storm Sewers</b> – flooding and water quality problems, run-off calculations, storm water inlets, open drains and sewer pipes and design for different layouts.</p>	<b>10 Hours</b>
<p><b>Course outcomes:</b>  During this course, students will be trained :</p> <ul style="list-style-type: none"> <li>• solve basic equations of flow through porous medium</li> <li>• formulate forecast models for operation of hydrologic systems.</li> </ul>	
<p><b>Question paper pattern:</b></p> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question consists of 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub questions covering all the topics under a module.</li> <li>• The students will have to answer 5 full questions, selecting one full question from each module.</li> </ul>	
<p><b>Text Books:</b></p> <ul style="list-style-type: none"> <li>• Sincero A.P., and Sincero G.A., (1999), “<b>Environmental Engineering – A Design Approach</b>”, Prentice Hall of India Pvt. **SYLLABUS FOR M Tech., WASTE WATER MANAGEMENT, HEALTH & SAFETY ENGINEERING**

[As per Choice Based Credit System (CBCS) scheme]

**SEMESTER – IV**

**Subject: Human impact on Marine and Coastal Environment**

Subject Code	16CWM424	IA Marks	20
Number of Lecture Hours/Week	04	Exam Marks	80
Total Number of Lecture Hours	50	Exam Hours	03

CREDITS – 04

**Course objectives:** This course will enable students to

- To provide students understanding of the materials and processes associated with the major natural geo-hazards: floods, earthquakes, volcanic activity, landslides, and coastal hazards.

Modules	Teaching Hours
---------	----------------

**Module - 1**

Estuaries and Saltwater Marshes – Adaptations of Estuarine and Saltwater Organisms – Seagrass Ecosystem – Mangrove Ecosystem – Barrier Islands, Biogeography – Coral Reefs and Atolls – Open Ocean – Marine Benthos and Tidal Communities – Human Impact on the Marine Environment.	<b>10 Hours</b>
---	-----------------

**Module – 2**

<b>COASTAL HAZARD:</b> What is a Coastal Hazard? – Natural vs. Man-made hazard - Cyclones, Coastal Erosion, Tsunami, Flood, Storm surges, Sea Level Rise and Others – Impacts on Natural and Human environment.	<b>10 Hours</b>
---	-----------------

**Module – 3**

THE HUMAN COAST The Human Coast - Governance of the Coast: Institutions, Policy and Jurisdictions – Technological Hazards - Biological and Anthropogenic Coastal Hazards - Hazards and Disasters; Definition, Causes, Effects, Differences and their relationship to each other.	<b>10 Hours</b>
--	-----------------

**Module – 4**

CASE STUDIES Examples – Case Studies – Lessons Learnt – Preparing for the Future growth.	<b>10 Hours</b>
--	-----------------

**Module – 5**

COASTAL HAZARD MANAGEMENT Ethical Dimensions - Competing Values - Growth Management: tools, plans, principles – Mitigation: Definition, approaches, types and examples - Coastal Hazards Management Framework - Hazard Mitigation Planning.	<b>10 Hours</b>
---	-----------------

**Course outcomes:**

During this course, students will be trained :

- To be able to discuss the ability to predict and manage these hazards based on case studies to demonstrate the intensity and management options for all the natural hazards under consideration.

**Question paper pattern:**

- The question paper will have ten questions.

- Each full question consists of 16 marks.
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

**Text Books:**

- Barnes, R.S.K. and Hughes, R.N.. Introduction to Marine Ecology, 3rd ed., Blackwell Publishing, 1999.
